VOLVME CXXV

JVLY-DEC 1923

THE BVILDER

AN : ILLUSTRATED : WEEKLY JOURNAL : FOR : THE : ARCHITECT : AND : CONSTRUCTOR.

"EVERY man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kind of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned." - - - - - - - -

"Architecture can want no commendation, where there are noble men, or noble mindes."

—SIR HENRY WOTTON.

"OUR English word TO BUILD is the Anglo-Saxon Byldan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—DIVERSIONS OF PURLEY. - - - - -

"ALWAYS be ready to speak your mind, and a base man will avoid you."—WILLIAM BLAKE. - -

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXV.—No. 4196. JULY 6, 1923

THE PRESERVATION OF HISTORIC HOUSES.

THE methods of preservation to be applied to ancient monuments are now better understood, and the repairs carried out with the least possible violation of their ancient character. This should remind us of the equal responsibility to secure that the same appreciative care is applied to the great houses of historic and architectural interest now passing out of the hands of their hereditary owners, in some cases to become public property. For this is a matter not only affecting the locality becoming possessed of them but, as part of the national inheritance, one in which we are all concerned; so that it should not be left entirely for the locality, however public-spirited, to carry out changes or additions to such buildings without previous consultation with those best able to advise them—and there are now many well-informed sources to which they can look for help. Commercial appreciations are more likely uppermost in many local authorities than artistic ones, and it may seem to them that in paying a good price and depending on local knowledge only they have done all that is necessary. Under the changed conditions resulting from the war, not one or two, but many ancient historic houses are falling into the market, in certain cases as bequests to societies—as in the instance of Sulgrave Manor—or to become the property of the locality in which they are situated.

Houghton Towers, to which Professor Richardson calls attention in a letter we give on p. 6, is in danger of destruction, and in such circumstances it appears to us that the First Commissioner of Works might well intervene and carry out the provisions of the 1913 Act—and we could mention other cases. We fully recognise the difficulty of finding the kind of security required, and do not suggest any way as infallible. Only when a nation is held together by a tradition powerful enough to bind its work together does the present flow in orderly progress from the past, and we could wish that the nation were thus so happily endowed, that the thousand alternatives—the experts, committees and multifarious organisations whom lack of this more inspired endowment can do so little—were not now left the fragile security to take its place. Life moves in beauty where a people seek the best things in the best way. In such a case additions or alterations to existing buildings follow a natural course, the aim inspiring them being the same—as Early English followed Norman, to be followed by other succeeding styles. But the ancient England is gone, and industrial England is not in such harmonious relation to the past that the one grows undisturbedly out of the other. It is the peril and insecurity of the time that it does not do so. We are not preaching here any doctrine of sterility, but recognising that the aims of an industrial England have superseded more ancient and different ones, have familiarised us with utilitarian methods and to drastic changes in the handling of materials, because the machine has so much replaced the hand. This is not the whole story, and architecture can claim to dispute this industrial intervention with buildings of dignity as well as use, while we may see evidence of a return from unenlightened economic shibboleths to sounder religious beliefs.

Lest there should appear some contradiction in arguing at the same time in favour of opposites—for public responsibility and freedom from control as against over-dependence on machinery—we would point out that these opposites resolve themselves into a unity where there is the respect for knowledge outside our own and belief in the value of counsel, fortifying ourselves through the co-operation of other minds, instead of despising what we do not understand. Were this to be granted, the less interference and control the better. But local pride is forgetful of any higher claims than its own will, much harm is entailed, and this is sometimes seen in the case of historic houses becoming public property. Municipalities and public bodies are not usually composed of artists, nor are they always furnished with the kind of experience to entitle them in the case of these historic buildings "to do what they like with their own." Do we not recall the instance of a fine old house and park acquired for the locality as a public building and recreation ground, attached to which was a brick-built building of delightful character, which we came one day to find nearly destroyed and the beautiful Dutch tiles which lined the whole interior from floor to roof being brought down in showers of fragments by the house-breakers?

If the public interest compels us to challenge as unsuitable the character of the alterations being made to a home of historic interest, we have only in mind to labour the necessity of some outside reference before such changes are made, not to criticise individuals. And a visit to Temple Newsam at the present time fills us with apprehension. This famous seventeenth-century seat has recently been acquired by the City of Leeds, and the alterations now in progress there compel us to consider the need of a greater security which would be secured by means of such reference. We seem to recall that on the public occasion when the house was handed over to have read much talk of the "zealousy to preserve the amenities," to do nothing which would "detract from the glory," &c. But what are we to say when instead of keeping industrial Leeds away from Temple Newsam, we find Leeds brought to it—whole buildings and other additions being erected in a hard-faced machine brick of ugly colour? Was it not advisable at least to have secured a hand-made brick of similar character to that used for the house itself? Nor do we see the justification for violating the appearance of what would appear to be the stable entrance with additions in this same alien material! A correspondent writing on the subject says: "The design of these additions also appears to disregard the style of the surroundings and to deface the previously undisturbed charm of the buildings. Nor in such an instance can the inconsiderable extra cost of working in accordant materials justify the neglect to use them." We do not suggest any such reason as animating the authorities in their failure to do so; we do not discredit the aim, but challenge the experience. But when the Corporation took over the property they also took over a responsibility in acquiring it.

We dwell on the matter with the more anxiety because other such historic houses are passing from their original owners, and we have to foresee the danger to such buildings if there is not some better security than is included in an unfettered local control, and it has to be considered whether in the case of ancient buildings a reference to some outside consultative authority ought not to be made before any changes are proceeded with. We do not regard the matter as one easy of solution at all, nor is there any patent medicine conducing to certain remedy, as we have already pointed out. The less control and curbing of local initiative, or any other for that matter, the better, but we may seek counsel without fetters, and fortify our labour from the best minds. It is an appeal only to a more shared life and communal spirit, and we have fortunately the means of reference and advice in a direction where experience shows it can be capably given. We refer to the First Commissioner of Works and the Department which deals with ancient monuments. Before such additions were made at Temple Newsam their advice should have been requested, or reference made to some other better services of information than has apparently been the case.

We distinguish a good deal between repairs and the addition of new work, but where additions are to be made it is safer to work closer on the lines of the old unless there is some commanding reason to include new treatment. Given the acquirement doubtless this should not be denied, for there is harmony between all that is good. The danger lies in finding it all too easy, the fatal view that money will purchase of itself what we need.

We can appreciate the revolt of practical men where a sort of superstition is made of the past belieing the work of our own time. But we must not forget this fundamental difference, which has dulled our senses, depriving us of appreciation when we come in contact with traditional beauty—the virtue of which lies in no accident, but is the witness of the best things held dear.

NOTES.

The Manchester War Memorial.

The Manchester sub-committee, says the *Guardian*, "which was appointed to obtain a design for a war memorial has not, it appears, been instructed to find an architect, but, to approach a particular architect 'who can be trusted to prepare a suitable design.' The architect has been named to the sub-committee by the War Memorial Committee. This procedure was adopted after the War Memorial Committee abandoned the choice of design by competition, being unable to promise to accept the assessor's award as final." By this decision a very important issue for the profession is raised, for the rule which is now almost invariably followed, thanks to the pressure of the R.I.B.A. and the Society of Architects, is being ignored by an important public body. The competition system leaves much to be desired, but we should have thought, in spite of the defects of the system, the balance of advantage would have appealed to all public bodies, although we know that some of them hesitate to accept without question the decisions of an assessor. In the present case, the Memorial Committee would have been well advised to accept the award of the assessor, Dr. Worthington, of Manchester, who had been previously appointed assessor, but their objection to doing so gives point to the suggestion which architects themselves frequently make that a jury of at least three should make the decision.

Professor Beresford Pite, M.A., Hon. A.R.C.A.

Professor Beresford Pite's retirement from the Professorship of Architecture, which he has held at the Royal College of Art at South Kensington for twenty-three years, is felt to be a fitting occasion for some acknowledgment of his services in the cause of art education, and it is proposed to hold a dinner in his honour at Pagani's Restaurant, Great Portland-street, W., on Friday evening, July 20, when no doubt a large company will be present. It is difficult to estimate the value of the work of any teacher, but even a slight knowledge of Professor Pite's work at the Royal College of Art is enough to show what an important part he has taken in art and architectural education, while those students who have passed through his courses can have no other feeling than gratitude for his inspiring guidance and influence. We have still a lively recollection of a valuable criticism addressed to students on bridge designs many years ago, and our readers have no doubt heard with pleasure and admiration Professor Pite's stimulating addresses. Ninety-five per cent. of the art students of the College have passed through his architectural courses, and as most of them have become art teachers, his influence has been very far-reaching. We are glad to know that Professor Pite will be continuing his private practice. Mr. L. M. Austin, A.R.I.B.A., Royal College of Art, South Kensington, is acting as hon. secretary for the dinner. Tickets can be obtained from him, price 7s. 6d. each.

Leeds University War Memorial.

Now that the period of storm and stress which greeted this memorial has somewhat abated, and it has since got itself decently dedicated, we may regard its permanence as assured, and in such circumstances it is of interest to consider dispassionately its title to a work of art, or otherwise. "The most criticised memorial in Yorkshire," as we heard it described, should not receive less than justice, though a contemporary, no doubt voicing a very considerable body of opinion, was anxious that it should not be dedicated, being against its retention as the war memorial at all, and there were many others who, by reason of personal loss, were deeply concerned, and who also objected to it. We confess to a difficulty in taking a determined view as to its claims as a work of art, nor can we easily put into words our feeling on the matter. The riddle that it sets up in the mind is far, however, from any condemnation to it, and though it seems to escape what can easily be put into words, this also is not without virtue. Yet, such aim as it includes cannot be disregarded, and it may be granted at once as a quality that it is neither commonplace nor decadent, nor does it mistake realism of the imitative sort for art, being wholly creative and sincere. Primitive, if we like to find it so and judged by "classical" standards; but the best sort of art has in it something elemental, and is not concerned to woo our everyday appreciations, though this memorial is not without plenty of realisation of its own particular kind. We have therefore to be careful lest a hasty criticism should chill what are, perhaps, but searchings towards a new light which may change the face of present time art—and greatly for the better. For here we have first-hand experience and inward vision, hardly touched by the world. We do not say it is successful, but there lies deep significance in such work in its detachment and disregard of any desire

Monument to Marcus Aurelius Antonius, Florence.

Detail of Fountain in Saltsjobaden, Stockholm.
C. Eriksson (Sweden), Sculptor. (*See p.* 7).

to win us. We do not agree that a work of art is bad because it fails of recognition, and, though we feel the difficulty of framing a pronounced verdict, we ought in no way to be contemptuous of new forces that may be making for a new renaissance of art. This memorial is, in any case, far more successful than the quantity of quite commonplace memorials which raise no criticism whatever.

The Durham War Memorial.

It is to be hoped that the protest against placing a County War Memorial on the Palace Green at Durham will be successful. The letter from the President of the Northern Architectural Association (Mr. W. T. Jones), which we print this week, affords another illustration of the necessity for unremitting watchfulness in safeguarding the amenities of our towns. Only the other day we noted the removal to a scrap heap of a war memorial which had been both inadequate and badly placed.

The Housing Problem.

The following extract from a letter published in a daily newspaper is interesting: "It may be remembered that in order to protect the poor population rents were kept extremely low, so that the great bulk of the Viennese still pay comparatively little for their apartments. This has stopped most private building, practically everything being left to the municipality." We like this simple statement of fact. In this country we have similar conditions, but it has pleased many to believe that causes and consequences have ceased to operate, and they have never been at a loss to find some reason to explain away the economic failures. The truth is that idealism and economics do not work well together, particularly when combined under a measure of legislation, yet most of our difficulties and disappointments are the result of believing that we can do both things at once. What we cannot do upon an economic basis we must leave to philanthropy, though it is an ugly word to substitute for idealism. We do not alter the significance by placing our burdens upon the State. Controls and Rent Restriction Acts represent artificial factors that can only be met by adopting remedies which are equally artificial and economically unsound. There is nothing to be gained by pretending anything else; on the contrary it is almost certain in the end to react and prejudice the main principles for which we are all striving.

The Building Art.

Professor Lethaby's article this month on "The Building Art—Theories and Discussions" (see p. 16) is more than usually suggestive, and it cannot fail to provoke thought and, we hope, profitable discussion, which is what we all desire. "The modern architect," he says, "must come out of his bogey-hole of myth and make-belief, and work in the open, aiming at precision and perfection, and giving a fair opening to the artists whom he organises, from bricklayers to sculptors and painters. It is his duty as a distributor of patronage and employment to see that he calls for fine types of workmanship. He is not only erecting architecture, but he is building lives as well. I would suggest, as a general rule, that there can be no 'decoration' which is not vital workmanship; and none should be tolerated which is not by a free artist. Scientific structure and personal ornamentation is the thing to aim at."

A Wren Society.

Hardly had the bicentenary celebrations abated when a group of admirers of the great architect met together under the shadow of St. Paul's, at the suggestion of Mr. Mervyn Macartney, to devise the means of setting up a permanent and trustworthy record of Sir Christopher Wren's life and work. It was agreed to form a Wren Society, whose objects should be to hunt out his drawings and other documents—portraits, letters, reports, accounts and miscellaneous documents throwing light upon that long and admirable life and its multifarious activities—and to issue them in published form to subscribers. There is a wide field for such a work. The work of the Walpole, Vasari, Durer, Henry Bradshaw and similar societies shows what can be accomplished by a body of subscribers animated by a single object, and the Wren Society, which has already received promises of support from many eminent persons and bodies, has every reason to hope that its publications will be equally useful in the cause of art and history and equally full of interest. These it is proposed to issue annually, over a period of some twenty years, in the form either of portfolios of reproductions of Wren's drawings or other illustrations of his works, or of volumes containing ascertained facts and unpublished records. The subscription will be one guinea, and the Society's publications—supplied free to members—will not be obtainable through other channels. The Earl of Balfour has exhibited his interest in the Society's work by consenting to become its President, and the Hon. Secretary is Mr. W. H. Ward, 2, Bedford-square, W.C.1.

Bronze Statue of Mr. F. H. Royce.
Mr. F. Derwent Wood, Sculptor.
[This statue was unveiled at Derby on June 27.]

GENERAL NEWS.

Professional Announcements.

Mr. F. Lessore, sculptor, has changed his address to 7, Bruton-place, New Bond-street, W.1. Telephone: Mayfair 2573.

Mr. C. L. G. Modin has joined Foy, Morgan & Co., of 11, Bishopsgate, E.C.2, as a partner.

Leicester's Sewage Farm.

Serious financial losses in regard to Leicester's sewage farm formed the subject of a long discussion at the City Council meeting. It was decided to refer the report of the Special Committee to the Farm Committee.

St. Giles' Christian Mission.

The sixty-third annual report of St. Giles' Christian Mission gives many interesting facts concerning its great work among destitute people. During the past year the Mission provided 8,713 ex-prisoners with a free breakfast, assisting many to make a fresh start in life; admitted 133 friendless juvenile offenders into its homes, and obtained situations for 185 men and boys.

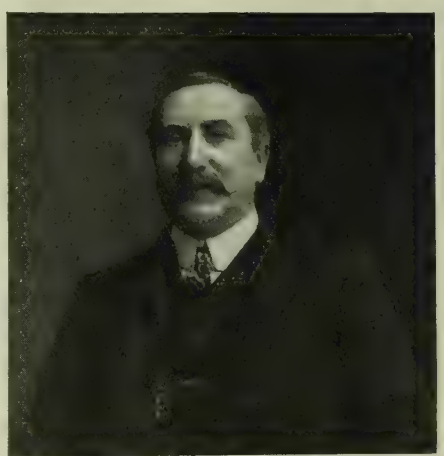
Sir Aston Webb, P.R.A.

An honorary doctor's degree has been conferred on Sir Aston Webb (President of the Royal Academy), by Cambridge University.

Tribute to Mr. Paul Waterhouse.

At the conclusion of the general meeting of the R.I.B.A., on June 25, after the presentation of the Royal gold medal to Sir John Burnet, Mr. Arthur Keen reminded those present that that was the last occasion on which Mr. Paul Waterhouse would take the chair at their meetings as President. He said he thought they all appreciated—certainly no one appreciated more fully than himself—the value of the services he had rendered to the Institute during the time that he had held the position of President. He (Mr. Keen) had been altogether surprised to find how much of his valuable time he was willing to devote to the service of his fellow-members. There was nothing that he had been called upon to carry out that he had not applied himself to with his utmost ability. He had presided over their meetings with the utmost distinction, and there had hardly been an occasion when he had been expected that he had failed to be present. They had to be profoundly grateful for all that he had done, not only in the way of carrying on the business of the Institute, but in advancing the very best interests of that great Society. In the matter of education he had distinguished himself exceedingly; he had taken an enormous interest in the business of their Board of Architectural Education, and he had carried the work of that Board to a very high point of efficiency. There was no aspect of the work of that Institute with which he was not fully familiar, and in connection with which he had not carried a considerable step further than it had reached before.

Dinner to Professor Beresford Pite, M.A.



A dinner has been arranged in honour of the retirement of Professor Pite from the Professorship of Architecture at the Royal College of Art, as an acknowledgment of his services in the cause of art education. Professor Pite was appointed to the School of Art in October, 1900, at the same time as the appointments of Professor Lethaby and Professor Moira at South Kensington, so that he retires at the end of twenty-three years' occupancy of the professorial chair. Professor Pite will continue his private practice and will still hold the Architectural Directorship of the L.C.C. School of Building at Brixton. His lectures at the School of Architecture, at Cambridge, will, of course, be also continued. The dinner will be given at Pagani's Restaurant, Great Portland-street, W., on July 20. Applications for tickets (7s. 6d.) should be made to Mr. L. M. Austin, who is acting as Hon. Secretary, Royal College of Art, South Kensington.

OBITUARY.

MR. J. H. MORTON.

Well known throughout the Northern counties as an architect of considerable ability, particularly with regard to the designing of churches and public buildings, Mr. Joseph Hall Morton, of Dinsdale House, Westoe Village, South Shields, died on the 28th ult., at the age of 73. He had offices in South Shields and in Westgate-road, Newcastle, and since 1900 his son, Mr. R. H. Morton, had been in partnership with him. The deceased gentleman was a Fellow of the Royal Institute of British Architects, having obtained his earlier training with the late Matthew Thompson, F.R.I.B.A., of Newcastle. He had occupied the presidential chair of the Northern Architectural Association, and in the course of his career had designed poor law institutions and infirmaries in various parts of the country, including South Shields, Gateshead, Leeds, Bradford, York, Doncaster, Hartlepool, Hexham, Burton-on-Trent, and Stamford, the South Shields building being the first built upon the "pavilion system" in the country, the remainder following upon these lines.

The beautiful outline of many local parish churches is due to his skill, particularly those of St. Aidan's, South Shields; St. Jude's, South Shields; St. Aidan's, West Hartlepool; and St. Aidan's, Horrington, Sunderland; and in addition he planned a colony for the feebleminded at Prudhoe to accommodate about 2,000 patients.

The Late J. H. Morton.

In various parts of the country, hotels, theatres, public offices, scholastic establishments, banks, and infectious hospitals, baths and washhouses bear the outline of his craftsmanship, and throughout Northumberland and Durham he took quite a prominent part in the preparation of housing schemes for the various councils.

Mr. Morton was a Freemason, and was the designer of many notable buildings of the craft in the neighbourhood, a member of the St. Hilda Lodge, South Shields, and he was a past provincial grand superintendent of works (Durham). He was a Churchman connected with St. Hilda's, South Shields, and for many years was a member of the ancient vestry and a churchwarden. In politics he was a Conservative. He leaves an upgrown family of two sons and three daughters, his wife having pre-deceased him thirteen years ago.

Mr. Morton had the honour of sending designs for workhouses and infirmaries to the Russian Government in the time of the late Tzarina, who was interested in this class of building. He was also asked by the Government to send similar designs to the Government of Venezuela. His design for the Stamford Infirmary formed part of the exhibit of the Local Government Board at the last Paris Exhibition, and was awarded "Hors concourse."

COMPETITION NEWS.

"THE BUILDER" COST OF BUILDING COMPETITION, No. II.

Some notes on Part II of *The Builder* Cost of Building Competition (open to builders) are given on p. 26.

Bournemouth Pavilion Competition.

The Assessor, Sir Edwin Cooper, F.R.I.B.A., has made his award as follows: First, Mr. G. Wyville Home, A.R.I.B.A., and Mr. Shirley Knight, A.R.I.B.A., of Lincoln Chambers, Portsmouth-street, Lincoln's Inn-fields; second: Mr. H. V. Ashley, F.R.I.B.A., and Mr. Winton Newman, F.R.I.B.A., of 14, Gray's Inn-square, London, W.C.; and third: Messrs. Collcutt & Hamp and Mr. J. F. Watkins, associated architects, of 20, Red Lion-square, London, W.C. 1. The premiated designs are illustrated in this issue.

General Post Office, Singapore.

The design of Messrs. Edmond Coignet, Ltd., of 125, Gower-street, W.C., has been selected for carrying out the new General Post Office at Singapore in reinforced concrete, for the Crown Agents of the Colonies. The building is to be erected on a triangular site, and will be 120 ft. in height (six stories). The principal facade will be 400 ft. long, and the other two facades 300 ft. long; it is to be built on a reinforced concrete raft foundation, and will have a flat roof. The intermediate courtyards will be covered. The reinforced concrete columns, &c., on the elevations will be cased with granite. The architect is Major P. H. Keys, D.S.O., F.R.I.B.A., of Singapore. A perspective view of the building, from the exhibit at last year's Royal Academy Exhibition, was given in our issue for July 28, 1922.

Anzac Memorial at Port Said.

The High Commissioner for Australia has been officially advised that the Assessors appointed by the Commonwealth Department of Defence to make the awards offered for designs for the memorial to be erected at Port Said to the memory of soldiers of the Australian and New Zealand Forces who fell in Egypt, Palestine and Syria, in the Great War, have allotted the awards as follows:—First: Mr. C. W. Gilbert (250 guineas); second, Mr. G. Gavin Lawson (100 guineas); third, Mr. W. L. Bowles (50 guineas). The competition was open to sculptors and architects of British nationality permanently resident in Australia or New Zealand, and to Australian and New Zealand sculptors and architects resident in other countries.

Assessors Appointed by the R.I.B.A.

The President of the Royal Institute of British Architects has nominated the following assessors:—Proposed Library, Armstrong College, Newcastle-upon-Tyne, Mr. Henry M. Fletcher, F.R.I.B.A.; proposed Hospital for the Burton-upon-Irwell Union, Manchester, Mr. William A. Pite, F.R.I.B.A.; proposed Public Hall, Truro, Sir A. Brumwell Thomas, F.R.I.B.A.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Singapore College (Jan. 1, 1924; March 30). Greenwich Baths (Aug. 25; May 4). Hull Art Gallery (Nov. 5; May 4). Mint competition for plaques (Sept. 30; May 25). Birmingham Masonic Temple (Sept. 12; June 22). Hull Cenotaph (June 22). Colour scheme (Sept. 30; June 29). Glasgow Pavilion (June 22).

Barking's Old Court House.

In a letter to *The Times*, Mr. A. R. Powys, Secretary of the Society for the Protection of Ancient Buildings, states that the Society has been informed by the District Council that the old Court House, Barking, is to be demolished. Mr. Powys announces that he is returning to subscribers the sums given for the repair of the building.

BOURNEMOUTH PAVILION COMPETITION.

We appear to have got well back again into a time of competitions after the lapse caused by the war, and, much as we have to say against them, we must admit that they seldom fail to interest the profession. Even if the bulk of the competitors do not rise to their opportunities, we are sure to find in any well-conducted competition the interesting comparison between various carefully considered treatments of the subject. In some competitions it is unlikely that anyone will realise the full possibilities of the problem unless they have themselves prepared a design, and we venture to think it not unlikely that in the Bournemouth Pavilion Competition the assessor has himself produced a design.

The site may be the most suitable and attractive one available in Bournemouth, but it certainly presents some special difficulties, largely owing to the great fall of 20 ft. from one end of the site to the other, though difficulties of this kind have a way of turning into positive advantages in the hands of a skilful designer.

After the issue of the conditions, over two hundred questions were asked by intending competitors.* The accommodation asked for was a concert hall on the higher level entered from Westover-road; administration offices, billiard and reading rooms; tea and refreshment rooms and lounge, also from the same level; large refreshment room (licensed) and offices for beach undertakings on the pier level; green and dressing-rooms, scenery and music storage and tea balcony on mezzanine floor. A public stair was desired from the pier level to communicate with the higher level in Westover-road. To provide this accommodation with a convenient interrelation of parts was a problem requiring some thought, and the cost had to be borne in mind, as the promoters held themselves at liberty to abandon the scheme if the cost exceeded £110,000. The separate departments of the group of buildings might be let to different tenants. The whole scheme with its attractive park surroundings obviously lent itself to a fine effect of architectural grouping with the concert hall at the north end, or in the centre, dominating the whole. Though some clever designs have been submitted, it can hardly be said that any one of them rises to the full possibilities of the occasion, or that any particular one has been so outstanding in its precedence of merit as to make the task of selection a very obvious and easy one.

The first premiated plan, which we illustrate this week, is simply and well laid out, and would build economically. The grand entrance from Westover-road is some 40 ft. deep to the back of the corridor space, and suggests some lack of light; it gives direct access to the concert hall (88 ft. 3 in. square) and to corridors on either side, which continue on a direct line to the lounge tea room at the south end. There is an open area between the concert hall and the tea room; and on the east and west sides of this are the billiard and reading rooms opening from the corridor. The lower ground floor on the south front has a restaurant for 350 with flanking corridor, and kitchen to the rear; the dispensing counter is small. Staircases lead up from the front angles of the restaurant to the mezzanine balconies. Advantage is taken of the plan for good outlook over the gardens and sea round the east and west and south fronts. The exterior is well treated and the concert-hall portion should develop well; but the south front is rather forbiddingly heavy—it has certainly anything but a joyous appearance, and the whole design would be improved by modification and lightening of this part.

The second premiated plan has a concert hall some 55 ft. from the Westover-road entrance. It is 100 ft. by 108 ft. with canted angles. There is an open court between the concert hall and the refreshment lounge, but in this case the billiard room (to the east) and the reading room (to the west) are both lighted from the outer main wall. A drawback in this scheme is that too much of the south front is taken up with stairs and entrance halls. The plan scheme is an able one. The exterior is treated in a well-known manner of modern Renaissance and seems far too dull and formal for its purpose.

The third premiated plan is distinguished by a free use of curves. The great circular end to the sea front would make a pleasant lounge and gallery, and the curved connecting corridors from the lounge to the concert hall would be a good feature, but the curved sides to the south end of the concert hall appear a little doubtful; the entrance corridor to the hall is also curved; in fact, the plan is quite a study in curves. The plan is certainly ingenious, but the exterior, which might to some extent have justified it, is not much unlike or more exhilarating than a drapery store.

There are few, indeed, of the designs which call for comment, but No. 23 is certainly amongst the best; probably it would have made the best exterior treatment of all, for it has breadth of effect, whilst it is picturesque and would have produced a telling effect of light and shade with its wide, overhanging eaves and pillared corridors; the interior treatment is also good. The plan is well laid out and coherent, and the assessor must have found vital defects in it which are not, perhaps, at first sight apparent.

In No. 31 we have an exceptionally able design with a fine domed concert hall coming near the centre of the site. Such a design would be costly, but an admirable building and fine dome like this would be worth paying for. There are many points of excellence in the plan and the whole scheme, whilst appearing too grandiose for its purpose, ranks about first in excellence. The line drawings are excellent, but the perspective loses the dignity and character of the design.

No. 26 is a well-balanced scheme with one of the best exteriors; the lobby in the centre of the south front is a mistake. The perspective spoils the effect of the elevations, which should work out well.

An excellent set of drawings illustrates No. 25, which has a simply treated good exterior. The circular end to the concert hall was surely hardly worth while.

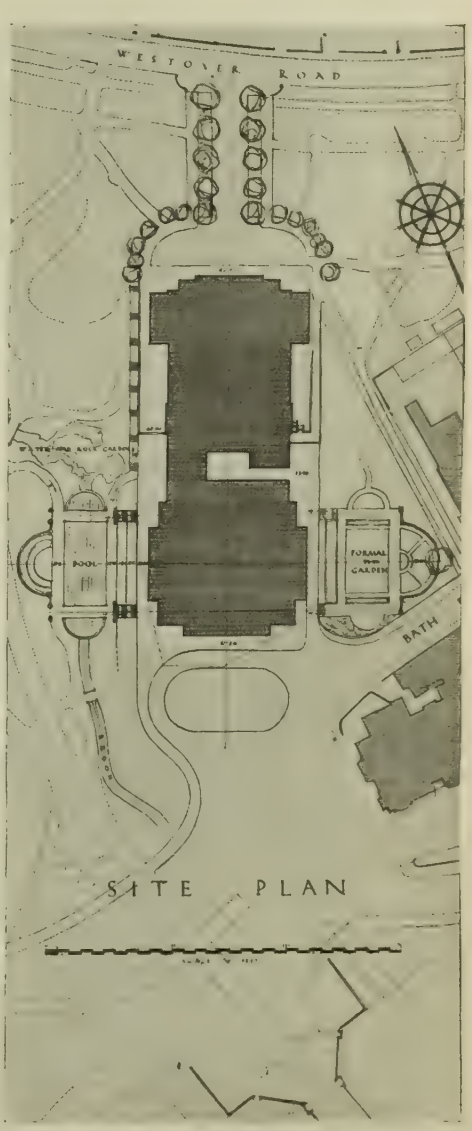
A well-conceived plan is No. 45, which, with modifications, would have ranked with the best. The exterior fails in that the south half of the building group does not join in satisfactorily with the northern point. Some of the competitors have, we think, exaggerated the need for lofty erections over the stage.

The plan of No. 52 shows an oblong concert hall, and the authors—perhaps wisely—have put its axial line well over to the east, and so get a good reading room and lounge balcony on the west front. The exterior dome is pleasing, but has no apparent connection with other parts of the building. The general effect from the sea and gardens is somewhat heavy for the subject.

A good point in No. 20 is that the east side corridor ends with the concert hall, so that a reading room and billiard room have direct outlook to the east.

No. 82 is a good plan, but perhaps making rather too much of the grand vestibule. The design is an effective one in its perspective, with its four towers at angles of the hall and curved outside stairs, but suggests a rather heavy cost.

Amongst the best designs is No. 4, and though well laid out in plan and well treated elevationally has some defects, such as the approach to the concert hall down steps from the Westover-road entrance.



No. 14 is a good plan, with nice exterior treatment. The plan gives a fine series of rooms on the west front by keeping the axial line of the concert hall over to the east. The reading room, billiard room, and lounge on the west front are a good feature. No. 35 is a meritorious design.

No. 1 is one of the most noticeable designs. Its plan has much merit; the elevations are simple and good, and the whole scheme is admirably illustrated. It suggests to one whether it did not deserve a place.

No. 43 is one of the noticeably clever designs and admirably illustrated.

It will probably have occurred to some competitors that if they had been free of all conditions they might have done better; and we have always thought that suggestions are better than conditions and that it is wise to leave those entering a competition as free a hand as possible. It is well to know what promoters want, and perhaps the general form in which they prefer it; but, if a competitor is left with a fair amount of freedom, he may be courageous enough to put forward a scheme which runs counter to the suggestions of the promoters.

We may feel inclined to wonder why such a subject as this pleasure pavilion for Bournemouth does not evoke ideas of more lightness and gaiety in building expression, and why the designers do not forget town halls and temples and business premises. A building may have grace as well as dignity; it may produce some sense of joy and freedom without a sacrifice of good, sound architectural forms. Doubtless there is something lacking in this respect in our national temperament, but we should make a much stronger appeal to the public if we could deal in a more sprightly and cheerful way with buildings designed for public pleasure.

Bournemouth Pavilion Competition.

First Premiated Design, by Mr. Wyville Home, A.R.I.B.A., and Mr. Shirley Knight, F.R.I.B.A.

CORRESPONDENCE.

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Houghton Towers.

Sir,—I have just heard that a proposal is on foot to demolish the very considerable remains of the famous "House Beautiful," Houghton Towers, at Ampthill, in Bedfordshire. The house is little known to the ordinary man, yet it is one of the few houses of the early seventeenth-century that can be definitely attributed to the joint labours of John Thorpe and Inigo Jones. The mansion was projected by the Countess Pembroke, "Sidney's sister, Herbert's mother," in 1615, John Thorpe being responsible for the "Du Cerceau" plan and Inigo Jones for the Palladian finishings, including the loggias, the tower over the south porch, and the internal fitments. At the present time sufficient of the fabric remains to show the character of the work as these architects left it.

The owner will demolish the walls and dispose of the valuable architectural features unless immediate action is taken. Only two ways of saving this historic building remain—first by private purchase, or, what is more certain, Government action.

In connection with the latter, few people realise that the First Commissioner of Works has power to issue a preservation order in just such a case; this power, to the best of my knowledge, has not been exercised hitherto. Surely the present issue offers a golden opportunity to the Government to carry out the provisions of the 1913 Act.

A. E. Richardson,
University College, London.

Durham County War Memorial.

Sir,—Attention has lately been drawn to the proposal to erect the County War Memorial upon the Palace Green at Durham. Durham has suffered so greatly in the past from destruction and mistaken zeal that any proposal, however well intentioned, cannot be allowed to proceed without close scrutiny. Presumably the war memorial is a public memorial; at any rate, an open appeal was made, but up to the present moment the public have been allowed no information and no opportunity of forming any judgment upon it.

In any case, a matter affecting the surroundings of the Castle and Cathedral of Durham is of interest, not only to the promoters of the memorial, but to the citizens, the county, and the country. Individuals will doubtless differ as to the conception of the memorial, but on the question of the proposed site northern architectural and archæological opinion is unanimous, and is fortified by the highest authority existing on architectural grouping. It may, therefore, be of interest to know that the question was considered and condemned by the Council of the Northern Architectural Association. This body later referred it to the Council of the Royal Institute of British Architects, who confirmed the opinion of the Northern Association. The matter was also considered by the Society of Antiquaries (London) and the Newcastle Society of Antiquaries. All these bodies united in condemning the proposal to erect the memorial upon the central line of the Palace Green, and have notified the promoters to that effect.

No one would deny to the memory of those who fell the best site possible, but the proposed site and its surroundings would overwhelm the memorial and reduce it to an object of insignificance; it would remain simply an irritating obstruction in the view of the great Church.

The "Palace Green" was formed by Bishop Flambard before 1120, and has remained for some 800 years free and unobstructed, and its clear space in front of the Church is unique, and is necessary for the display of the magnificence of the dominating feature—the great tower. It is earnestly to be hoped that the authorities will see their way in the near future to clear away the modern grass mound and tree which upset the balance and detract so much from the impressiveness of the scene.

In endeavouring to preserve this historic open space as a setting to the tower, architectural opinion offers no disrespect to the dead. There remain, in the neighbourhood and elsewhere, excellent sites, more appropriate to the scale and nature of the proposed monument, upon any of which the memorial would assume a rightful predominance without hurt to its surroundings.

W. T. Jones,
President, The Northern Architectural Association.
Newcastle.

Stoke Poges.

Sir,—I read in one of your contemporaries that new plans are being proposed for the preservation of the Gray "monument" and "the neighbourhood of the churchyard from the too close intrusion of building"; and attention is drawn to the "great monument in memory of the poet Gray," with a view to inducing "some moderately wealthy person

The Gray Memorial.

who will, with a single splendid gesture, safeguard from spoliation for ever the amenities of one of England's most cherished possessions."

May I be allowed, as a constant reader of *The Builder*, an occasional contributor, and a collateral relative of the poet (as having with him a common ancestor), to say that a recent visit to the monument, the church, and the surroundings, failed to bring to my notice anything at all approaching to a "too close intrusion of building," or to inspire me with the greatness of the monument, except in a purely literal sense. "Great" it certainly is, more fitted for the reception of the mortal remains of an Adamastor, a Gog or a Magog, than of the moderate human proportions of our *vates sacer*. Anyone who will examine for a moment the accompanying view will observe the incongruity of the *innigkeit* of the design with Gray's own sentiments: a man who looked with scorn and disfavour on the "storied urn" is poorly honoured by such a monstrosity as the ponderous sarcophagus, more resembling a Victorian wine-cooler usually seen under a rich man's sideboard than the *denkmal* of a world-worshipped poet. And although it is true that many illustrious persons have been honoured with inscribed tablets and other memories, surely so transcendently great a man, as Gray was in the realm of prophetic poetry, deserves an effigy rather than an empty coffer. How much more deeply does the simple medallion portrait in the "poets' corner" of Westminster Abbey affect our veneration and appreciation of the man than does the commonplace tea-caddy erection standing in a field adjacent to Stoke Poges Church, inscribed with a few extracts from the immortal "Elegy," already deteriorating from the inroads of the wind and the rain. Surely a seated figure pointing to the "churchyard" and the "ivy-mantled tower," the "mouldering heap," or the "straw-built shed," or with uplifted finger calling attention of the listener to the tolling of "the curfew," would have been far more appropriate, and let us hope that if ever the present memorial were to be replaced with one more in harmony with Gray's character, as displayed in his poetry, a more inspiring design may be materialised.

Chiswick. Walter de Gray Birch.

Small House Plans.

Sir,—Professor Kerr, in his admirable book on House Planning, laid down as an axiom that there should be direct communication between the kitchen and scullery, without any intervening lobby; also that the scullery sink should be as close to the kitchen fire as possible. Many of the housing scheme plans published do not follow these reasonable rules. Messrs. Culpin & Bowers, judging from their plans in your issue of the 29th ultimo, which are rather put forward as the last word on the subject, do not appear to think it necessary to regard them. The distance from the sink to the living room, which is equivalent to kitchen fire, in plan "A," is particularly great. It would be interesting to know why they did not put a door communicating directly between the scullery and living room, say between the gas cooker and the sink. It may be said the gas cooker alters matters; it might in summer, but in winter there always would be a fire in the living room, and it would, therefore, be wasteful to have to light the gas for every simple cooking operation, such as boiling a kettle, or have a long way to walk to fill it. In "D," which is said to be "an extraordinarily economical plan," the larder and back porch seem to take up a good deal of space in a scheme in which every foot super is of paramount importance.

London. W. J. H. Leverton.

Staining Oak.

Mr. Ernest G. Smith, of Messrs. Girling & Smith, of Cross-street, Cromer, writes as follows, in reply to "Readers'" inquiry in our last issue:—

"Your correspondent who asks for a method of lime staining oak does not give any indication of the kind of work to be done. If it is outside rough oak, and it is desired to get a good aged effect, it can be obtained by making a slurry of Buxton lime and applying it thickly; when thoroughly dry the lime should be brushed off. If a roughened surface is required, use a wire brush, scrubbling with the grain.

"If the work is wrought, like oak panelling, the same process can be used, but will leave the granules of lime in the pores of the wood. Should this be an objection, and merely a stain required, lime water can be used. This can be made by putting some Buxton lime in a tank and filling up with water. Stir it well and then allow the lime to settle until the water is clear. If possible immerse the wood, being careful not to stir up the bottom. If the work is too large, soak it well with the lime water until the desired tone is obtained. It should be noted that all oak will not stain alike, and sapwood not at all. A sample should be tested.

"I have found carbide sludge gives a good nut brown stain, and a piece of English oak immersed for two or three weeks was impregnated to a depth of an eighth of an inch. Common soda and potash will make good stains for English oak."

ARCHITECTURE AND SCULPTURE IN SCANDINAVIA*.

By KINETON PARKES.

As early as 1100, when Lund Cathedral was built, there was a symbolic union of the two arts—the twin arts—of architecture and sculpture in Sweden. In the crypt of the cathedral there is the celebrated pillar known as the "Giant Finn embracing the column." To-day in Sweden, Norway, Denmark, and Iceland that symbol has justified itself. In the three former countries there is a close alliance of the two arts; in the last-named there is a union, for, in the person of Einar Jónsson, we have sculptor and architect combined, a man who has designed and built a national memorial which contains, and will further contain, the plastic works which he intends for the glorification of Iceland.

Whatever cosmopolitanism the three major countries indulged in—and Sweden certainly was very cosmopolitan at one time—there is no doubt that they now possess a distinct and favourable nationalism. Swedish, Danish, and Norwegian artists had to go abroad in the early days of last century to learn their trade, but they learned also the necessity of acquiring it at home, and so the academies of Stockholm and Copenhagen were founded, and they in turn served as schools for the teaching of foreigners, who came to them from Finland and farther away. Christiania was later in joining this movement, but has now levelled up.

The whole of the Scandinavian nations had an accomplished early art, and the peasant arts still persist, and often from them there emerges one who attains to rank as sculptor or painter. There are notable examples, especially among the modern sculptors. From among these peasant craftsmen, carvers and builders were selected for the early churches and castles, especially those of Sweden, and there are sensible remains of ornament preceding the Gothic, and there is beautiful architecture in the remains of such a church as that of the Helgeandsorden at Visby, that picturesque coast town. The portal of Etelhem church shows the characteristic union of Romanesque and Gothic of the Gotland edifices, while English influence is distinct in the nave of Linköping Cathedral. The application of sculpture is amusingly seen on a console in Upsala Cathedral, which represents the suckling of Jews by a sow, and is again illustrated in the excellent frieze of mounted figures around the baptismal font, in low relief, of Tingstad church in Ostergötland of about the year 1200. In the fifteenth century carving for the churches came from Germany and Belgium, but there is one famous native product, by Berndt Notke, the St. George and Dragon in Storkyrka, at Stockholm, built by Birger Jarl. Mural painting, too, was prevalent, as in Osmo church, in Södertörn.

In the celebrated castles of the Vasas decoration was used, an example being a frieze in relief-painted stucco at Kalmar. In the court of this castle is a fine fountain by Dominicus Pahr and Roland Mackle, in which mediæval and Renaissance elements are combined. Domestic city architectural sculpture was not neglected, and the portico of Erik von der Linde's house in Stockholm, built at the time of the Thirty Years' War, is a handsome specimen. The Hall of Knights, designed by Simon de la Vallée and his son Jean, belongs to the end of the seventeenth century. The architect of the Royal Palace was Nikodemus Tessin, and he was associated with Burchardt Precht, the German sculptor in wood, and the surprising pulpit in Upsala Cathedral shows the extent to which they were exhilarated by the princely treatment they received at Versailles.

French and English influences then prevailed, but the next event of importance was the appearance of Johan Tobias Sergel, born in Stockholm of German parents, and destined to become the greatest name in Swedish sculpture. Sergel for nearly fifty years dominated the arts in Sweden, and at a period when Classicism was rampant, diverted, in his own work, the current making so rapidly for the vacuous formation of the first half of the nineteenth century. His Faun, in the National Museum, shows him at his best in his Classicism; his bust of Countess Charlotta Fredrika von Fersen shows how his feeling for naturalism saved him from becoming another Thorvaldsen or Canova.

The recent history of sculpture and architecture includes several symptomatic sculptors, such as John Börjeson, Teodor Lundberg, and Per Hasselberg—a splendid trio—while Christian Eriksson, Carl Eldh, and Carl Milles are hailed as the great artists of the contemporary period. After the dull time of 1860 to 1890, from which most countries suffered, the work of the modern architects was applied to dwelling houses and business premises. Two important architects of this time, Helgo Zetterwall and Ernst Jacobsson, both died in the earlier years of the present century, and their places were taken by Aron Johansson, Axel Anderberg, Frederik Lilljekvist, Gustav Clason, Ferdinand Boberg, Carl Westman, Ragnar Ostberg, Lars Wahlman; and there are many others of equal powers, who are responsible for the astonishing output of modern buildings rendered possible by the great commercial prosperity of the country and the love of the arts manifested by its merchants and financiers.

Architecture in Denmark cannot show a corresponding national tradition with that of Sweden. It was mostly derived from the south until the advent of the "Gothic Renaissance," when stair-towers and spires were much in vogue in buildings other than the churches. The Dutch influence seen in Vallö Castle, Frederiksborg, and the Copenhagen Exchange gave place in the eighteenth century to the baroque and rococo, in which styles most of the best buildings near Copenhagen were designed; Thura's Hermitage in Dyrehaven and the Prince's Palace in Copenhagen vie with Eigtved's four palaces of Amalienborg Plads in beauty, these latter having a claim to be the finest examples of restrained baroque in Europe. The colonnade of wood connecting these palaces is the work of Harsdorff, and is the finest piece of neo-Classic work in Denmark, and to this architect are due the best of the simply designed houses of the capital. The Classic Courthouse was the work of Chr. Fr. Hansen.

Harsdorff inspired M. G. Bindesböll, another neo-Classical architect and designer of the Thorvaldsen Museum, a severe squared block, devoid of pillars or columns or other ornament, although Harsdorff always tried to introduce colour and pictorial effect, a desire engendered during his travels in Europe, to Pompeii, Sicily, and Turkey. This museum is the masterpiece of Danish architecture. There was not enough work in Denmark for several great architects, and the brothers Hansen were both at times resident abroad, Christian in Athens, and Theophilus in Vienna, and so lost to their native art.

About the middle of the nineteenth century Johan D. Herboldt led a movement in favour of old Danish feeling, but did not confine himself to it, as his Late Italian Renaissance National Bank in Copenhagen shows, and his University Library was also Italinate. His

The "Wave" Fountain.
Anders Svor (Norway), Sculptor.

pupil Storck was the architect of Hirsch sprung's Museum. The movement, at any rate, resulted in the activity of several architects, and the erection of a number of more or less important buildings, including Dahlerup's Ny Carlsbad Glyptotek, the great art museum paid for by the rich brewer, Carl Jacobsen, which is the home of most that is vital in Danish art. Following on this group is a still younger body, at the head of which the name of Martin Nyrop has to be placed. Again the national feeling, still active, lay in abeyance, while the great Copenhagen Town Hall, Tuscan as to its exterior, Roman as to its interior, came to completion at the beginning of the twentieth century.

Whatever may be said of Thorvaldsen and his Classicism, it has to be admitted that Danish sculpture is a real school unto itself. It is claimed for him that he escaped the exploitation of the sugary form, the southern sensuality, the sentimentality and the virtuosity of Canova. He is indeed a more virile Classicist than the great Italian, and if Classicism must be, then it is best to have Thorvaldsen's, modified by northern strenuousness. He did indeed believe in and practise the study of nature: he used models instead of casts. If anything could be said for neo-Classicism Thorvaldsen said it, and thus contributed Denmark's share to European culture. This was only the beginning, however, for ever since there has been a succession of competent sculptors to carry on the work until the advent of the modernist spirit. An associate of Thorvaldsen in Rome was Herman H. Freund, who, in opposition to the trend of culture at the time, acclaimed Michelangelo, and in this burst of freedom took part in the Scandinavian renaissance, which consisted largely in applying myth and saga as subjects in national art. Freund was commissioned to do the frieze in the new Christiansborg, which was unfortunately burnt in 1884, but fine works of the same inspiration exist in Loki and the Goddess of Fate. A contemporary was J. A. Jerichau; another, H. V. Bissen, and these men are responsible for the thin end of the wedge of realism, which was to lift the plastic art of Denmark entirely from the hard level of neo-Classicism.

Bissen's many pupils carried on the good work, and Vilhelm, his son, made a statue called The Girl Painting a Crock, which is a beautiful example of the union of the old and new ideas. With this group the art was carried through the middle years of the century, aided by others, such as Hasselriis, Schultz, Axel Hansen, and Kröyer.

The new school of Danish sculptors is one of the most vigorous in Europe, and perhaps the most original. It is not nationally Danish, but it is making for itself a reputation which sets it apart from any other in the world. There are great artists in Denmark now, and not the least great are the plastic ones. There is J. F. Willumsen, painter and sculptor; Anders Bungaard; Rudolf Tegner; Viggo Jarl; Johannes Kragh; Hans Larsen; Ludvig Brandstrup, whose portrait busts are admirably naturalistic; there is Niels Hansen-Jacobsen, an extraordinary genius who disregards anatomy in its entirety; and Niels Skovgaard.

The quite recent school includes the men preoccupied with technique, who are producing some of the most fascinating work in bronze that Europe has seen since the Renaissance: Jens Lund, Johannes Bjerg, Utzon-Franck, and others; and lastly there is Kai Nielsen, a prophet of the most recent theories of simplification.

Norway offered painting in preference to architecture and sculpture as its contribution to the culture of the nineteenth century, but happily there is sufficient vitality of the two latter arts to enable them to maintain a foremost place. The handicrafts have an honourable history in Norway, and the carvings on the Romanesque wooden churches provide evidence of the existence of the veritable forerunners of the accomplished carvers in wood of to-day which Norway possesses. In the mediæval stone churches, too—as the masks and heads of Trondhjem Cathedral—there are indications of the same character. From craftsmanship such as this the first plastic artist of the country emerged in the person of Magnus Berg, who worked in wood and ivory and also painted. He died in 1739, and fifty years after Hans Michelsen made for himself a similar career, in the course of which he was a pupil of Thorvaldsen in Rome. For the most part it was a career of set-backs and misery. Norway was not in a position to encourage the plastic arts, and Michelsen had to take refuge in Stockholm, after having carved his Apostles in the Trondhjem Cathedral and made statues of four Norse kings for Oscarshal. He died in 1859.

Grave Monument. J. F. Willumsen (Denmark), Sculptor.

It was this little king's palace of Oscarshal that started a real tendency towards sculpture, and Christopher Borch was engaged to carve some saga reliefs there, and Borch advanced in the direction of national Romanticism as against Michelsen's Classicism, and so paved the way for the greater artists who followed him. Julius Middlethun was the most celebrated of the earlier men, and was a son of a coin-engraver and a pupil of Bissen in Copenhagen. He lived eight years in Rome, and his fine bust of the poet Welhaven, in the students' room at Christiania, shows how he succeeded in grafting on to the best spirit of Roman work the touch of naturalism which made him a great portraitist. Another student in Bissen's atelier was Brynjulf Bergslien, whose rival was Carl Jacobsen, an inferior sculptor, also trained abroad.

Then, in the 'seventies, a change dawned. The pupils of Middlethun began to assert themselves; Classicism prepared for its departure; nationality, originality, and naturalism made their appearance in force. Stephan Sinding, Mathias Skeibrok, and Sören Lexow-Hansen were already trained, the first having come of an artistic family. He managed to achieve a reputation with one work, and it is indeed a very fine one—the barbarian woman carrying her son off the battlefield. Carl Jacobsen, the brewer, became his patron in Copenhagen. There existed but one nude female figure in Norwegian sculpture, the Shulamite of Borch, and Sinding challenged his native country with his studies of the nude; the Two Human Beings was considered a daring achievement; in very fact it was a striking and a useful one, for it awakened the nation to a realisation of sculpture. Sinding's influence has been more than Norwegian.

Mathias Skeibrok died in 1896, a quarter of a century before Sinding; he did many statuettes, but his chief work is the great decoration of the pediment of the University main building in Christiania, in which he was only partially successful. In the National Gallery is the fine draped statue of Vala Rising from the Sea, by Lexow-Hansen, showing a complete separation from the Classical method of presentation, and indicating how the suggestions of new subjects create a reaction in treatment.

While Norwegian painting had reached its zenith towards the end of the century, the opportunity was offered the sculptors by the competition for the Holberg statue at Bergen. It was not made use of, although the sense of failure served to spur on the younger sculptors; but further misfortunes occurred, such as the departure to America of Fjelde, and the death of Hertzberg, while Lars Utne was in Berlin for some years, only returning to do some work for the National Theatre.

The situation was saved, however, by Anders Svor, Jo Visdal, Ingebrigt Vik, and Borghilde Arnesen, for Gustav Vigeland, who, born in 1869, is the greatest plastic artist Norway has ever had, and is by way of possessing genius. He was not systematically trained, but he made visits to the studios of Bergslien, Skeibrok, and Bissen, and Middlethun had a certain influence on him. He travelled, and by so doing developed his imagination, and now he allows his individuality to have full play. Naturalistic in his method, he has made use of impressionism, and is revealing new things which neither naturalism nor impressionism are accountable for—new visions. His relief Hell contains 200 figures in bronze, and is in the National Gallery. Vigeland is a Norwegian Rodin in his eager research for form and for emotion. He is much concerned with the mystery of man and woman, and his detail of two figures in a fountain indicates this. His curiosity in relation to pure form is seen in the Torso of a Woman in the National Gallery.

FRANCO-BRITISH UNION OF ARCHITECTS.

The third general meeting of the Franco-British Union of Architects, which took place in London, proved to be a very successful conference, and the French delegates and members who visited London returned to Paris with some happy memories of their stay. The object of the Union being social rather than purely technical, official business was limited as usual to one meeting, preceded by a meeting of the Bureau (or Council) earlier in the day, and the rest of the programme was almost entirely devoted to visits to buildings of architectural or historical interest, and social functions.

The French delegates were met on their arrival by the Secretary-General, and after a brief rest started out on a tour of inspection, which ended with dinner at the Trocadero.

On Monday, June 25, after the meeting of the Bureau—at which officers for the coming session were nominated and the names of candidates for election formally approved—a visit was made to Lansdowne House, where members were received by Mr. H. Gordon Selfridge, who personally conducted the party over the house and explained the treasures of his valuable collection of early Italian manuscripts. The visit concluded with a luncheon, when the French and British members attending the conference were the guests of Mr. Selfridge. Among those present were :—MM. J. Godefroy (Vice-President F.-B.U.A.), Legros (President S.A.D.G.), Chifflot (Inspecteur - Général des Batiments Civils, representing the Ministry of Fine Arts), Louvet (Past President S.A.D.G. and F.-B.U.A.), Arfvidson (Vice-President S.A.D.G.), Schneider (Secrétaire-Général S.A.D.G.), Chretien-Lalanne (representing the Société Centrale des Architectes), Hebrard, Lish, Lefebvre, de Saint Maurice, Paul Waterhouse (President R.I.B.A.), Sir John J. Burnet, A.R.A., Arthur J. Davis (Hon. Sec. British Section F.-B.U.A.), H. P. Cart de Lafontaine (Secretary-General), le Vicomte de Sibour, Prince Weasemsky, &c.

After the customary loyal toasts had been duly honoured, Mr. Selfridge proposed the health of the guests, which was briefly acknowledged by M. Godefroy and Mr. Waterhouse.

The general meeting of the Union took place at the R.I.B.A. at 3 p.m. The chair having been taken by M. Godefroy, the Secretary-General read a letter from the President (Mr. J. W. Simpson) expressing his great regret at being unable to attend.

M. Godefroy was unanimously elected President, with Mr. Paul Waterhouse Vice-President, for the session 1923-24. The following members were elected as members of the British Committee :—Messrs. P. Abercrombie, S. D. Adshead, Fernand Billerey, Sir R. Blomfield, Arthur J. Davis, A. N. Paterson, and W. G. Newton.

The official business then terminated, and members next met at the Burlington Hotel, as the guests of the R.I.B.A. Council.

Immediately after dinner members and guests adjourned to the R.I.B.A. galleries for the Gold Medal meeting, when Mr. Waterhouse called on two of the visitors to support his presidential remarks to Sir John J. Burnet, the Royal Gold Medallist.

Monsieur Godefroy (who spoke in French) referred to the pleasure which it gave Sir John Burnet's French colleagues to be present on the occasion of his receiving the highest award which the Royal Institute could confer on an architect. He desired, in the name of the architects of France, and more particularly of Sir John's old colleagues of the Atelier Pascal, to assure him of their pleasure at being present on such an occasion to add their congratulations to those of their British colleagues on the well-merited honour of which he was the recipient that evening.

Monsieur Legros (President of the Société des Architectes Diplomés) also expressed on behalf of his society their cordial endorsement of the award as well as the pleasure it gave members of the Franco-British Union to be present on that occasion, when a high distinction was conferred on one of the original members of the Union.

On June 26, the first item on the programme was a visit to the British Empire Exhibition under the guidance of Mr. Maxwell Ayrton. This proved a most interesting visit, and the French members were particularly interested in seeing the details of construction in various stages in the exhibition building. On the conclusion of this visit they were the guests of the Architectural Association at an informal luncheon and subsequently paid a visit to the A.A. Schools and the First Atelier of Architecture, the latter proving particularly interesting, as the resemblance to the Beaux Arts Atelier, which at the same time had a definitely British character, interested the visitors considerably. A rapid visit to the British Museum extension and to Mr. Lanchester's office was interposed on the way to the R.I.B.A.

In the evening members were the guests of their British colleagues.

On June 27 a full day was spent, commencing with a visit to Buckingham Palace by special permission of His Majesty King George V. The visit was limited to French delegates and the officials of the British Section. On arrival at the Palace members were met by Sir Lionel Earle, who introduced the French delegates to Sir Douglas Dawson and Sir Derek Keppel before the party proceeded to inspect the Palace and grounds. The visit was greatly appreciated by the French visitors.

Immediately after this visit members of the Bureau and French delegates were entertained to luncheon by the First Commissioner of Works on behalf of His Majesty's Government at the Ritz Hotel. This proved a most successful function, and the French members were particularly pleased by the speech in their own language addressed to them by Sir John Baird in giving the toast of " Our Guests."

A visit was subsequently made to Knowle Park, by kind permission of Lord Sackville, and this quite charmed the French members, most of whom had not previously had an opportunity of seeing a typical English country house of historic interest. On their return to town the delegates were entertained to dinner at the Automobile Club by Mr. Arthur Davis, and this provided an extremely agreeable termination to the conference.

THE NATIONAL PHYSICAL LABORATORY, TEDDINGTON.

The inspection of the work of the Laboratory by the General Board is made the occasion of a series of demonstrations of various particular lines of research that have been carried out during the past year. The activities of the Laboratory are extended in many directions, no fewer than 130 exhibits being arranged for the instruction of visitors at the annual visitation on June 26.

One new experiment of great interest which will doubtless result in information of considerable practical value is an investigation into the nature of the cutting action of steel tools. The processes of removing a fragment of steel from a revolving disc by means of a turning tool have been photographed to a greatly enlarged scale, with the surprising result that direct cutting action is seen to play a very small part in the operation. The particles of metal are roughly bruised and broken away from the edge of the mass and undergo very considerable and rather inexplicable distortion of shape in their forcible removal. It is hoped by following up this line of inquiry to determine the appropriate forms of tool for specific operations, having regard both to speed of cut and the durability of the tool. A problem in metallurgy upon which a great deal of attention is being concentrated is the preparation of aluminium alloys of great lightness and strength.

For the crank shafts of aeroplane engines a material which combines these qualities, with the ability to resist changes of temperature without becoming brittle, is of the utmost importance. The most promising compound yet discovered is the " Y " alloy, consisting of 4 parts of copper, 2 parts nickel, 1½ parts manganese, and 92½ parts aluminium, and this is being made the subject of continued research. The proportions having been arrived at by one series of experiments, the effects of casting the metal in chilled moulds of varied sectional area have also been studied. With the same metal different degrees of strength have been obtained by merely pouring the metal into the mould at a greater or less speed. That the crystalline structure of the metal is very obviously affected by these apparently trivial factors is illustrated by a collection of photographs to an enlarged scale of surfaces polished and then etched with alkali. By a process of heating for six hours at a temperature of 520 degs. centigrade, great additional strength is obtained in the same alloy. More prolonged heating, followed by tempering, has resulted in the production of still greater strength, and test pieces have been subjected to a tensile strain of 26½ tons to the square inch. The melting points of the various ingredients of this valuable engineering product have been made the subject of elaborate chart models designed in three dimensions and constructed of coloured wires. It has been found that the fusion factors of the material have a marked effect upon the strength. These models are in the nature of composite graphs tracing out the effects of combining the different constituent materials in different proportions at different temperatures.

Apparatus for subjecting materials to extreme heat by the agency of high frequency electric current was also exhibited in action in the metallurgy department, the electric induction furnace having the great advantage of generating heat in the object to be melted and permitting of the operation being carried out with a maximum of cleanliness and a minimum of wasted heat. In the concrete testing building, sample floors of large span, constructed of steel joists embedded in concrete, were in process of being tested. The press is capable of dealing with floor slabs and pillars of more than average dimensions, and by its use pressures up to 60 tons can be applied. In testing pillars, micrometer readings for deflection have revealed an initial torsional action of the pillar upon the application of pressure, the torsion reaching a maximum and partially returning towards normal before the ultimate stress is reached.

At the Froude National Tank experiments are being conducted in the steering of ships and in the damaging effect upon the rudder head of putting the rudder over at excessive speed. The efficiency of various forms of propeller is also being tested, the model propellers being designed and made in the Laboratory. The stability of sea-planes in starting or alighting upon the water is also being experimented with in the tank.

The buildings and equipment are excellent. A uniform type of structure has been adopted with red brick walls and brindled dressings externally arranged in the simplest and most straightforward manner. The great wind tunnels of the aerodynamics department are also interesting as exhibiting some exceptionally fine pieces of joinery, particularly in connection with the curved funnels leading up to the fan chambers. Minor fittings of great technical suitability, devised and made in the Laboratory, abound in all departments.

Scottish National Library.

The Prime Minister announced in the House of Commons that Mr. Alexander Grant, of Messrs. McVitie & Price, of Edinburgh, had offered £100,000 as a permanent endowment of the proposed Scottish National Library. This gift will enable the Government to accept the offer by the Faculty of Advocates of their historic library. Mr. Baldwin had every reason to anticipate that Scotland would soon be in possession of a library in scope and character well worthy of the style of the National Library of Scotland.

Bournemouth Pavilion Competition.

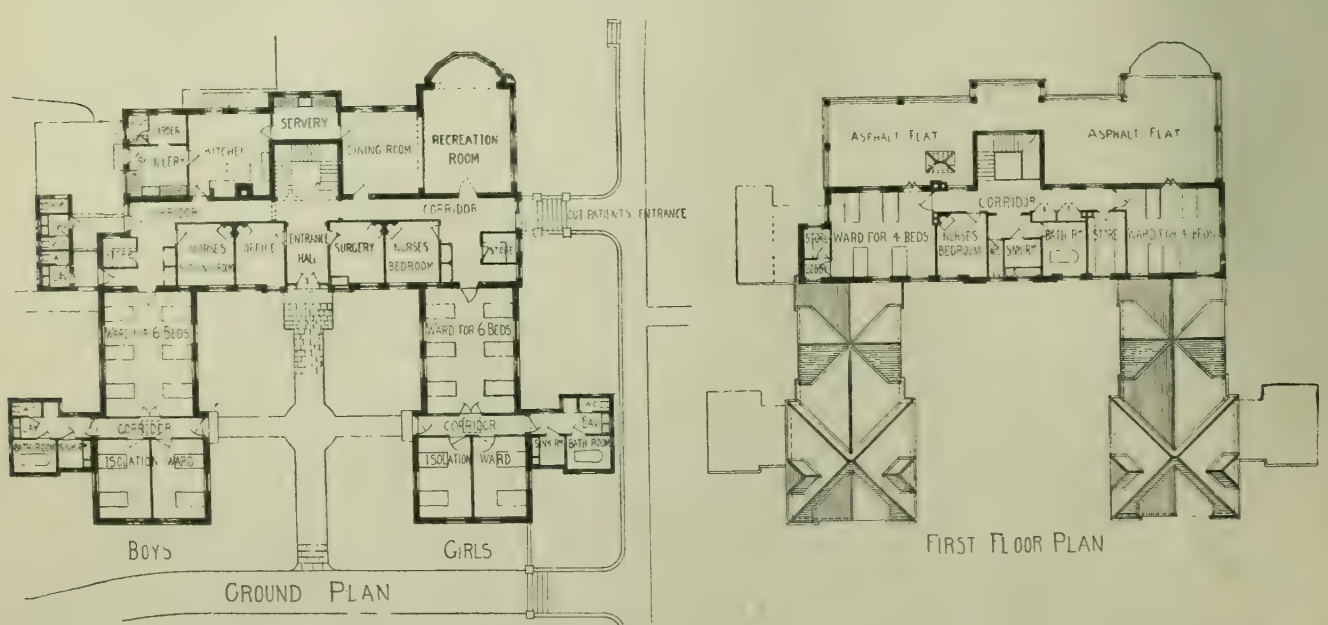
The authors of the design placed first in this competition — Messrs. G. Wyville Home, A.R.I.B.A., and Shirley Knight, F.R.I.B.A.— have sent us the following brief description of their design :—

The planning generally has been carried out on broad direct lines, the flow of the public from portion to portion of the building having immediately called for an arrangement of corridors and staircases with an absence of angles and deviation of line generally associated with intricate planning. Excavation of the very steep site has been avoided except at the south-east corner. The northern end of the ground floor plan follows an average of the line of the existing retaining walls.

The building generally is roughly divided into two parts—the Concert Hall and the Restaurants—while between these two blocks are placed a pumping station, workshops and storage in connection with beach repairs.

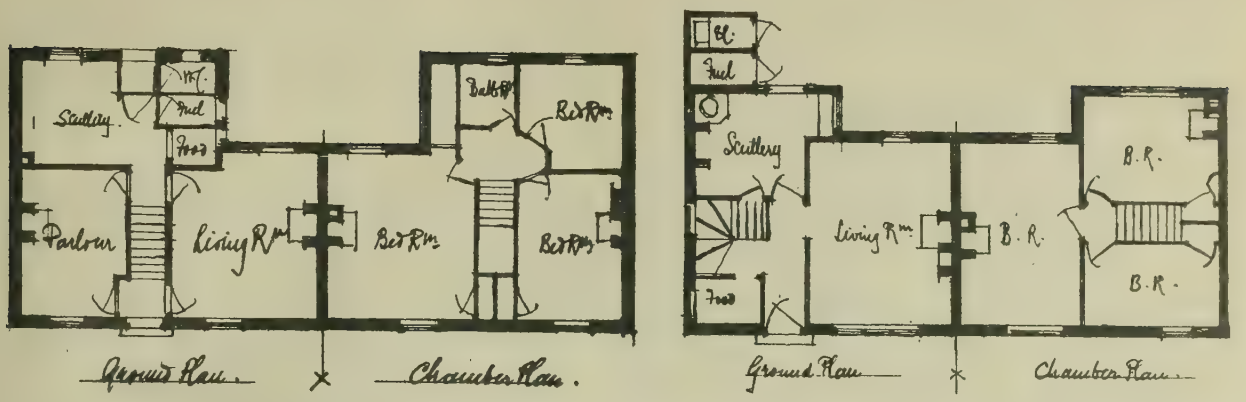
The Concert Hall has been designed so that it can be used for either concerts, operatic, dramatic or cinematograph performances. The hall seats 1,300 on the ground floor and 700 in the gallery, which also has a promenoir on all three sides. The silence corridor on the ground floor is also used for purposes of access to the restaurants and tea rooms, &c. The stage accommodation has been planned to meet the various requirements according to the uses to which the building will be put, including five large dressing rooms for theatrical artistes, band room and green room, &c.

The restaurants have been planned together with the tea rooms and balconies to seat over 1,450 people, and have extensive sea and garden views. A great feature has been made of these balconies, which extend around three sides of the building at the southern end. Great importance has been attached to the intercommunication between this suite and the Concert Hall, enabling patrons to leave the hall and obtain quick access to any of the various rooms, while kitchens of an extent demanded by modern requirements have been provided for their service.



With regard to materials, purple facing bricks with stone dressings and red pantile roofs have been specified, while for internal effect reliance has been placed almost entirely on colour decoration. In accordance with the conditions the plans are coloured, showing what portion can be erected for the sum of £100,000, and the total estimated cost of the complete building is given at £126,171. The second and third premiated designs by Messrs. H. V. Ashley & Winton Newman, FF.R.I.B.A., and Messrs. Collcutt & Hamp and Mr. J. F. Watkins, are also illustrated this week.

The National Bank, Liverpool.



This building is of steel-frame construction, with main elevations to James-street and Fenwick-street of Portland stone. The floors throughout are fireproof construction of hollow reinforced concrete, cast *in situ*, with oak wood-block covering to all offices and corridors. Central heating is installed on the low-pressure, hot-water system, with radiators under windows on each floor. In addition to the radiators, fireplaces will be provided and the smoke extracted by induced draught through electric fan chambers on the roof. Ventilation is by ducts connected to extractor fans, which draw up all vitiated air. In addition, natural ventilation will be provided for by vertical pivot-hung casements. The building will be lit throughout with electricity, and gas will also be laid on. There will be, in addition to the banking premises on ground floor and basement, seven floors of offices, with sanitary accommodation on the eighth floor, comprising in all nine stories. Motor-rooms, fan chambers, and water storage tanks are constructed on the flat roof. The various floors will be reached by a reinforced concrete fireproof staircase and two electric elevators. Storage compartments and fuel lockers will be provided for each tenant in the basement.

The National Bank occupies the ground floor and part of the basement. The banking hall is approximately 70 ft. by 50 ft. and 17 ft. high, with rooms for the manager and sub-manager, and also a waiting-room adjoining. The banking hall is entered from a central position in James-street through revolving-doors, the public space and counter being planned semi-circularly on this axial line. For the staff immediately occupied at the counter the "compartment" system has been adopted. The compartments are divided from each other by glazed screens and bronze grilles. The scheme of decoration in the bank is as follows:—Dado of polished Hopton Wood stone with black marble skirting; frieze, cornice, beam casing, and ceilings in enriched fibrous plaster. The columns and pilasters are of green scagliola marble standing on black marble bases and terminating with fibrous plaster capitals. The floor of the public space is paved with black and cream marble in a radiating "key" pattern. The counter, screens, and desks are all in Cuban mahogany polished to a dark colour and dull gloss, with *carton-pierre* ornament. The general basis for the design of the decoration is Greek. Large windows on both front and back elevations extending up to the ceiling give natural light to all parts of the banking hall, no artificial lighting being required during the day, and warmth is provided by low-pressure hot-water radiators. Fresh air is admitted through opening sashes in all windows and the vitiated atmosphere drawn off through a ceiling grille by induced draught. The main artificial lighting is obtained by semi-indirect bowls suspended from a central point in each bay of ceiling, and the localised lighting is by standards fixed on screens and desks, providing each separate employee with adequate light for his individual work. The bank's portion of the basement is occupied by the strongrooms and accommodation for staff, stores, &c., with direct access from the banking hall by a private staircase and bullion and book lift. Messrs. T. Arnold Ashworth & Son, of Castle-street, Liverpool, are the architects.

The general contractors for the building were Messrs. William Moss & Sons, Ltd., and the following were among the sub-contractors:—Steelwork, Dorman, Long & Co., Ltd.; bank security, Chatwood Safe Co., Ltd.; heating, ventilating and smoke extraction plant, Richard Crittall & Co., Ltd.; reinforced concrete floors and staircases, J. Gerrard & Sons (1920), Ltd.; plaster work, John Tanner & Son; tiling, Craven, Dunnill & Co., Ltd.; terrazzo staircases and landings and marble divisions to lavatories,

Police War Memorial Hospital, Twickenham.
Mr. H. J. S. Abrams, Architect.

Houses at Dereham for the Dereham R.D.C. **Houses at Wymondham for the Forehoe R.D.C.**

Mr. George J. Skipper, F.R.I.B.A., Architect.

The Arts Pavements and Decorations, Ltd.; grates, E. A. Clark, Ltd.; wood block paving, William Moss & Sons, Ltd.; electric lighting, Boothroyd Repairs, Ltd.; cast iron window frames, staircases, balustrades, and balcony, The Carron Co.; steel sashes, Ockleston, Drayton & Johnson, Ltd.; lightning conductors, Aird & Anderson, Ltd.; stone carving, Martyn & Co., Ltd.; carving on bank entrance doors, Edward O. Griffith; sanitary goods, Musgraves (Liverpool), Ltd., and F. E. Pescod; general ironwork, Geo. Lowe & Sons; locks and furniture, Quiggin Bros., Ltd., and James Gibbons, Ltd.; glazing, J. S. Nicholls, Ltd.; passenger elevators, Express Lift Co., Ltd.

The main contractors for the bank decorations were:—John Tanner & Son; bullion and book hoist, Express Lift Co. Ltd.; scagliola columns, Bellman, Ivey & Carter; revolving doors, T. B. Colman & Sons, Ltd.; marble and Hopton Wood stone in banking hall, John Stubbs & Son. The main contractors for the bank fittings were:—Trollope & Colls, Ltd.; electric light fittings, Simplex Conduits, Ltd.; grilles, &c., to bank, James Gibbons, Ltd.

Metropolitan and City Police War Memorial Hospital.

This building has been erected in the grounds of the Orphanage at Strawberry Hill as a permanent memorial to the memory of those officers of the Metropolitan and City Police who made the supreme sacrifice in the war, and to provide the requisite treatment and care for the children of the Orphanage.

The hospital has been designed to receive those cases that are constantly occurring in a residential institution of this description, and where immediate treatment can be given under constant supervision without losing touch with the home atmosphere.

Provision has been made for (1) minor ailments which receive out-patient treatment allowing the patients to continue with their studies; (2) a general ward to accommodate six bed cases; (3) a small ward for four bed cases; (4) two isolation and observation wards each for two beds; (5) open-air treatment.

In all the above, except the out-patients' department, separate wings and accommodation have been provided for each sex.

In planning the building special attention has been paid to the fact that the number of cases for treatment will vary to the extent of using the whole of the beds down to only one or two minor cases, which will necessitate the closing of practically the whole of the ward accommodation, but still maintaining separation of the sexes and complete supervision.

A recreation room for convalescent patients of both sexes is provided, with a dining-room adjoining, separated by a movable partition to enable the two rooms to be thrown into one when required.

The administration offices have been centralised and reduced to the minimum consistent with efficiency.

The building is constructed in brickwork faced with special Crowborough bricks, red brick arches, Portland stone dressings, and covered with thick Westmorland slates laid in graduated courses.

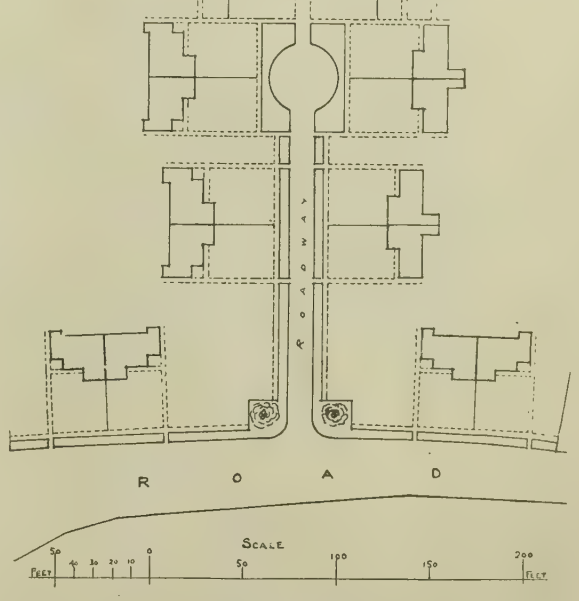
The general contractors for the work are Messrs. John Laing & Son, Ltd., of Carlisle. The sub-contractors employed are:—Fireproof floor construction, Messrs. Homan & Rodgers; heating and hot-water installation, Messrs. Young, Austen & Young; sanitary fittings, Messrs. Farringdon Works, and H. Pontifex & Sons Ltd.; wall tiling, Messrs. W. B. Simpson & Sons; ironmongery Messrs. Comyng Ching, Ltd.; wood-block flooring, Messrs. Jefferies & Co.; electric wiring and bells, Messrs. Read & Partners; fire alarms and appliances Messrs. Fredk. Hodgson & Son. Mr. George Jones acted as clerk of works.

The architect is Mr. H. J. S. Abrams, of 19, Buckingham-street, Strand, W.C.2.

Cottages in East Anglia.

Mr. George J. Skipper, F.R.I.B.A., is the architect of the cottages illustrated this week.

The ten houses on the Wymondham housing scheme for the Forehoe Rural District Council, are of the non-parlour type, and were built at the end of the Government's late housing scheme. Mr. Bidewell of Wymondham is the contractor.



The Holt housing scheme, for the Erpingham Rural District Council is near the Norfolk coast. The scheme is carried out in flint, which abounds in the gravel pits of the neighbourhood, with brick dressings, &c. The contractor, Mr. Bullen, of Cromer, has carried out the architect's ideas so as to produce a characteristic piece of local work. All the houses are of the parlour type. There are in all sixteen houses on four acres of land.

The East Dereham scheme is for the East Dereham Urban District Council. These ten houses of parlour-type in pairs, are erected on the Norwich road. There is plenty of clay suitable for "lump" making in Dereham, but preparations for its use could not be made in time, so that bricks were employed for the walls. Mr. Greengrass, of Norwich, was the builder.

THE BUILDING ART: THEORIES AND DISCUSSIONS.—VII.

By W. R. LETHABY.

CLERKS AND ARTISTS.

"*Painters lived like other craftsmen and were paid according to a fair scale; they lived simply, and their work was first of all good and next beautiful.*" (Sir M. Conway, "The Van Eycks.")

One general characteristic of the time we have been going through has been the emergence and domination of the clerkly kind of person, the official, the organiser, the recorder. Of course, he has been necessary up to a point—in the kind of world we have made. But it may well be doubted whether the development has not gone—or may not go—too far. All that the system involves has never been seen. Even the thing itself has hardly been understood—the necessity that organising persons should magnify their office, entrench their position, and tend to increase, while those they organise are step by step subjected, eliminated, and destroyed.

Again, the chief clerk always requires more and more junior clerks, and the clerkly sphere tends to become a self-justified mechanism, whizzing round by its acquired momentum. When it is in going order a reciprocal action is set up between the head of a "staff" and the members of the clerkly body among themselves, more and more regardless of the world outside and final objectives. Sometimes a man at the centre of control seems to become the creature of his band of clerks, who brings before him the details of business so dexterously that he does little more than select among alternatives and approve and sign documents already prepared. Put extravagantly, it may be suggested that public organisations of the modern type tend to be run by the office boys.

One of the pressing needs of a reasonable modernism in architecture is to understand the relation between organisation and workmanship, between ordering clerkship and executing art.

. . . . . .

The modern architect, by professing expertism in style-tasting, is liable by the very nature of things to fall into opposition to a general distributed excellence of building. The whole history of "architectural" fashions in the nineteenth century shows it. About 1800, not to go back further, a way of building had come to be generally accepted and understood. It was founded in part on the practice of Wren, Gibbs and Adam—that is, some notion of "style" had been absorbed by the builders and workers of the country—but building *custom* was also carried forward by them independently. They knew what windows, doors, fanlights and mouldings were, as well as the professing architect. Indeed, some of the best and, I think, quite the most interesting building in the country was just done all in the day's work. Moreover—and this is an intermediate element of the same phenomenon—

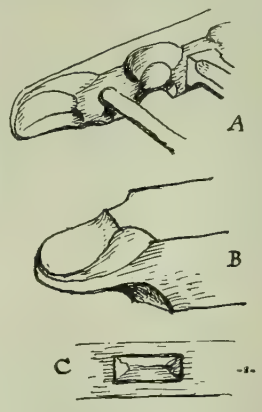

FIG. 2.

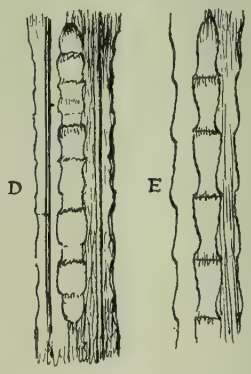

FIG. 3.

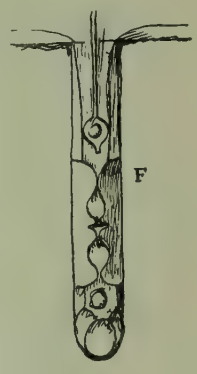

FIG. 4.

country architects of the half-builder kind did work which is even now academically recognised. Really delightful things were produced, which were fairly modern and at least half-living, although they had been reached by way of what we think of as the "classic style." Craftsmen thoroughly mastered their trades. The refined joinery of mahogany doors, thin barred sash-windows with their ingenious shuttering, staircases with complicated geometry and hand-railing, were all reasonable, civilised and rightly "commonplace." The cast-iron work of the same time—grates, balconies, and balustrades—was of extraordinary excellence, really perfect of its kind; and all or most of this seems to have been done in the ordinary way of trade. The plasterers, marble masons, and the rest, all knew what they were expected to do, and did it. There was still room for craftsmanship, although it may have been of a secondary order. The workman had not been completely beaten down to a hand executing he knows not what. Still, the thought lasted on that architecture was solid workmanship, not a phantasy in the air.

This settlement was not to be tolerated by designing architects, who are impelled by the nature of their being, as now conceived, to superior views which cannot be understood by the common people. The Gothic revival gave them a new chance to be priests of a superior cult—not that they understood the forces that were pushing them on—and they enthusiastically set about ordering the workmen to alter their manner of work. For neatness and precision, they were to substitute the rough and ready; smoothness became a thing to mock at; and "texture" was the cry. Of course, the attempt to "revive the Gothic style" fell in—or, at least, was contemporary with—a whole movement associated in literature with Wordsworth, Scott, Ruskin, and others; but architects were the guardians of building customs and had a special responsibility in the matter. As it worked out in the sphere of building, the whole thing was a tragedy, for in aiming at a higher theoretical ideal a lower level was reached in real practice. At the same time it should be recognised, and this may be a net gain on the whole transaction, a much wider scope was given to our ways of approaching building problems.

From about 1870 arose the cut-brick and terra-cotta "revivals" and the workmen had to find out ways of rubbing specially made bricks and setting them with fine white putty joints; also the making and use of terra-cotta. These booms lasted only about twenty-five

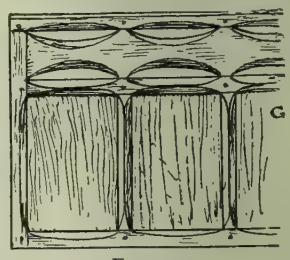

FIG. 5.

years as against the fifty of full "Gothic" vigour and two hundred of the "antique." At one time, however, there was such a rush for rubbing bricks that classes at ratepayers' charges were set going in Polytechnics to teach the new style of whim-work required by the eminent architects of the moment. Then, in a few years, as the builders themselves got hold of the tricks, the "style" fell dead as Queen Anne herself, and the specially trained workmen were no longer required. The waste of all this is obvious; but the material waste, which we reckon up in pounds, is nothing to the human waste, the futility of it, the puzzlement in the minds of the building artists who so patiently carry out our clerkly commands. The suggestion I am trying to bring out is that modern architecture which professes to supply correct "style" *must* always be "changing its front" to remain in front; as says a nice Chinese proverb I saw quoted the other day: "He who rides a tiger cannot dismount."

. . . . . .

To try to come to some general conclusions, I would suggest that there is a deep difference between the very nature of ancient and modern

FIG. 1.

architecture. The ancient was necessarily an expansion and experimentation in workmanship; it was an art. The modern is a feat of clerkly organisation—a profession. I have not in mind now anything which I think a fault, but only a question of fact. It is necessarily the same with all forms of large modern production. Ship building has become naval architecture under highly-trained direction. Engineering is only another form of architecture which has developed under the charge of scientific experts. We may hope to continue to find a place for architecture which pretends to be "style," but I believe and hope that such bluff stuff will not last much longer. Either architects will change their ideas of what they are about and aim at being modern organisers of efficient building, cutting away sham art and style nonsense, or they will be superseded by other types more like we might conceive building engineers to be if they, too, were not what they are. The modern architect must come out of his bogey-hole of myth and make-believe and work in the open, aiming at precision and perfection, and giving a fair opening to the artists whom he organises from bricklayers to sculptors and painters. It is his duty as a distributor of patronage and employment to see that he calls for fine types of workmanship. He is not only erecting architecture, but he is building lives as well. I would suggest, as a general rule, that there can be no "decoration" which is not vital workmanship; and none should be tolerated which is not by a free artist. Scientific structure and personal ornamentation is the thing at which to aim.

Fig. 6.

While I am writing this, illustrations are published of some newly-discovered Pompeian wall painting from a series in "A Shop in the Street of Abundance." These are typical decorations, seemingly as good as others found in the better houses. Evidently—and this is the point—they must have been the common "painter and decorator's work" of the time done at ordinary ancient rates of wages. One of the paintings is really like a Watts—a tall, graceful woman half leans on a winged Cupid, while two others fly towards her with wreaths.

It is common knowledge that mediæval decoration was ordinary journeymen's work, and I am convinced that we could have it so now, if we wanted it. Our workmen—"the British workmen" of the scoffer—are amazingly skilful of hand and adaptable, if only we would employ them for human workmanship instead of for blank slavery. Only two or three centuries ago the words "artist and artizan" had not been differentiated.

Perhaps someone may be inclined to ask, "What does it matter? Why should we worry: and isn't one way of building as good as another if it pleases those who have money to spend?" One great reason is that of loyalty to those we are supposed to lead and represent, but of whom nothing is ever said in architectural discussions. The next is that of loyalty to ourselves, for "architecture" as it is practised makes the kind of men that are architects. The next is loyalty to employers, our people, and country. Another is loyalty to our ancient art itself. Architecture was made for man, not man for the architecture of architects.

. . . . . .

In a generation or two it may be possible to deny that works of craft which are also works of art were ever freely created by labourers just doing their work without any superior designing person standing over them and telling them what to do. It may then be possible to assert that works of beauty were all and always designed by R.A.'s. Still, up to this very day things are made in the ordinary ways of craft which are so perfectly beautiful and right that no one takes any notice, but accepts them for granted. Such are basket work, farm-gate making, boat building and, above all, wagon building (Fig. 1). Wagons have been made in this century and are still being made here and there in country districts, which seem to me quite perfect. In them most of the mysterious questions which bother us so in architecture as to the relation of structure to use, and ornament to structure, seem to be triumphantly solved by doing it in the traditions of workmanship. In a cart-shed close by where I am staying are a wagon, two butts, and a wheelbarrow, all simply right and kin to the fine craft-art of the world. The wagon is really an extraordinarily intricate piece of work, but it looks as easy and simple as if it grew. The whole is obviously in perfect "proportion" and admirably strong. Interposed between the back axle and the body is a sort of rack of open framing to give spring. It is framed up of stuff cut in graceful curves, finished with most ingenious and inventive chamferings and covered with gay red and blue paint. The complicated iron work, stays, straps, and bolts is equally perfect. The sketches here given are of little details (Fig. 2). A and B are terminations of rails, C is an ordinary tenon, D and E are examples of chamfering (Fig. 3). F of chamfer on chamfer; (Fig. 4). G is from a lighter cart which came up to the gate the other day (Fig. 5). Some of the chamferings of the wagon are picked out in two different colours and the painting is finished with firmly-struck lines and flourishes. These cart builders have the secret of decoration as well as of craftsmanship. One of these masterpieces was dated 1922. From the wagons I pass in H to the cart-shed (Fig. 6), and in Fig. 7 to the farm. The buildings are as admirable—indeed perfect—as the carts. From the look of it I should think the buildings were erected about 1850; they are evidently the

Wiltshire Farm Buildings.

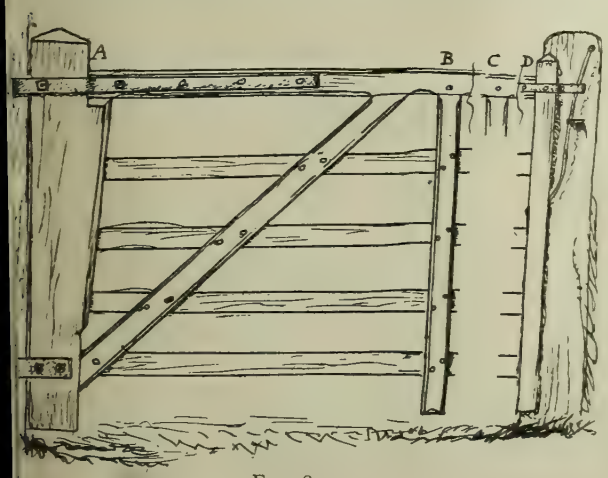

Fig. 8.
The Intervals to B, C, D are about equal, but there is only one Strut.

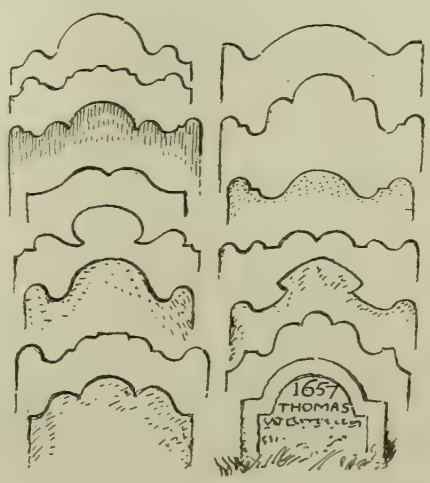

Fig. 9.

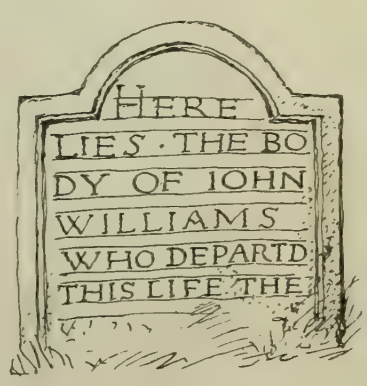

Fig. 10.

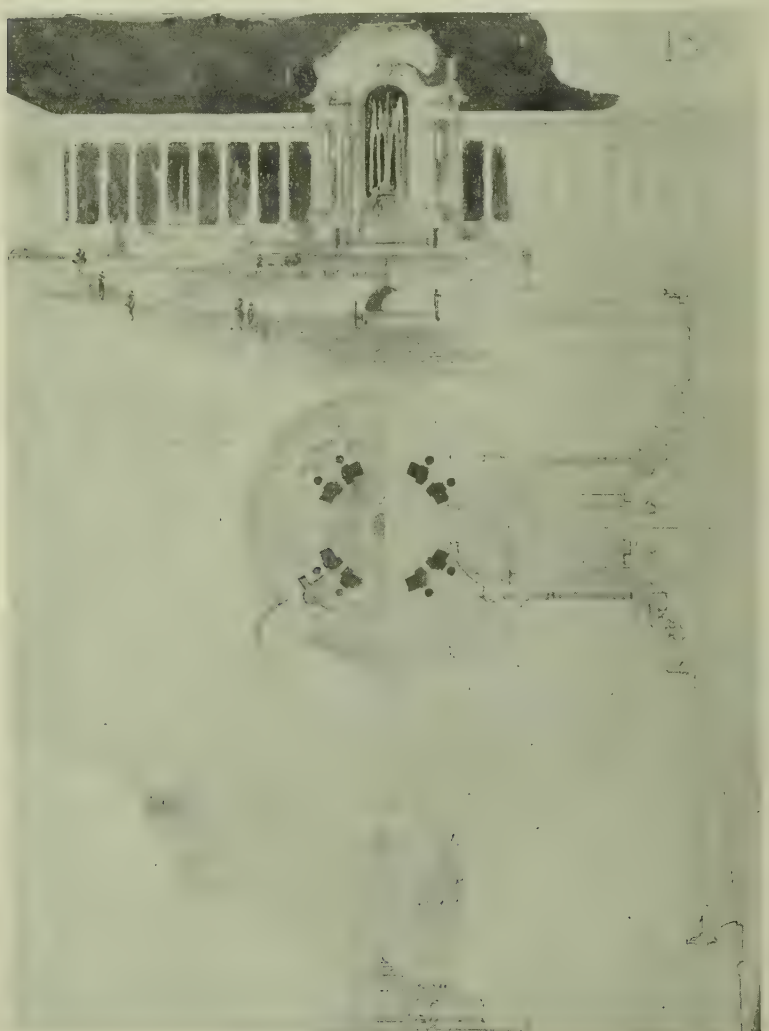
result of local endeavour, thought and material, and skilled craftsmanship. Of such is the beauty of England.

Again I have been "out for a walk" and have found a field-gate which has just been put up; this is doubtless a work of art of the present year (1923) and it is a beautiful traditional piece of work. The stock is of heavy stuff and supports the top rail in such a way that the weight is taken on a cantilever. It is of oak, neither rough nor smooth in finish, just workmanlike, and again perfect. A thing like this could not be designed by a designer; it is the resultant of long evolution for fitness and economy (Fig. 8). The size is 10 by 3½ ft. From here I go into the beautiful old churchyard and study the tombs. They were customary, reasonable and right up to about 1860, when "art" anarchy set in. Fig. 9 gives a selection of the forms, all natural and playful variations on the rounded top. The first date I found was 1657; earlier inscriptions are simple and in one kind of lettering (Fig. 10). Later ones have verse compositions—home-made, we may suppose, as they should be.

"Whilst here on earth I did remain
My latter days were full of pain;
But God, whose mercy's ever free,
Hath from these pains released me."



The headstones, dated about 1800, have delicate scroll work in the lowest possible relief. All are in local stone; the earliest were doubtless done by the village mason; the later and more ornamental were from some regular tombstone maker in the market town. All are natural products of workmanship.

. . . . . .

Again a cautionary postscript must be added. When the words modern and modernism have been used I have meant the real thing, not any pretence that may be called by those names. By modern building we should mean logical, serviceable, economical and convincing realities, not just another way of "making faces." It is next to impossible, however, to think of architecture except in terms of "style," for our whole minds have been trained and twisted to see things in that way. Only in to-day's paper some illustrations are given of buildings at the Swedish Exhibition at Gothenburg which are labelled "Modernist Architecture and Decoration." These things are modern only in the sense that they are the latest, but they are in very fact more *style conscious* than older buildings with the accustomed labels.

Some illustrations appeared in *The Builder* of June 1 from an Exhibition of Dutch Students' Work at the Architectural Association. These, again, if I may say so, seem to me "style designs," not building projects. Even in a so-called "Classic" or "Gothic" design we should see more of the reasonable necessities of lighting and roofing than here. These designs look like projects for Doom dungeons in a new Apocalypse of terror. It is curious, indeed, and symbolic, what dislike to the need for plenty of light in our northern countries is shown in the "art designs" of Ateliers—it recalls the saying, "their deeds are evil." While "style" is in the mind the effort to produce something "original" and up to date will only intensify artificiality. This, I believe, is good psychology, and we can only lesson the evil of the style mania in the degree that we cease to worry about it and *think of something else*, as, for instance, lighting, use, construction, economy. Sham style can only be avoided by going around the corner.

Such frantically furious "original designs" are not truly projects for modern buildings for daily use any more than were certain strange designs of twenty years ago, conceived in style and misshapen in absurdity and called "New Art." Although it seems almost beyond our mind's power to imagine of architecture as other than style, yet we do not think of ships and cranes or ploughs and haystacks as exercises in style. We think of these things as things indeed. The very beginning of better wisdom in building can spring only from a renewed ability to see buildings behind their disguising and usually disgusting masks of style. In forgetting style we should find it, not that its recognition is of much importance anyway! "Style" is conceived as the look of a thing. If we could have sound, warm, well-arranged, properly lighted buildings made by men who cared, the works would have *that style*. Think of service, soundness, structure, and the style will take care of itself. I would commend to your consideration the admirable saying of the late Mr. Philip Webb: "I am never satisfied until my things are commonplace." We go on working by "taste," even in fields where definite rulings of science and sense have long been known. The question of lighting followed up would revolutionise our style, so would the ideas of perfect structure and right use of materials. The architecture of shows and shams will some day have to give place to honest human building, and the clerkly architect will have to get higher types of workmanship from the artists who do the actual work.*

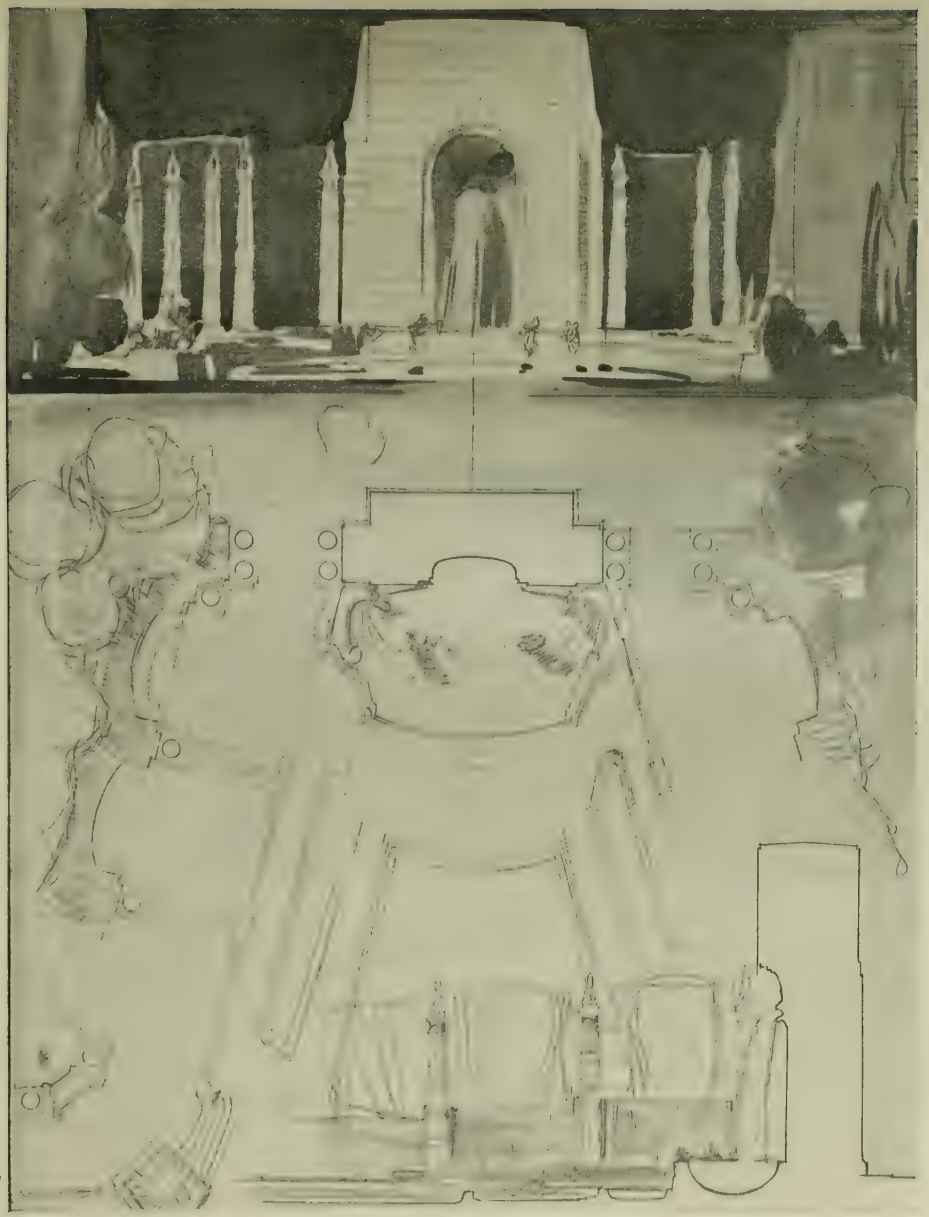
DEVON AND EXETER ARCHITECTURAL ASSOCIATION.

The annual meeting of the Devon and Exeter Architectural Society, which embraces Devon and Cornwall, and is in alliance with the R.I.B.A., was held on Saturday at West Southernhay, Exeter. The chair was taken by the President, Mr. Percy Morris, F.R.I.B.A. (Exeter), and those present were Messrs. A. S. Parker, R. A. Mill, F. A. Vercoe (Plymouth), L. F. Tonar, O. Ralling, J. A. Lucas, W. J. M. Thomasson, A. J. Pinn, A. Cunes and J. Challice, Asst. Hon. Secretary (Exeter).

The annual report showed a total membership of 94, an increase of four on the year. Several matters affecting the profession were dealt with.



The Chairman expressed regret at the Society's loss in the death of Mr. James Crocker, a past president.

The president then delivered his address, a report of which we hope to give next week.

The following officers were elected for the ensuing year:—Mr. Percy Morris, F.R.I.B.A. (Exeter), President; Messrs. Allan J. Pinn, A.R.I.B.A. (Exeter) and B. Priestley Shires, F.R.I.B.A. (Plymouth), Vice-Presidents; Messrs. R. A. Mills, A. S. Parker, C. S. Appleton, F. H. Hooper, and O. Ralling were elected members of the Council, and Messrs. F. R. Tothill and S. W. Ackroyd, Associate Members of Council. Mr. S. Dobell was re-elected Hon. Treasurer, Mr. A. R. Holman, Hon. Secretary, Mr. J. Challice, Hon. Asst. Secretary, and Mr. L. F. Tonar, Hon. Auditor.

Subsequently members lunched together.

* Since this was written I have seen a review of "*The Wheelwright's Shop*: *by George Sturt*": "All the seeming quaintnesses of ornament, save for a line of beading and a device on the heads of iron stays is entirely the result of adaptation to necessity. The chamfering is to reduce weight, the curves are devices for getting capacity and load. Wagons grew into beauty not to please artists but to satisfy carters and to suit the field and road."

THE SURVEYORS' INSTITUTION.

CONFERENCE AT EDINBURGH.

The Surveyors' Institution held its annual conference in Edinburgh from June 27 to June 30. For the first time in the history of the Institution a surveyor practising in Scotland is President, namely, Mr. J. I. Davidson, Saughton Mains, Edinburgh.

On Wednesday, the opening day, a reception was held by the President in the North British Station Hotel, when about 200 members were received. Among those present were Sir John Oakley, London, past president; Sir Edwin Savill, vice-president; Sir Edgar Harper, Chief Valuer for England; Mr. J. D. Wallace, Official Arbitrator for England, senior vice-president; Mr. J. M. Clark, Northumberland, past president; Mr. John Willmot, Birmingham, past president; Mr. Dendy Watney, London, vice-president; Mr. Reginald Powell, Sussex; Mr. J. A. Rutherford, Berkshire; Mr. Napier, Bristol; Mr. F. Tuckett; Mr. A. G. Cross, London; Mr. J. Campbell Murray, Glasgow, chairman of the Scottish Branch; Mr. James Mather, of the Board of Agriculture for Scotland; Mr. Alex Blair, Chief Valuer for Scotland; Mr. Wm. Fraser, Glasgow; Mr. T. P. Marwick, Edinburgh; Mr. Thomas Blair, Hoprig, East Lothian; Mr. J. Lyon Guild; Mr. W. W. Philip, Lanark; Mr. James Barr, Glasgow; Mr. G. B. Mitchell, Aberdeen; and Mr. A. Goddard, London, the secretary.

On the following day the Lord Provost of Edinburgh and Magistrates received the members of the Conference in the City Chambers, and offered an official welcome on behalf of the City.

After the reception by the Lord Provost, the President took the chair, and the remainder of the morning was devoted to the reading of papers.

Mr. T. P. Marwick (Edinburgh) read the paper on "Edinburgh: its Rise and Progress," which he gave at the recent R.I.B.A. Conference, and a summary of which appared in *The Builder* for June 22.

British Forests and Home Timber.

Mr. John D. Sutherland, of the Forestry Commission for Scotland, read a paper on "British Forests and Home Timber." He said that this country possessed less growing timber than any kingdom or Dominion; in fact, our woodlands were infinitesimal, and our reserve of wood the most meagre in the world. It was doubtful if the marketable woodlands in the country at the present time covered 3,500 square miles (2,000,000 acres). A census was being taken by the Forestry Commission, by which this estimate would ultimately be corrected. Of these woodlands less than one-tenth could lay claim to the description of true forest. A real or true forest should embrace a block of 1,000 or more acres of woods and plantations, properly stocked and grown in regular rotation. It was the extensive, well-cultivated agricultural farm that produced the largest crop, and it was precisely the same with sylviculture. The more comprehensive the forest, if well managed, the better the crop. The State was now creating forests, and the Forestry Commission since 1919 had planted 30,000 acres. Owners of property were restocking their woodlands, but there was no co-operation among them for the formation of forest blocks, and he suggested that it would be to their advantage to combine, so that by united effort forest centres might be formed. Inquirers asked whether there was any commercial promise in the creation of forests. It appeared to him that there never was a time when the prospect of a reasonable financial return was better than now. The prices paid by this country for imported soft-woods, which could be well grown in Britain, had gone up between 1890 and 1922 from 105 per cent. to 200 per cent., and in the case of Archangel red deals as much as 270 per cent. Manufactured home soft-woods had increased in the same time by from 73 per cent. to 80 per cent., and standing timber of the same class was 80 per cent. to 90 per cent. dearer than in 1890. He represented that increasing consumption, combined with the curtailment of supplies, must tend to raise the value of wood grown in this country, and therefore benefit the enterprising planter. He concluded by inviting them to support co-operation in forest block construction upon the lines suggested, and in particular asked them to advocate the use of home-grown wood throughout the country.

Rating and an Income Local Tax.

"Rating and an Income Local Tax" was the subject of a paper by Sir Henry Keith. He outlined his scheme for a new system of rating and an income local tax. The Inland Revenue officials, he said, who had criticised his scheme, spoke of the enormous labour it would take to administer. As a matter of fact it was simplicity itself compared with the existing income-tax system. The only efficient substitute for rates was one which as nearly as could be devised placed the cost of all national and quasi-national services—such as education, public health in every form, police, poor relief, main roads, public institutions—on the basis of ability to pay, and services which were directly and peculiarly beneficial to individuals or property on the basis of benefit received. He retained the skeleton of the rating system for the latter purpose and for collecting the cost of non-approved or non-recognised expenditure. The removal of onerous rates from houses would give an enormous natural impetus to building, to the improvement of housing conditions, and it would establish economic rents. Legislation to abolish or modify rates by substituting an income tax would also require in Scotland to provide for the reduction of rents by the amount of owner's rates cancelled. By the removal of rates, manufactories and industries of every kind, subjected to rates alike in bad times and good, would be relieved of an incubus that sometimes imperilled their existence; by their removal, social progress would not be hampered by the limitations imposed by the rating system; finally, the development of land would be stimulated and encouraged by the knowledge that there would be no punitive tax placed on its mere ownership, but that its revenue-yielding capacity would be the measure of its contribution to local and national needs.

Figure of Joan of Arc, Winchester Cathedral.

Designed by Mr. J. N. Comper.

[This figure, which was recently unveiled by the French Ambassador, was executed by Mr. W. D. Gough, of Kennington, and decorated by Mr. H. A. Bernard Smith, of Staple Inn.]

In the course of the discussion Mr. Brickwell, C.B.E., London, said that if they adopted the proposition of Sir Henry Keith they, as surveyors, were invited to commit suicide. He reminded Sir Henry Keith that the basis of contribution of local rates placed on the rent which the property would let at from year to year had been, so far as England was concerned, in operation for the last 400 or 500 years. He disagreed with the lecturer's proposals.

Sir Henry Keith, in reply, said he was not under his scheme going to abolish the work of the surveyors at all. He favoured the Scottish method of valuation. If they in England had had their system, some of the problems which now arose would have been settled as they went along. The position of the landlord in Scotland was infinitely worse than the position of the landlord in England, but at the same time the system was wrong in both countries. Let them see that every man contributed according to his ability, and give back to the people the money he had received from the people.

The Dinner.

In the evening the members dined at the North British Station Hotel, under the chairmanship of the President. There was a company of 160, which included the Duke of Buccleuch, K.T., Lord Alness, Lord Murray, Lord Constable, Principal Sir J. Alfred Ewing, Sir Henry Keith, Sir Robert Greig, Lord St. Vigeans, Sir Harry Hope, Sheriff Crole, Mr. J. D. Sutherland, Mr. J. Campbell Murray, chairman of the Scottish Branch of the Institution, and Sir John Oakley, past president.

The President proposed the loyal toasts, and the toast of "The City of Edinburgh" was proposed by Mr. John Willmot, past president, and Councillor Deas, in the absence of Lord Provost Hutchison, responded.

Lord Alness proposed "The Surveyors' Institution." He said if there was one lesson which the professions of this country had learned more thoroughly than another it was the advantage of a central organisation duly decentralised to guide its affairs and inspire its efforts. The three ideals which were set out in 1868 when the Institution was formed were—first, intellectual advancement by promoting a better standard of educational training; second, social elevation by raising the status of the profession in the public eye; and, third, moral improvement by fostering the best spirit of professional conduct. These three ideals were conceived rather in the public interest than in the private interest of the profession. In intellectual advancement much had been achieved since 1868, and since

1881 the examination test had become indispensable to membership. It was impossible in these days to exaggerate the importance of the educational branch of the Institution's activities with the growing complexity of civilization in general and of modern legislation, which related to land, rent, finance, rating, and mining. It was manifest that if the surveyor was to march with the times his educational equipment must be exact and comprehensive, and he was glad that their Institution was fully alive to that fact. From a membership of 200 in 1868 their membership to-day approximated to 6,000; therefore, they might regard their past as having been successful, and they might regard the present as being prosperous.

Presentation to the President.

At this stage a presentation of two silver salvers was made to the President, Mr. James Inglis Davidson, by Mr. J. Campbell Murray, Glasgow, on behalf of the members of the Scottish branch, as a mark of appreciation of the services rendered by Mr. Davidson as their chairman.

The President, after returning thanks, said the past few years had marked the breaking up of many large estates and the establishment of occupying ownerships, with its consequent effect on the profession of the land agents. Time would tell whether the altered system would stand the strain of the agricultural crisis through which they were passing as well as the old system did in the 'eighties, when landlords generally met their tenants so generously. One wondered whether the time might not come—if indeed it had not already arrived—when in the much larger problem of maintaining the agricultural labour population on the land and preventing an increase of unemployment, and at the same time maintaining a larger proportion of the nation's food supply, some temporary relief might not be afforded to the greatest of their national industries. This was a matter which affected all the interests in land and the national interest not least.

The toast of " The Guests " was given by Sir Edward Savill, vice-president, and responded to by the Duke of Buccleuch and Mr. J. Condie Sandeman, K.C., Dean of the Faculty of Advocates. The Duke of Buccleuch said it was the duty of those who owned and occupied land and of those who advised them to develop that land to the best of their ability. The one thing they wanted was sound and trained knowledge. He believed the future of this country was bound up with the land and what it produced. He fully believed that the high traditions of that Institution were a great safeguard not only for the security of those who owned land, but still more for the benefit of the nation at large.

The members of the Conference took part in several excursions, visiting the places of interest in and near the city. One party under the directions of Messrs. G. H. A. Connor, Thomas Blair, and J. Lyon Guild, proceeded to East Lothian, where they saw some of the finest farming in the county. Another party, under the direction of Messrs. Alexander Blair, A. A. Ralston, J. T. M'Laren, and James Mather, visited Rosyth Dockyard and Garden City. On Saturday a number of the members visited Longniddry golf course as the guests of the president, Mr. J. Inglis Davidson.

Builders' Deaths.

The death occurred at Driffield of Mr. Joseph Berry, retired builder, at the age of eighty-five. Mr. Berry had been a widower for a number of years, and leaves several sons and daughters. Mr. Berry was the Chairman of the Driffield and East Riding Building Society for some years.

The death occurred at his residence, Glanffwryd, Morriston, Glam., of Mr. James Knoyle, builder, at the age of 43 years. He was a well-known social worker, and leaves a widow and daughter.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

Conference at Leeds.

Over 200 delegates attended the Jubilee Conference of the Institution of Municipal and County Engineers, at Leeds, last week. The proceedings opened on Wednesday, in the Town Hall. The retiring President (Mr. E. J. Elford, Wandsworth) presided during the earlier stages of the proceedings; but afterwards the chair was taken by the new President, Mr. W. T. Lancashire (the City Engineer of Leeds).

The Report.

The report stated that the Council had called the attention of the Ministry of Health to the difficulties experienced by local authorities in disposing of pulverised house refuse, in consequence of the higher rate of railway carriage charged on this material than on other similar refuse. The Ministry was asked to make representations to the Railway Rates Tribunal, and subsequently it was reported that certain reductions had been granted. The Institution expenditure for the year had amounted to £5,343, and, with an income of £6,281, this had enabled £938 to be carried to the accumulated fund, which now amounted to £3,602.

A resolution was adopted having the effect of limiting the future election of members to those who had passed the appropriate examination of the Institution, or who, in the opinion of the Council, possessed such other degree or diploma as was equivalent.

It was announced that Mr. C. Brownridge (Birkenhead) had been appointed Hon. Treasurer in place of the late Sir James Lemon.

The Lord Mayor on Housing.

The meeting was then thrown open to the public, and an official welcome to the city was extended to the delegates by the Lord Mayor of Leeds (Alderman F. Fountain).

The Lord Mayor said it was pleasant to think that there had been in recent years an advance in regard to municipal work, but if some municipal bodies would only give their engineers a chance to make improvements things would have been even better to-day. It was time that the working people had some degree of decency in the places in which they had to live. Day by day there was some thought impressed on the minds of the rising generation, and it was invariably bad if the environment was bad in which they were reared. They all wanted fine cities, and engineers were doing right in meeting together, considering problems and finding solutions to present to their authorities. He urged them to insist upon such schemes being carried out if the necessity for them had gripped them. It was not always correct to consider the financial cost, but to regard the cost in ill-health, disease, and misery among those who were forced to live in and work under unfavourable conditions.

Referring to the new President (Mr. W. T. Lancashire), the Lord Mayor said that he, the Council, and the citizens of Leeds were proud that their City Engineer had been elected to that position. He was a man who, without display or splash, knew his business.

President's Address.

In his Presidential address, Mr. Lancashire said the Institution had now a membership of 3,202. Pointing out that the larger authorities were able to appoint and pay properly for officers, he suggested that in any reconsideration of local government areas the right thing for Parliament to do was to arrange areas large enough to employ well-educated and trained men. This need not eliminate the valuable element of local interest and autonomy. The ill-regulated growth of towns and cities had resulted in housing for the working classes of a nature which now appeared to be, if not a crime, at any rate a fearful waste of life and efficiency. Evidently the view of later years had stirred the country deeply. He had little doubt that in the near future, as soon as the housing shortage was remedied, greater efforts would be made to deal with slum areas. The passing of time also would necessitate more activity in the way of closing the older dwellings and the provision of new ones. The question was whether this process would continue to be without regulation, or whether by the extension of town-planning powers they would have the opportunity of partially rebuilding industrial cities and towns on right lines. The Acts governing town planning were of immense value, and the inclusion in the Bill of this Session of a clause to give longer time for depositing town-planning schemes was welcome news.

Awards.

The following awards were made :—

Richard Pickering Prize and Medal for 1922-23.—Major Leslie Roseveare (Eastbourne).

Premiums for best papers submitted to the Institution during the year.—Messrs. G. A. Ballard, H. Race, T. McLaren, and H. R. Sayer.

The Scorgie Challenge Shield for the district contributing the largest amount per member to the Widows and Orphans' Trust during the year was awarded to the East Midland Division, and the President announced that Messrs. W. J. Hadfield and H. H. Humphreys would also have been awarded premiums, but were ineligible by virtue of their membership of the Council.

In the afternoon the delegates visited Temple Newsam Mansion and Park and Roundhay Park, and were entertained to tea by the Leeds Parks Committee at the Roundhay Mansion. In the evening a reception was held by the Lord Mayor in the Art Gallery.

On Thursday in the Philosophical Hall Sir Henry P. Maybury, K.C.M.G., Director-General of the Roads Department in the Ministry of Transport, delivered an address on road traffic problems.

Town Planning.

On Friday, the concluding day, a morning session was held in the Philosophical Hall, under the presidency of Mr. W. T. Lancashire, after which visits were paid to various works in the city.

An interesting paper was presented under the joint authorship of Mr. J. E. Acfield and Mr. W. Dixon, the chief assistants of the Leeds City Engineer. This dealt with the question of town planning, housing, and reconstruction, and emphasised the importance of regional planning as a means of securing co-ordination in the various schemes now being put forward. The authors gave a detailed account of the progress of the Leeds housing schemes, and discussed the necessity for slum clearances and reconstruction. It was a matter of local and of national importance that the slum question should be dealt with at the earliest possible moment to the fullest possible extent, and that those who had the misfortune to be housed in slum areas should be benefited by the action taken. They would certainly be in a worse position if demolition on a large scale were immediately undertaken.

Major Leslie Roseveare (Eastbourne) declared that the general feeling with regard to the new municipal houses built under the supervision of the Ministry of Health since the war was that they were a misfortune and that the concrete houses were a tragedy.

Mr. E. Willis (Chiswick) urged that the Government should promote legislation, if necessary, to permit the inclusion of existing buildings and developed areas in town-planning schemes in order that the amenities of the whole district should be safeguarded as well as the existing amenities of undeveloped areas.

Mr. A. H. Campbell (Edinburgh) remarked that if the extent of slum property in Leeds was lamentable that city was only in the same position as all large centres of population. In Edinburgh, he said, there were densities of population in slum areas which would appal even residents of Leeds. There were areas where one found 130 to 140 houses to the acre.

Saturday was devoted to a visit to the Leeds Corporation Waterworks in the Washburn Valley.

GOOD WILL IN THE HOUSING CAMPAIGN.

By J. P. ORR.

The purpose of this article is to urge the importance of good will in the housing campaign, and to suggest that the policy of the Government should be directed towards encouraging and rewarding such good will. The chief difficulty in the housing campaign is the difficulty of getting the cost of a reasonably comfortable house down to a figure on which a fair profit can be made without levying a rent beyond the reach of those in need of relief.

There would seem to be less hope of a solution of this difficulty through legislation than through good will. What is wanted is mutual good will—

(i) between capitalists, the building trade, and the community—those who supply houses and those who need them.

(ii) within the building trade—between employers and employed.

(iii) within the community—(*a*) between taxpayers represented by the Government, and ratepayers represented by the local authority; (*b*) between rich and poor—those who have more than they need and those who need more than they have.

As to (i), the effect of good will may be to induce those who hold capital, whether in land or in money, to offer it on easy terms to local authorities, public utility societies, or even private individuals, on condition that it is used for the furtherance of approved schemes for the relief of the many who are suffering from overcrowding or other bad housing conditions. Easy terms would include a low rent for land and a low rate of interest for a long-term loan. If a house costs £400, a reduction of about 1s. 6d. can be made in the weekly rent for every unit by which the annual rate per cent. for debt charges is reduced. A further effect of good will may be to induce building manufacturers, merchants, contractors, and transport agencies to accept a little less than their pre-war rate of profit, paying rather higher wages than before the war, in order that the workers, having more to spend on rent, may command housing of a somewhat higher standard than the average pre-war standard.

As to (ii), good will may induce the employee, in gratitude for his improved wages, to give the maximum daily output of work within his physical capacity. Increase of output reduces the cost and, therefore, the economic rent of houses in two ways: it not only reduces the item of wages, but, by expediting construction, reduces overhead charges, *e.g.*, charges for supervision, hire of plant, etc.

As to (iii) (*a*), good will may induce local authorities to put upon the rates much more than the 1919-21 burden of one penny in the pound, in return for substantial aid from Government. As to (iii) (*b*), good will may create in those who are well housed a readiness to stint themselves and contribute their savings to the public purse in the shape of rates and taxes, to the end that their less fortunate brethren may have better houses. It may be hoped that such good will will draw a response from the needy in the shape of readiness to do with something lower than the ideal standard of comfort, in order that their housing may not involve too heavy a burden on the public purse.

There was a fine manifestation of good will to the needy just after the war, when the community, through their representatives in Parliament, readily adopted the programme put forward by the Government in 1919 for the housing of two and a half millions of workers within three years. This programme put the capital required for the 500,000 houses at £300,000,000, and the loss to be borne by the ratepayers and taxpayers at £6,500,000 per annum for sixty years—*i.e.*, at £13 per annum for each family housed—a heavy burden to add to the already almost intolerable burdens created directly by the war. Good will towards the men who had served the country so well in the war created the early enthusiasm for the principle deliberately adopted in this programme—that the new houses should afford a far higher standard of comfort than the workers' pre-war houses; but good will and enthusiasm soon vanished when the magnitude of the difficulties encountered in the execution of the programme was realised, and it became evident that cost of production was rising by leaps and bounds, and that the public burden would be much greater, and the benefit to workers much less, than was originally intended. It is instructive to compare (A) the main items of the programme with (B) what was actually accomplished.

	No. of houses to end of March, 1922.	Estimated cost in £ millions.	Average cost per house.	Estimated annual loss in £ millions.	Average loss per house.
(A)	500,000	300	£600	6.5	£13
(B)	100,923	190	£1,080	9	£51
% of (B) to (A)	20	63	180	140	400

The programme was, in July, 1921, limited for the time being to 176,000 houses, 35 per cent. of the original programme; but these have not yet been completed. The figures of cost and loss against (B) are those of official estimates given in 1922 for the whole 176,000. If they prove correct, the loss per family housed will be four times the loss originally anticipated, while the whole burden on the public purse for 35 per cent. of the original programme will be 40 per cent. more than the burden originally undertaken for the whole. Small wonder if good will languished; and all the more honour to the Government, the local authorities, and the building trade, if they succeed in reviving it and bringing it to bear on the solution of the housing problem.

Experience gained in the 1919-22 campaign, as reflected in the above figures, shows up the futility of one-sided good will. Initially there was ample good will on the part of the general community towards the needy; but good will in the building trade was conspicuous by its absence, and those who spoke for the needy were perhaps too insistent on the rapid supply of vast numbers of houses, whatever the cost. They thus played into the hands of profiteers, with the inevitable result that the good will of those who had to pay the piper was alienated, and a halt had to be called when barely 35,000 of the dwellings had been completed, and most of these had been let at rents which, though far below the economic rents, were far beyond the means of the great majority of those for whose benefit the campaign had been started.

Taught by this sad experience, let us now consider what can be done by the Government and the local authorities to revive and foster that mutual good will which is so essential to the success of the new housing campaign. Good will cannot be created by legislation, nor can a remote central authority do much towards creating it in distant places. The matter is one for the local authority, for mutual *rapprochement* between all concerned in each particular place. The Government can, however, foster the creation of local good will by offering any subsidy they may have to grant towards local housing first to those local authorities whose housing schemes show the most evidence of this much-needed good will. Such evidence will be found in the shape of—

(i) local offers of cheap land or of capital on loan at low interest and for long periods.

(ii) low tenders, indicating that, thanks to good will, contractors are content with small profits and can find cheap materials and willing workers.

(iii) readiness of local authorities to accept part of the loss on housing as a burden on the rates.

For the encouragement of local offers of cheap land or of capital on loan at low interest and for long periods for local authorities' housing schemes, the Government might appropriately grant cheap loans to local authorities equal in amount to those raised locally. It might be a good policy to charge even less interest than the Government have themselves to pay, and to let the loan run for eighty years. If the Government raise the money at 4½ per cent. and lend it to local authorities at 3½ per cent., the loss to the Government on each £400 house will be only £4 per annum, and this not for the whole eighty years, but only until the original 4½ per cent. loan can be replaced by one at 3½ per cent. The opportunity for this conversion will surely come with the return of prosperity which this housing campaign will materially expedite.

Another way in which the Government can encourage private offers of cheap capital is by refunding for the next four or five years income tax paid on interest on capital lent for approved housing schemes. Income tax has so far reduced 6 per cent. interest on housing bonds to something between 4 and 4½ per cent.; so the proposed concession might be made in respect of capital lent at 4 per cent. for, say, sixty years. The Government would not stand to lose a great deal by this concession: for, conceivably, the capital which they would thus attract into housing would otherwise be sent abroad or put into investments which escape income tax. There would be some revenue in house duty and income tax on the new houses to set against any loss.

For the attraction of capital to private housing schemes nothing is wanted so much as a clear declaration of the Government's policy, by which the doubts and suspicions which deter people from investing in houses may be removed. First and foremost, it needs to be made clear that the Rent Restriction Act is not to have a permanent place on the Statute Book; that interference with private dealings between landlord and tenant by such legislation is to cease on the revival of pre-war normal activity in the building of houses, and is meanwhile gradually to be relaxed; and that there is to be no building by local authorities in competition with private builders. So long as builders do not resume the building of dwellings of the kind most needed in any locality, the local authority must supply the need, with the aid, if necessary, of the rates and taxes; but their schemes should be capable of execution by sections, and they should be prepared to drop a scheme as soon as private enterprise will take over the outstanding sections.

Local authorities might themselves encourage local capitalists to offer housing loans on easy terms by giving them the right to nominate the first tenants for, say, half the houses. They might also assist public utility societies who are short of capital by accepting them as contractors for any group of houses in the approved scheme, and letting them gradually buy both land and houses in the group by instalments of capital and interest in the shape of annual rent for, say, twenty-eight years. This is the plan adopted by the Bombay City Improvement Trust to assist employers in providing dwellings for their employees. Local authorities could materially add to the security of housing investments, and so attract capital to them, by town planning so as to give permanent residential surroundings to new building estates.

The fostering of the good will evidenced by low tenders can best be left to local authorities. The Government cannot do much to help a local contractor; for it is very undesirable that they should again resort to commandeering materials or transport. It is to be hoped that rings, if formed at all, will be broken by exposure to public opinion through the Special Committee recently appointed by the Minister of Health to watch the position, and by the holding up of schemes until materials are available at reasonable prices. Local authorities can provide a strong incentive to that good will which produces industry among workers by making it clear that the object of the housing scheme is to provide good houses *at rents within the reach of workers*, and by announcing the rents for the several types before the building contract is given. They might, further, offer the first refusal of the first few houses completed to men actually working on the scheme.

With regard to the fostering of that local good will which will induce the ratepayers, through their representatives, the local authorities, to push on with a scheme in spite of the burden it may put upon the rates, the most effective policy will probably be for the Government to give local authorities a very free hand in the preparation and execution of their schemes, while at the same time requiring them to give the fullest publicity to all details of the schemes. The Government should, I suggest, consider all local protests against any scheme before approving it; but, if a scheme is solidly backed by local opinion, they should not refuse to aid it just because the number of houses per acre is not as low, or the standard of accommodation not as high, as in the majority of the expensive post-war schemes heretofore sanctioned. Nor, in my opinion, should a scheme be rejected just because, with a view to reducing the loss, it provides some types of houses at rents beyond the reach of the lowest-paid workers. The scheme should provide for all or any of the working classes (including clerks) who are compelled through shortage of houses either to pay unduly high rents, or to live under conditions of overcrowding, or at an unduly low standard of comfort.

Each scheme should be considered as a whole, and not scrutinised as to its financial effect in regard to particular types of houses. It may sometimes be wise to include high-standard houses at high rents for families with several earners, as well as small houses at lower rents. There will probably be a lower average loss per family in such a scheme than in a scheme which caters only for the poorest.

Local needs are better known to local people than to the central Government, and now that local rates have to bear a substantial share of any loss on the scheme, the Government, as representing the taxpayer, need not do more than insist that on the whole scheme:

(*a*) the average capital cost per family shall be within a prescribed maximum. (This determines the maximum annual cost to the taxpayer.)

(*b*) the rents shall be within prescribed limits.

The prescribed maximum cost and the prescribed rent limits need not be the same for all times and all places. There may be justification for a general reduction of the maximum as money becomes cheaper. There may be some places in which housing has always been more costly than in others. There may be rural areas in which the earning capacity of the people is too low to permit of their being housed at a reasonable standard of comfort at as high rents as elsewhere. There may be other places in which people have got on well enough hitherto with something less than the average standard of comfort, and would prefer to adhere to that standard rather than adopt a higher one at the cost of higher rent.

The estimate submitted to the Government for approval should assume that a Government loan will be forthcoming for half the cost at 3½ per cent. interest for eighty years. If on this assumption it is estimated that the capital cost will be within the prescribed maximum, then ordinarily Government sanction should be given at once. In cases in which the annual loss to the local authority is much less than the loss the Government incur by their loan, the period of the loan might be reduced so as to establish equilibrium between the two losses. In cases in which the local authority's loss is far heavier than that of the Government, it may be feasible to establish equilibrium by grant of the taxes and house duty on new houses to the local authority for a few years. In other cases the Government may make this special grant, in order to enable the local authority to raise the standard of accommodation or to decrease the rents, or to encourage co-operation by public utility societies by passing the grant on to them for houses they build.

Take, for instance, a scheme of 500 houses estimated to cost £200,000.

		Average per house.	
Debt charges on Government loan of £100,000	£4,000	£20 0	
Debt charges on Local loan of £100,000	6,000		£28
Annual outgoings (maintenance, repairs, &c.)		8 0	
Annual rent at, say, 7s. 6d. per week (rates being paid by tenant)		19 10	£28
Annual loss per family housed		8 10	

If this loss is more than the local authority can bear, the Government can give relief to the extent of annual taxes on the 500 houses for ten years. Alternatively they may withhold sanction until the local authority can raise the £100,000 locally at an annual debt charge of 4 per cent., thus reducing the annual loss to £4 10s., which may be further reduced by a temporary grant of tax revenue to the local authority. The local authority may find an increase of rent feasible, or they may in time find a contractor who will tender for the construction on terms which will bring the average cost per house down to £360, and so reduce the loss by one-tenth of the original estimated debt charges.

Since this note was prepared, the Government have announced that their subsidies to approved schemes will take the shape of an annual grant of £6 per house for twenty years. This will make the calculation of average annual loss per dwelling throughout the loan period more difficult; but the suggestions made above still hold good, *mutatis mutandis*. In any case, the principle governing the decision as to whether the scheme can be approved should be that the loss to the public purse must be known beforehand, and must be within a certain maximum approved by the two parties concerned, viz., the Government on behalf of the taxpayers, and the local authority on behalf of the ratepayer. If the loss cannot at first be brought within this maximum, then the scheme must be held over till it can. The neglect of this principle seems to me to have been the underlying cause of the heavy loss involved in the schemes of 1919-21; its adoption should checkmate profiteers and encourage and foster local public spirit and enterprise.

Blue Funnel Line.

It is reported that Messrs. Alfred Holt & Co., of the Blue Funnel Line, with their associated companies, the China Mutual Steam Navigation Co., Ltd., and the Ocean Steamship Co., Ltd., are about to provide a building at Liverpool in keeping with their world-wide shipping services.

THE RENT BILL:

SECOND READING.

THE attitude of the opposition to the Rent Bill is somewhat instructive. The mover of the Labour amendment only emphasised the necessity of prolonging Rent Restriction, deplored the fact that any houses should be removed from control, regretted that no reduction in rent was provided for, and asserted that the Bill gave the landlord further power to coerce the tenant. It would have been interesting had he specified the clauses which would have that effect.

A Member speaking for Liberals, according to the report, did recognise that control should not be continued indefinitely, but suggested a further continuance of the Act for a period of four years from the present date apparently without any modification. Several Members, as we had anticipated, objected to Part II of the Bill. The Minister of Health recognised that we were moving in a vicuous circle, as Restriction had scared investors from house property, and yet shortage of housing accommodation was the *raison d'etre* of Restriction, but we notice that throughout the debate it seemed accepted that the provision of houses must precede decontrol, an effort apparently to square the circle.

The whole debate, in our opinion, again illustrated how ill-advised has been the policy of Rent Restriction from its very inception. It is, we believe, the only war measure which took something from one particular class to benefit another class. Other measures affected the sanctity of property, but made the subject make sacrifices for the State, which is a very different thing. The relaxation of those measures brought relief to all subjects alike and was easily effected, but the relaxation of Rent Restriction involves taking a privileged position from one class and restoring freedom of contract to a class from which it was taken away, and hence all this opposition to a return to normal conditions.

There never was the slightest justification for bringing houses of the higher value into the Rent Act at all, and we think the Commission recommended a wise course when it advised decontrol by stages, as this would have brought about a clean cut step by step. The Parliamentary Under Secretary of Health for Scotland made a good point when he said it had always been asserted that decontrol of foodstuffs would bring about a rise in prices, but no such effect had followed. That is an illustration we gave in these pages some months ago, and it bears out what we have said above. The decontrol of foodstuffs affected all classes alike, and the whole community benefited, but it would have been otherwise if food had been controlled at the expense of one class of producer for the benefit of another class, and the same dispute would have arisen between the classes affected as is now being experienced in connection with Rent Restriction.

It is, however, no good shutting the eyes to the position as it stands. Houses are urgently required, but they will never be provided so long as the market is fettered by Restriction, and the landlords are apt to be hailed before the Courts on every pretext. A clean cut is the only way to attain the provision of houses, just as it was to obtain the provision of food. Every restriction in the future will hinder building, and uncertainty as to the continuance and duration of restriction is preventing a free market and the production of houses.

Parliament is trying to attain the impossible and to hunt with the hounds whilst running with the hare, and, as we said in our recent article, it is coming to this—either freedom must be restored to the market or the State must take over the housing question. That, in our opinion, would be an impossible and most disastrous course, and, therefore, we can only trust that wiser counsels will prevail and riot in Restriction will be put an end to definitely at a fixed date.

THE WEEK IN PARLIAMENT.

Westminster, *Wednesday.*

Rent Restrictions.

Good progress is being made by Standing Committee D of the House of Commons, which is considering the Rent and Mortgage Interest Restrictions Bill. Paragraph (*b*) of Clause 3 has been further amended so as to enable a landlord to obtain possession of a dwelling-house for a person in his whole-time employment, or in that of some tenant from him, "or with whom, conditional on housing accommodation being provided, a contract for such employment has been entered into." The provision in the paragraph as to alternative accommodation has been to secure that it is "reasonably suitable to the needs of the tenant and his family as regards extent, character, and proximity to place of work, and is reasonably suitable to his means." Clause 7 (Amount of rates where rates are compounded) has been withdrawn, and Clause 8 (Amendment of Section 7 of the principal Act, which relates to restriction on the calling in of mortgages) has also been deleted. An amendment by the Labour Party to set up a rent tribunal in place of a county court to determine questions as to standard rent, &c., has been negatived by 23 votes to eight.

The Committee stage was concluded on Monday. Clause 14, which deals with regulations as to reference committees, was passed, with only minor alterations; and the following clause, dealing with rules as to procedure, was passed without amendment.

Housing Bill.

The Housing (No. 2) Bill has been read a second time in the House of Lords. Lord Burnham, in criticising the measure and pleading for its extension, said that the Bill, though well meant, would do very little to remedy the evil conditions prevailing to-day. As one who had for several years been Chairman of the Building Employment Committee of the Ministry of Labour in that part of England, he said that there was not a master builder in London who believed that this measure would lead to the erection of a single house by private enterprise. Until they got back the speculative builder, they could do very little to solve the housing problem. The remission of local taxation would not cause any private builder to put up a house. The only way in which they could induce the small builder to come back into business was by the grant of a lump sum.

Lord Dawson of Penn, in supporting the Bill, said nothing could be more productive of permanent good than the extension of town-planning and of garden suburbs. In these new communities, where land was available and costs were low, experiments in public health could be made, and the way could be shown for useful and healthy development in the future. He urged the Government to give as generous a trial as possible to the garden suburb schemes set forth in Part II of the Bill.

Lord Salisbury, replying for the Government, foreshadowed the introduction of a Bill next year to consolidate all the Housing Acts.

Scottish Housing.

Mr. Hardie asked the Under-Secretary to the Scottish Board of Health, whether, seeing that the actual shortage of houses in Scotland was at least 100,000 and that the number of men employed on housing schemes decreased from 12,871 in April, 1922, to 7,077 in December, 1922, what action it was proposed to take to increase the number of houses under construction and to provide employment for unemployed workers in the building trade?

Captain Elliot said the figures given in the first part of the question were believed to be correct. As regarded the second part there remained to be constructed 3,256 houses under schemes approved in terms of the Housing, Town-Planning, &c. (Scotland) Act, 1919. In addition arrangements were being made for the provision by local authorities, with the aid of State grants, of houses for the accommodation of persons dispossessed by slum clearance schemes. Further provision for assisting the erection of houses was made in the Housing (No. 2) Bill. The Board were hopeful that under these schemes additional employment would be provided and a substantial number of new houses would be erected.

Houses Approved.

Lord E. Percy informed Captain W. Benn that the number of houses approved which would rank for assistance under the new Bill was 13,401.

Building Materials.

In reply to Mr. T. Thomson, who asked whether, in view of the continued advance in prices in building materials, which threatened to absorb the whole of the subsidy for houses payable under the Housing Bill, facilities would be given for the passage into law this session of the Bill to deal with trusts, Viscount Wolmer, Parliamentary Secretary to the Board of Trade, said he must ask the hon. member to await the Report of the Departmental Committee on prices of building materials.

Captain W. Benn: When will the report be published?

Viscount Wolmer: I understand an interim report will be published almost immediately.

Mr. T. Thomson asked the Minister of Health whether he was aware that the action of the Unemployment Grants Committee in refusing to make grants to local authorities who purchased building or other materials from abroad was assisting trusts and combines to force up prices of materials against the public; and would he therefore withdraw circular No. 400, of May 15 last?

Lord E. Percy said the Unemployment Grants Committee did not insist on the purchase of home materials as a condition of grant where such action would be likely to have the effect suggested. The answer to the last part of the question was in the negative.

Repayment of Assessment.

Sir A. Holbrook asked whether, in the case of owner-occupiers whose houses had been reassessed since 1919-20 without any individual valuation, contrary to the Halifax judgment, and which had subsequently been reduced on objection, it was proposed to make any provision that any sums demanded and paid since 1919-20 in excess of the sum payable as fixed on objection should be refunded?

Mr. N. Chamberlain said that where an assessment to local rates had been reduced in consequence of an objection to the valuation list, the ratepayer was under the existing law entitled to repayment of the excess amount paid by him in respect of the rate current at the date of the objection and any subsequent rate.

Entertainment Tax.

During the report stage of the Finance Bill, Sir W. Joynson-Hicks, Financial Secretary to the Treasury, moved a new clause, which was agreed to, exempting from Entertainments Duty, among other things, an entertainment provided by a society, not established or conducted for profit, for "the purpose of promoting graphic art, sculpture, or arts craftsmanship." A second new clause was proposed by the Government, exempting from the scope of the duty payments for amusements to the British Empire Exhibition, but the opposition to this was so strong that the clause was withdrawn.

The New Assessments.

Sir W. Joynson-Hicks also moved a new clause, which was agreed to, embodying the concessions which he announced in the Committee stage, and which were given in *The Builder* a fortnight ago, with regard to inhabited house duty.

RENT BILL IN COMMITTEE.

Most of the amendments moved by the Labour party to the Rent Bill seem framed in an endeavour to leave the law as it stands, and to hinder any alteration. We have already alluded to the amendment introduced into subclause 1 of clause 2, but subclause (2), which relates to the granting of leases, has been also amended. To take the house out of the Act the lease or agreement must end at some time after June 24, 1926, not June 24, 1925, as provided in the Bill, and the lease or agreement must be for a period of at least two years.

In clause 3 already an amendment has been made which serves to illustrate our observation above, that any amendment of the law is resisted. The clause relates to the grounds on which possession can be claimed, and as it stood in the Bill it was provided as one of the grounds that the house was required by the landlord for occupation as a residence for himself "or for his children," the latter words not occurring in the Act of 1920. This has now been amended by inserting the words "or for any sons or daughters of his over the age of 18 years." This seems entirely to alter the effect of the clause. For instance, a man engaged in business has a delicate family, and he has purchased a house at the sea that they may reside there. He does not require the house for his own occupation, but for his children, and the clause permitted him to show the reason he required possession. *i.e.*, for young children. As it stands the clause assumes he requires the house for the occupation of some adult child, which is not at all the same thing. The clause also provides that the house might be required for some person engaged in the whole time employment of the landlord "or to be engaged." These words were introduced because of the decision in Spencer *v.* Fox (*The Builder*, April 19, 1922), that for the paragraph to apply the man must actually have commenced to work for the employer. The result of this decision was that in country districts where housing accommodation is scarce the man engaged could not take up his post because there was nowhere for him to live, whereas the man who had given up the post occupied the landlord's house, and he in his turn might be far from his new work.

It might be imagined that Labour Members would have seen such an arrangement stood in the way of employment, and that the amendment in the Bill would be gladly accepted, but many members spoke against this alteration in the law, and, although the effort to alter the clause was defeated by a considerable majority, it illustrates the tenacity of some persons to cling to the Rent Restriction Act whatever may be its effect.

Staff Outing.

The staff of Messrs. Keeble (1914), Ltd., resumed their annual outings and dinner on Saturday for the first time since 1913. Special saloons conveyed the party of 63 to Hastings, and after a very enthusiastic sports meeting a dinner followed at the Adelphi Hotel, at which Mr. Herbert Keeble took the chair, supported by Mr. Arthur Keeble as vice-chairman and Mr. A. H. Stevens, who acted as toast-master.

After the loyal toasts proposed by the chairman, Mr. E. H. Littlewood proposed the toast of "The Firm," and Mr. A. Brasier "The Chairman and Vice-Chairman"; while Mr. Arthur Keeble proposed "The Visitors." All these toasts were drunk with enthusiasm, and after the distribution of prizes to the winners of the sports events and a very enjoyable day, the party returned by special train to Charing Cross.

THE BUILDING TRADE

ESTIMATING FOR SMALL BUILDERS—II.

By J. H. BARNS, F.I.O.B.

— yards cube cement concrete to trenches, mixed in the proportions of six parts Thames ballast to one part of Portland cement.

Example:—

6 yds. Thames ballast delivered, at 12s. 6d. yard	£3	15	0
1.1–20 tons Portland cement, at 60s. ton	3	3	0
Use of 12 sacks, at 3d. each		3	0
Labour mixing and depositing concrete, 6 yds. at 4s. 6d. yd.	1	7	0
	£8	8	0
Add for diminution in bulk consequent upon mixing and consolidating, 15 per cent.	1	5	2
	£9	13	2
Add on-costs and profit, say 15 per cent.	1	9	0
Total for 6 yards	£11	2	2
Price per cu. yd.	1	17	0

The above method is simple, free from liability to arithmetical error, and sufficiently nearly accurate that it may be used for all practical purposes.

Portland cement concrete to trenches in underpinning would be worth at least 50 per cent. extra for labour, as it is usually in small quantities.

To find the cost of concrete mixed in any other proportions than those mentioned above, it is only necessary to alter the various quantities to suit. In this example 6 yds. has first been taken to arrive at the price of 1 yd., which is simpler than to attempt to arrive directly at the price of 1 yd. of concrete, as if this is done it involves the use of several fractions. If 6 yds. of ballast are required to 1 yd. of cement, the quantity of cement would be 1.1–20 tons, as there are 21 bushels per yard, and each bushel of British Standard Portland cement weighs 112 lbs., equalling 1.1–20 tons.

During the mixing the cement goes into interstices in the ballast without increasing the bulk, and during and consequent upon ramming and consolidating the bulk will be further diminished, and for this 15 per cent. has been allowed, which should be sufficient. It is almost impossible to state the exact quantity of diminution in bulk consequent upon mixing, &c., even if a definite example of aggregate were seen, but usually the estimates are prepared long before the ballast is even dredged from the river bed, so that it is impossible to state exactly the percentage of voids in the ballast quoted for. The cost of labour will depend upon how near the materials can be delivered to the actual point at which concrete is to be deposited. Machine mixing is a doubtful economy except in special cases.

— yds. super 6 in. Portland cement concrete (mixed as before), spread and levelled over surface, at 6s. 3½d. yd.

This rate is arrived at by taking one-sixth of the price per cu. yd. for Portland cement concrete illustrated above and adding 10 per cent. for extra labour. Concrete floors filled in on centering around steel joists (centering and steelwork measured elsewhere) are worth about 10 per cent. per yd. super for labour over and above the price of surface concrete. Should any hoisting be necessary to the various floors this must be added.

Brickwork.

— rods super reduced Fletton brickwork in cement mortar mixed in the proportion of three sand to one of cement.

Example:—

4,356 Fletton delivered, say, at 60s. 1,000	£13	1	4
3 yds. sharp sand, at 14s. yard ..	2	2	0
1.1–20 tons Portland cement, at 60s. ton	3	3	0
Use of 12 sacks, at 3d. each		3	0
Labour (Bricklayer and Labourer), say	8	10	0
Scaffold, say	1	0	0
	£27	19	4
Add for on-costs and profit, say, 15 per cent.	4	3	11
	£32	3	3

A standard rod of brickwork is presumed at 16 ft. 6 in. long by 16 ft. 6 in. high and 1½ bricks thick, equalling 272 ft. 3 in. super. In such a wall there will be 66 bricks per course, and 66 courses high, totalling 4,356 bricks of London size. For simplicity of working 4½ thousand bricks may be taken. It is customary not to make any allowance for wasted bricks. The quantity of mortar required varies with the thickness of the wall and the size of the joint. Speaking generally, 3 yds. of sand would be sufficient.

The labour is calculated—bricklayer and labourer laying 600 bricks per day. The number of bricks which can fairly be laid in a day varies from 500 to 1,200, according to the class of work and quality of materials. Supervision and organisation count for a great deal. A bricklayer with few bricks handy and a frequently empty spot board will hardly break records. The brickwork at the lower stories of buildings will cost less than at the top, as the walls are usually thicker at the bottom, and brickwork at the top of a building requires considerable labour for hoisting materials. Long, straight walls cost less for labour than walls with piers or openings, as the plumbing to angles takes comparatively a long time and is not specially measured. The scaffold is a very difficult item to analyse, as the amount paid to scaffolders on a job is not necessarily an indication of the cost of scaffolding, as these men do all sorts of work on the job which is not strictly scaffolding. The lower portion of the wall will require very little scaffolding, the upper part needing most of all. Each item in the building should have a percentage added for scaffolding as all the trades share its advantages. Some firms adopt the method of adding 1½ per cent. upon the estimated cost of the building for the general scaffolding. Brickwork in cement costs for labour about 5 per cent. more than brickwork in lime mortar, as the lime mortar is fatter and works more freely, and cement mortar is short and is not easily retained on the trowel. In the early days of using cement mortar for brickwork some firms paid their bricklayers ½d. per hour extra, as it was deemed to involve extra skill. Brickwork in underpinning is worth from 25 per cent. to 50 per cent. extra for labour. Stocks would take a little longer than Flettons to lay, but frequently no difference is made in estimates on account of this slight difference in labour, but any difference in cost of materials should be added.

— rods super Reduced Blue Staffordshire Brickwork in cement mortar, mixed as before.

Example:—

4,356 Blue Staffordshire Bricks at 190s. 1,000	£41	7	8
3 yds. Sand at 14s. yard	2	2	0
1.1–20 tons Portland Cement at 60s. ton	3	3	0
Use of 12 sacks at 3d. each		3	0
Labour—Bricklayer and labourer, say	14	15	0
Scaffolding, at say	1	0	0
	£62	10	8
Add oncosts 5 per cent., and profit 10 per cent.—15 per cent. ..	9	7	7
	£71	18	3

This is calculated on the basis of a man laying 350 Blue Staffordshire bricks per day. Blue bricks cost more to lay, as they are heavier, less absorbent, and "swim" in the mortar.

Facings and Pointing.—The presumption is that the brickwork has been measured in common bricks and that a superior brick will be used as facing. The cost of facing would depend upon the bond to which the brickwork is laid. English bond would take about 8 bricks per ft. super; Flemish Bond about 7 bricks per ft. super; Norfolk Bond about 6 bricks per ft. super.

Example:—

— ft. super. Extra to facing with stocks and pointing in cement—

		s.	d.
Stock Bricks ..	per 1,000	80	0
Fletton „ ..	„ „	60	0
Difference		20	0

= 2d. per ft. super.

This can roughly be arrived at by stating that £1 per 1,000 is ¼d. per brick—

English Bond—8 at ¼d.—2d. per ft.
Flemish Bond—7 at ¼d.—1¾d. „ „
Norfolk Bond—6 at ¼d., 1½d. „ „

Other prices can be worked on similar lines, which are sufficiently nearly accurate for ordinary purposes. To this must be added the cost of pointing, probably 1½d. per ft. super. Another method of arriving at the price of eight bricks is by taking the 20s. and dividing by 10, and calling the result pence. This will be suitable for English bond, but not for Flemish or Norfolk bond.

Pointing.

Example:—

— ft. super. Extra over Fletton brickwork for facing with blue pressed Staffordshire facing bricks and pointing in cement—

		s.	d.
Blue pressed Staffordshire bricks	per 1,000	200	0
Deduct cost of Flettons	„ „	60	0
Difference	„ „	140	0

= English bond, per ft. super, say 1s. 2d.

Number of Flettons laid per day		600	
„ „ Blues	„ „	350	
Difference		250	

	£	s.	d.
Additional cost of labour per rod	6	5	0
= additional cost per ft. super reduced to 1½ brick thick, say			5½
= cost per ft. super ¾ brick average for facing, say			2¾

Summary:—

Additional cost, bricks per ft. super	1	2	
Additional labour „ „		2¾	
Pointing, say .. .. „ „		1½	
„ „	1	6¼	

Add profit, &c.

— ft. super. Extra only to facings with best white glazed bricks and pointing in cement (a bricklayer will lay about 300 white glazed bricks per day)—

		s.	d.
White glazed bricks, average cost	per 1,000, say	460	0
Deduct cost of Flettons	„ „	60	0
Difference .. „ „		400	0
Cost of eight bricks, say ..		3	4
Extra labour as before, say ..			3
Pointing, say			1½
		3	8½

Add profit, &c.

— ft. run. Extra to Flettons bullnosed angle—

Example:— s. d.

Cost Fletton bullnosed bricks, delvd. per 1,000 75 0
Deduct Flettons (ordinary) „ „ 60 0

Difference .. „ „ 15 0
Cost of eight bricks 1½

Cost of four bricks .. .. ¾
Extra labour .. .. .. ¾

Total 1½

If worked out on these or similar lines, other items in the bill could be dealt with.

NORTHERN POLYTECHNIC INSTITUTE.

Apprentices in the Building Trades.

The following are minutes of a meeting of the Advisory Committee dealing with the Architecture, Surveying and Building Dept. of the Northern Polytechnic Institute, Holloway:—

Mr. T. P. Bennett reported that Mr. E. Kearney had offered a prize of five guineas to be competed for by the students of the Masonry Class. The Committee instructed the Secretary to record its sincere appreciation of Mr. Kearney's generosity.

The School curriculum was discussed. Mr. Bennett explained the work of the Junior Day School, and the Committee considered the hours allotted to each subject. Mr. Trollope suggested that chemistry seemed to be given some prominence, and Mr. Bennett stated it was necessary for the boys to understand clearly the composition of the materials with which they worked, and this could only be obtained in the chemistry laboratory. Mr. Bennett placed before the Committee a list of the subjects treated by the chemistry classes.

With regard to the time-table of the Senior School, Mr. Roberts inquired as to the value of the esquisse programme. Mr. Bennett explained that the students were allotted one day per week in which to produce a given subject, and it was found that this method developed (*a*) draughtsmanship, (*b*) ability to concentrate on the work in hand, (*c*) power to see and eliminate all unnecessary detail. Mr. Bennett, in reading the esquisse programme for the term, pointed out that one design per week enabled the students to deal with a very wide range of subjects during the year.—Mr. Campbell Reid suggested that students of architecture should spend a given number of hours per week in the workshops, with the object of keeping in touch with the practical side of the work. The Committee agreed as to the value of this suggestion, and Mr. Bennett promised to give the matter his serious consideration.

Mr. Bennett stated that permission had been obtained for the employment of a whole-time lecturer in quantity surveying, but that difficulty had been experienced in obtaining a competent instructor. Mr. Trollope thought the remuneration offered (about £300 per annum) was not sufficient. Mr. Desch considered it would be better to engage a part-time lecturer, particularly as instruction of any value could only be imparted by a surveyor in touch with modern conditions: theory was of little value in quantity surveying. Dr. Clay said that a whole-time instructor need not necessarily give up his own practice, as only a limited number of hours per week was devoted to this subject.

Mr. Trollope said that if the Committee would leave the matter open he would endeavour to obtain the services of a capable instructor.

Mr. Bennett asked those members of the Committee actively engaged in the building industry to meet him and consider the whole programme of the Building School. Mr. Trollope, Mr. Desch, and Mr. Edward Deacon agreed to meet Mr. Bennett, and it was also agreed to ask Mr. Roberts to be present.

Mr. Bennett stated that the number of apprentices in the building trades in London was about 150, whereas the operatives in the painting trade alone numbered approximately 60,000. The result was that the normal wastage in the building industry could not be made up by qualified workmen, and the great danger was that when a boom came an undesirable element of unskilled labour would get into the industry. Mr. Bennett was of opinion that the solution to the problem of recruiting suitable labour in the building trades could be found in the technical schools; he considered that a boy who left an elementary school and entered a technical school, where he was trained in all branches by experts, proved to be an infinitely more capable workman than a boy who entered a workshop and picked up his knowledge in a haphazard manner.

Mr. Bennett expressed the hope that members of the Committee would visit the school and compare the work produced by students in the trade school with that of the apprentices; and that some effort would be made to impress upon the L.M.B.A. and the non-federated firms the superiority of the boy who is trained in a first-class technical school.

Mr. Woodward asked (1) whether the trade unions were against apprenticeship; and (2) whether the reluctance of employers to take apprentices was due to lack of money. In reply Mr. Bennett stated that (1) the trade unions appeared to be actively interested in the growth of the apprenticeship scheme, and (2) in his opinion the difficulty was that employers, in these days of fluctuating businesses, did not feel able to bind themselves to employ boys and to pay wages over a period varying from five to seven years ahead; also, with the shorter hours of labour, employers could not afford the waste of material and the time of skilled workmen which were involved in teaching apprentices.

The matter was referred to the meeting between Mr. Bennett and Messrs. Trollope, Desch, Deacon, and Roberts already mentioned.

A question was asked whether students, on leaving the school, were prepared to accept appointments on probation; Mr. Bennett replied that all students were prepared to accept positions on probation.

Mr. Bennett placed before the Committee the names of several students who were anxious to secure positions during the summer vacation.

The next meeting of the Committee was fixed for October 18, at 6 p.m.

"THE BUILDER" COST OF BUILDING COMPETITION—No. 2.

The last date for sending in applications for the Conditions of Competition No. 2, in which builders are submitting tenders for the erection of the two houses, designs for which were accepted by Professor S. D. Adshead in the first part of the Competition, was June 23.

A selection of nearly forty plans, elevations, and details, from about 300 designs submitted in Competition No. 1 (open to architects only), including the designs which won the £75 prize for class "A" (houses with three bedrooms and parlour), and class "B" (houses with four bedrooms and two sitting-rooms), have now been published in book form (London: *The Builder*, 4, Catherine-street, W.C.2, price 2s. 6d. net.)

Wages in Liverpool and District.

The revised wages, by the hour, in the Liverpool, Birkenhead and Wirral (Cheshire) districts, as from July 16 will be:—Craftsmen, including plumbers, 1s. 8d.; navvies and general labourers, 1s. 3d.; tradesmen's labourers, 1s. 3½d. From Nov. 1 the rates will be: 1s. 7½d., 1s. 2½d., and 1s. 3d. respectively.

COMPARISON OF PRICES OF BUILDING MATERIALS BETWEEN AUGUST 4, 1914, AND JUNE 30, 1923.

Material.	Aug. 4, 1914. £ s. d.	Nov. 11, 1918. £ s. d.	May 31, 1923. £ s. d.	June 30, 1923. £ s. d.	Rise or Fall during Month. (Per cent.)

NEW WAREHOUSE IN STAMFORD-STREET, S.E.

THE building in Stamford-street, S.E. 1, has just been completed for Messrs. Boots' Pure Drug Co., Ltd. It is T-shaped on plan, formed by two blocks roughly 186 ft. by 75 ft. and 154 ft. by 60 ft. respectively, the former having a frontage of 186 ft. to Cornwall-road. The building covers an area of approximately 23,200 sq. ft., not counting the loading docks, which are roofed over at first floor level, and which increase the area covered to approximately 27,300 sq. ft. The structure is seven stories high, including the basement; the flat roof is 70 ft. above street level. Portions of the roof are carried still higher for the lift, machine rooms and the water tower, and a portion of the basement is sunk to a lower level to form a heating chamber and to accommodate steam boilers. The total floor area for all floors is approximately 168,000 sq. ft., or approaching four acres.

Receiving and despatch loading docks are arranged behind the front block, and are approached by covered cartways at each extremity of the front of Cornwall-road. The roofs of these loading docks are glazed, and a travelling crane is provided for handling heavy packages.

The building is served by four staircases and four goods elevators, and provision is made in the floor construction for installing additional elevators when necessary.

Lavatory accommodation is provided on all floors, and for protection against fire a complete sprinkler system is installed throughout the building, together with the usual fireproof and fire-resisting doors, in accordance with the L.C.C. regulations.

The building consists of complete steel frame, the stanchions having, in some cases, grillage foundations, and in others large cast-iron cone bases and reinforced concrete footings. The walls are concrete, poured *in situ*, and on the street elevation are introduced cornices and pilasters.

The floor panels are poured concrete slabs, reinforced with heavy bars, passing through the webs of the supporting steel beams. The floors are finished with a granolithic surface.

All steelwork is encased with 2 in. of concrete, and the soffits of beams and the casings to the stanchions are formed with pre-cast slabs, the former being wired to the bottom flange of the beams and the latter bonded at the angles. The stanchion casings are filled in to a certain height behind the pre-cast slabs with poured concrete.

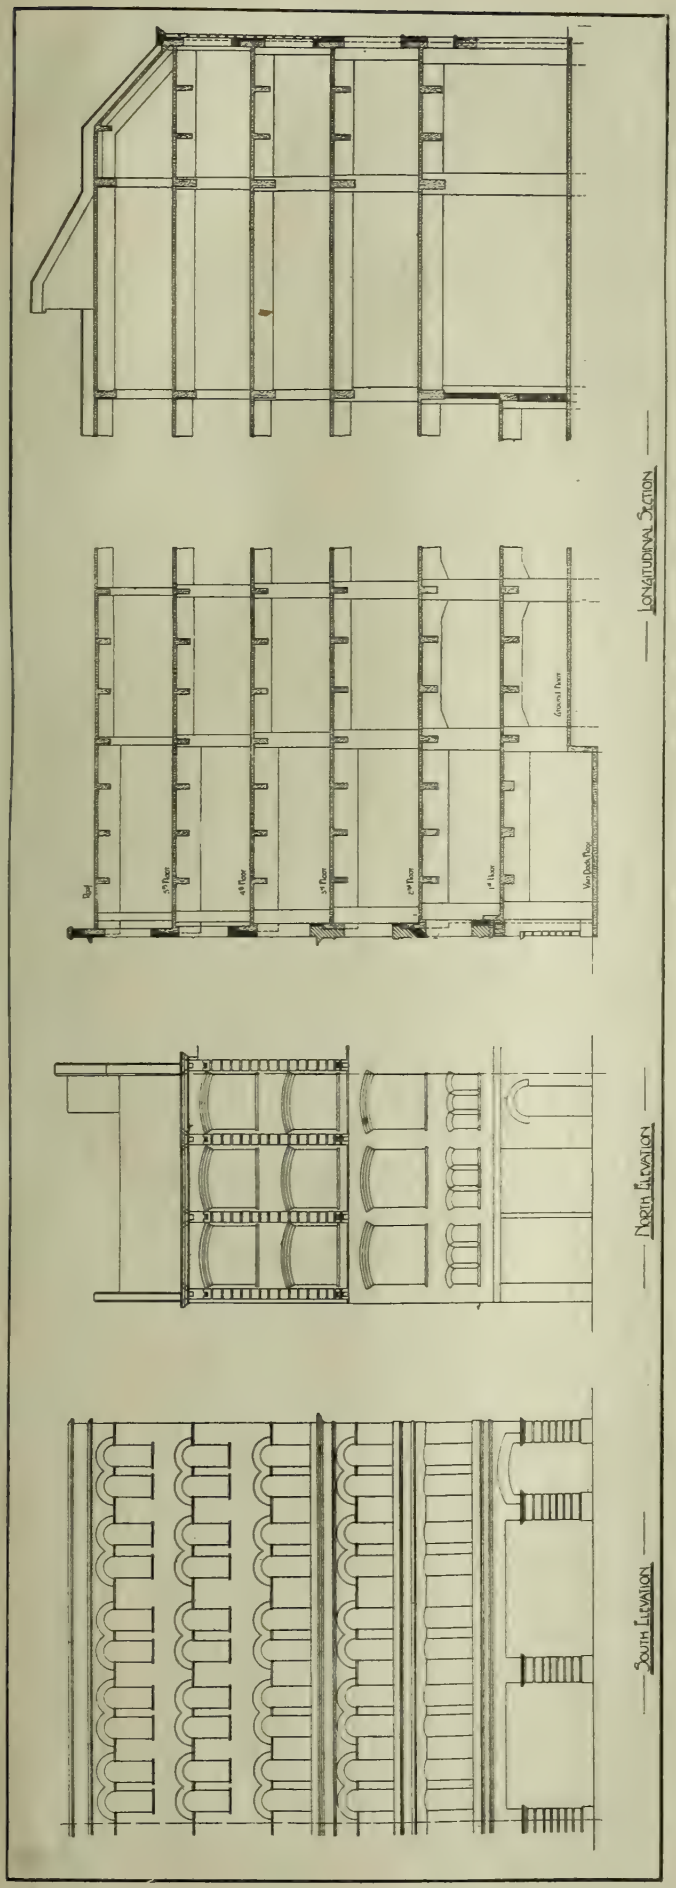
Steel window sashes are used throughout, and the bulk of the joinery is in teak. The staircase steps generally are pre-cast, and are supported by steel stringers, part of the steel frame.

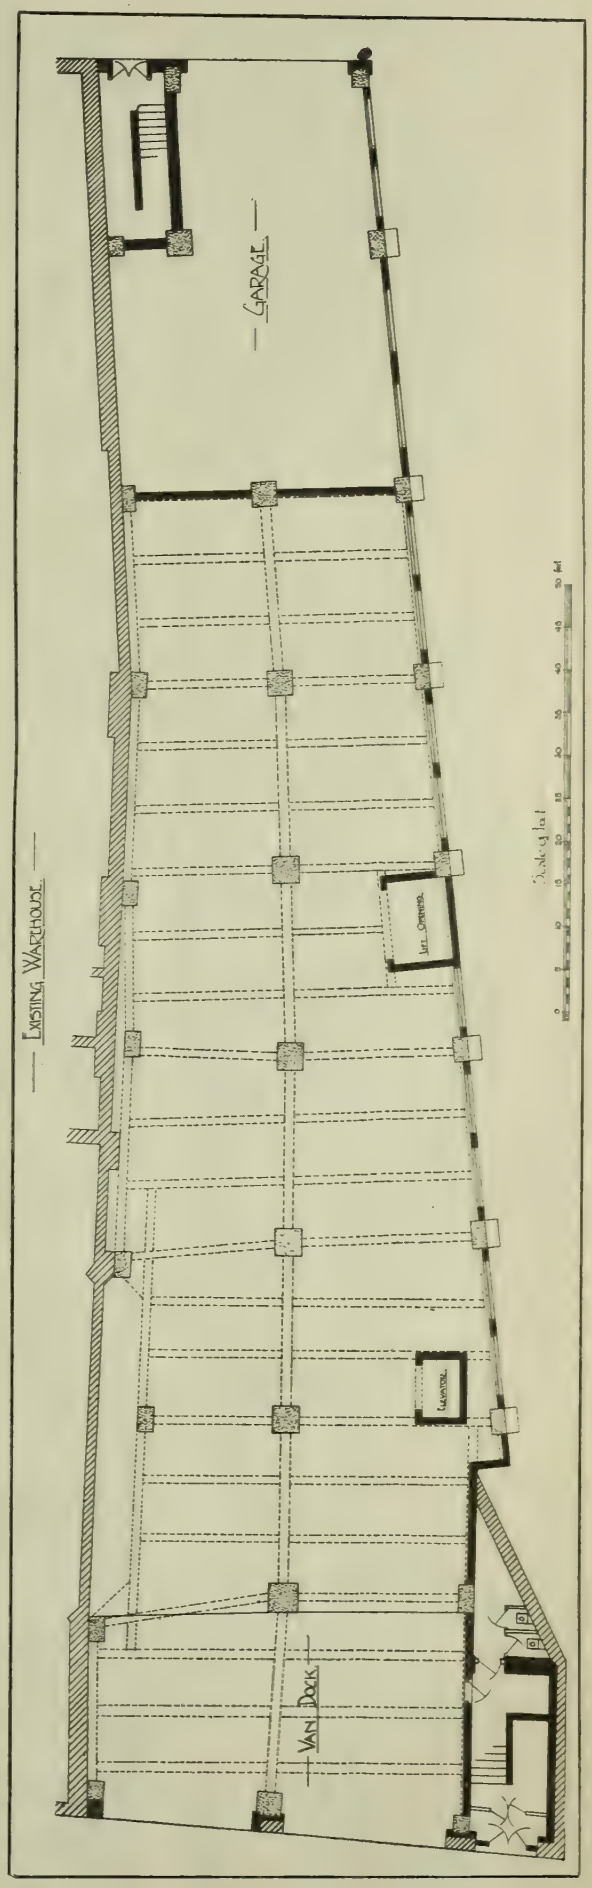
Regarding the concreting operations, which form the large bulk of the work on a job of this description, speed and economy of placing the concrete were secured by centralising the concrete mixing plant, and by placing it in a position convenient for the reception of the raw materials and the depositing of the concrete in any part of the building. The plant generally consisted of a ½-yd. concrete mixer, driven by electric power, the mixer discharging into the bucket of a tower elevator, which lifted the concrete to a height from whence it gravitated through chutes to any part of the building.

As the steel frame was practically completed before the concreting started it was impracticable to pour the concrete direct from the chutes to its final position. Storage hoppers were, therefore, used and placed in convenient positions from which hand concrete-buggies were filled and the concrete deposited in the usual way. The concreting of the floors proceeded in advance of the walls, and for placing the comparatively small quantities of concrete used in the walling special chutes were designed which hung vertically outside the building and were charged from the floor above. These chutes are somewhat novel, as to meet the continual shortening by the progress of the work, one side is composed of a number of interlocking plates, which are removed, one by one, as the work progresses. For the walls, steel centering or wood centering was used. The floor centering, however, was entirely wood, and was based on a carefully thought-out scheme at the commencement of the job.

The entire external and internal foundation walls, which are about 18 in. thick, were erected with "Metaforms." The outfit consisted of about 200 assorted sizes of these steel forms and corner units, and no timber braces or struts were used. "Metaform" interlocking steel forms were used to mould the solid concrete external and internal walls between steelwork on the superstructure. A two-course outfit was used, comprising about 1,100 assorted sizes of straight wall "Metaforms" and 570 corner connections. These forms were set up around the entire building, including the difficult frontage, which was composed of pilasters and window openings with a narrow strip of plain wall on each side of each window. The forms were wired together on to 14-in. wall distance pieces with 12-gauge wire, and no braces or struts of any kind were used or required, and the forms kept a true plumb line to the top of the building. A noteworthy feature in connection with this contract was the entire absence of external scaffolding of any description—the steel forms being set up in position and all other necessary work to the exterior of the building being done by men operating from travelling cradles which were suspended by ropes from a rail projecting from the roof steelwork. The face of the concrete came out so smooth direct off the steel shutters that no rendering was necessary, a cement wash being applied to give a level tone.

The architects are Messrs. Bromley and Watkins, FF.R.I.B.A., of Prudential Buildings, Nottingham. The general contractors for the building and finishings were Messrs. F. D. Huntington, Ltd., of 11, Hanover-square, W.1. Messrs. Moreland, Hayne & Co., Ltd., were the contractors for the steel frame. The contractors for the foundations were Messrs. Higgs & Hill, Ltd. The "Metaform" steel forms were supplied by Messrs. A. A. Byrd & Co., of 11, Queen Victoria-street, E.C.4.





Warehouse in Stamford-street. MESSRS. BROMLEY & WATKINS FF.R.I.B.A, Architects.

New Warehouse in Stamford-street, during Construction. Messrs. Bromley & Watkins, FF.R.I.B.A., Architects. (*See p.* 27.)

New Warehouse at Bethnal Green. (See p. 30)

LARGE WAREHOUSE EXTENSION IN BETHNAL GREEN.

A large extension to the premises of Messrs. Pearks' Dairies, Ltd., at No. 11, Bethnal Green-road, E.1, has recently been completed. The building is a five-story structure, erected in reinforced concrete with wall-panels of brickwork. The main frontage of 56 ft. is in Bethnal Green-road; the depth of the building is 210 ft., backing on to Church-street, with a width of 32 ft. The total area of the site is 8,600 sq. ft.

The building is divided laterally into two bays, and it is intended to extend the premises still further at some future date. To this end the bases to the columns along the west wall have been made sufficiently strong to carry full panel loads; and from the ground level upwards only half-columns have been erected with beams sufficiently strong to carry half-panel loads. Thus it will be possible to erect the future extension without cutting into the present work beyond the half-column connections at ground level, all bracketing work being dispensed with.

The total height of the building from the level of the van dock floor to the roof is 70 ft. The foundations have been carried down to firm ballast, which was found at varying depths up to 16 ft. below ground level.

The temporary wall on the west side is glazed with steel-frame windows but the front elevation is fitted with wood frames to correspond with the elevation of the original warehouse adjacent, the lines of which are followed throughout the new work. In Bethnal Green-road an existing building was pulled down with the exception of the front wall, which has been incorporated in the new building.

The front bay of the building on the ground floor is to be utilised as a van dock, and a garage has been constructed at the back (in Church-street) occupying two bays up to the second-floor level.

Two staircases are constructed in reinforced concrete, cast *in situ*, the stairs being carried on stringers, spanning between beams in each landing. All the floors and stairs are to be surfaced in granolithic; elsewhere the concrete and brickwork is lime-whited only, save in those portions set aside for the offices and board-room, which will be panelled in oak. One elevator and a passenger lift are to be built in to serve all floors and the roof.

The first two floors are designed to carry a superimposed load of 300 lbs. per sq. ft., the other floor to carry 225 lbs. per sq. ft., and the roof 100 lbs. per sq. ft. All the reinforcement is carried out in round steel bars, of which altogether 250 tons have been used.

The architect is Mr. J. H. Storrar, and the complete building is being constructed by Messrs. D. G. Somerville & Co., Ltd., engineers and contractors, 120-122, Victoria-street, Westminster, S.W., who are also responsible for the design of the ferro-concrete work. A section of the building is given on p. 29.

French Requisition of Timber in Germany.

The Board of Trade announce an intimation from the French Government that timber requisitioned at Karlsruhe and Mannheim will be held for fifteen days before being forwarded to the devastated regions in case it should not be German property, and to enable the owner in such event to prove his ownership. All claims should be made to the French "Services de Restitution," at Wiesbaden (Secteur Postal 180). In exceptional cases the examining Commission set up to consider claims is empowered to award compensation to owners of requisitioned timber.

On Saturday last the employees of Mr. George Browning, contractor, of Canterbury, held their annual outing. The party, numbering about 150, left Canterbury on the 7.16 train for London in special coaches. Later they were taken for a tour of London on omnibuses.

RATES OF WAGES IN THE BUILDING TRADE.

The following are the rates of wages in the building trade in England and Wales. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Brick-layers' Labourers.	Plas-terers Labourers.
Aberdare	1/7	1/7	1/7	1/7	1/7	1/7	1/7		1/2½
Accrington	1/7	1/7	1/7	1/7	1/7	1/7	1/7		1/2½

(For rates of wages in the Building Trade in Scotland, see page 31.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING AND PAINTING.

PROPOSED NEW BUILDINGS & OTHER WORKS.

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations :—T.C. for Town Council; U.D.C. for Urban District Council; R.D.C for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; L.C.C. for London County Council; B.C. for Borough Council; and P.C. for Parish Council.

ABERDARE.—A grant of £5,000 has been received by the Cwmaman (Aberdare) Institute Welfare Committee from the Miners' Welfare Fund. The Committee's scheme of work is the erection of a ladies' club and reading room as an extension to the present club; and a pit-boys' welfare club and gymnasium. The joint secretaries are Messrs. H. Humphreys and Gwilym Thomas.

ABERDEEN.—Messrs. Brown & Watt, architects, have prepared plans for a public hall for the Cults district.

ABERTILLERY.—The erection of a new infants' school at Six Bells has been sanctioned.

ACCRINGTON.—Messrs. Oldham Bros., builders, propose to erect six houses in Harcourt-road; and Mr. J. W. Dean, six bungalows in Mather-avenue.

AMMAN VALLEY.—The Schools Managers will, immediately plans are approved, put in hand the extension of Bettws School.——Negotiations are nearly completed for land acquirement from the Gellyceidrym Colliery Co. by the local Miners' Welfare Committee (Councillor David Davies, chairman), when the erection of a new workmen's hall will be put in hand by the committee.

ATTERCLIFFE.—The Park Circuit Wesleyans are preparing for the new hall at Attercliffe. More than £21,500 has been promised towards the total cost of about £30,000. Mr. W. J. Hale, F.R.I.B.A., has been appointed architect. The new hall will seat about 1,700 people, and provide accommodation for 1,000 scholars, and convenient arrangements for the social activities of the mission.

AYR.—The T.C. has agreed to build 26 two-apartment, 28 four-apartment and 12 three-apartment houses, at a cost of some £18,000.

HORNSEY.—Plans passed by T.C. : Twelve dwelling-houses, at Woodside-avenue, by Messrs. Smerdon Bros., Dartmouth Park-road ; two dwelling-houses, at Muswell-road, by Mr. Geo. Bronsdon, Muswell Hill-road ; four dwelling-houses, in Park-road, Crouch End, by Messrs. C. & F. Bryen ; two dwelling-houses, in Montenotte-road, by the Imperial Property Investment Co. ; two garages, in Farrer-road, Hornsey, and an addition at "Eagle Cottage," Fortis Green.

HORSFORTH.—Plans passed :—New picture house and two lock-up shops in Town-street, for Mr. E. A. Hobson ; pair of houses in Victoria-crescent, for Messrs. Read Bros. ; pair of houses in Victoria-gardens, for Mr. J. Furness ; house in Hall-lane, for Mr. Shore.

HULL.—Hull Tramways Committee report a profit on the past year's working of £43,661. It was decided that the manager and engineer should interview the Ministry of Transport in respect of an application to borrow £100,000 for track renewals.—— The City Architect has been instructed to prepare plans and obtain estimates for the reconstruction of the Central Fire Station ; the Ministry of Health have sanctioned the following loans : £9,829 for the widening and improvement of Cottingham-road ; £8,668 for widening and improvement of Beverly-road ; and £962 for acquiring necessary land connected with these improvements.

ILFORD.—Plans passed by U.D.C. :—P. Cornish, bungalow, Tomswood Hill ; F. G. Faunch, two houses, 6 and 8, Brandville-gardens ; W. J. Cearns, temporary church, west side of Burnside-road ; J. H. Storrar, alterations to 158, High-road ; G. Cushing, seven houses 13–25, Perryman's Farm-road ; F. G. Faunch, house, 30, Shawville-gardens ; Fuller's United Electric Works, Ltd., boiler-house, at works, Grove-road ; A. W. Perry, garage, Oaklands Park-avenue ; F. G. Faunch, two houses, 2–4, Brandville-gardens ; C. Sharpe, extension to No. 1, The Facade, Ilford Market, Ilford-lane ; W. G. Smith, bungalow, 31, Quebec-road ; C. T. Genever, four houses, Horns-road ; W. H. Knox, New-road, Meadway ; Meredith & Smith, two shops and dwellings, Becontree-avenue ; F. G. Faunch, house, 14, Brandville-gardens ; Ullyett & Co., garage, 36, Arundel-gardens ; W. J. Lewis, store and garage, 93, Coventry-road ; W. J. Cearns, market, Becontree-avenue, Becontree Estate ; T. J. Macey, garage, High-street, Barking-side ; W. H. Knox, four bungalows, 54–6, Breamore-road ; A. Spicer, store, 1, Broomhill Market, Green-lane ; W. H. Knox, 10 houses, 15–23 and 14–22, Egerton-gardens ; H. Dingle, garage, 129, Woodlands-road ; Fuller's United Electric Works, shed for soot works, &c., Grove-road ; F. G. Faunch, house, 16, Brandville-gardens ; F. G. Faunch, 12 houses, 26–48, Brandville-gardens.

LANCASTER.—Messrs. T. H. Lawson & Son, High-street, propose to erect a number of modern-style flats on the Moor Garden Estate.——Plans passed by T.C. :—Bungalow, Hall Park Estate, for Mr. J. C. Ray ; garage, 3, Hillside, for Mr. F. Burns Bell ; four houses, Franklin-street, for Mr. J. L. Tyson.—— The T.C. have accepted tenders of £438 each for the erection of a further 20 houses.

LEEDS.—The Leeds Improvements Committee have accepted an offer of Mr. G. W. Atkinson to erect 164 type "A" houses on the East End Park Estate, subject to the Corporation agreeing to pay a subsidy of £100 per house.

LITTLEBORO.—Messrs. George Spencer Moulton & Co., Ltd., Whitworth-street, Manchester, are proposing to erect eighteen houses near their works at Littleboro.

LLANELLY.—At the annual meeting of the Governors of the General Hospital, it was announced that £15,000 had been promised toward the cost of the proposed hospital extensions.

MANCHESTER.—Lewis's propose to practically double their present accommodation. Arrangements are to be made to acquire the whole of the block of property bounded by Marple-street, Fountain-street, Meal-street, and West Mosley-street, immediately at the rear of the present premises. When the scheme is complete the space will be equal to 14 acres. The employees will be increased from 1,400 to 2,400. Building operations will begin in about three months' time. Two or three years will be occupied in the work, which will cost not less than £1,000,000. The architects are Messrs. J. W. Beaumont & Sons, 24, Brazennose-street.——Messrs. C. J. Lomax & Son, civil engineers, of 37, Cross-street, are consulting engineers for the pumping scheme at Coppull for Chorley D.C., estimated to cost £3,250. Tenders have not yet been invited.

MERTHYR TYDFIL.—The T.C. has instructed its Architect to prepare plans for the erection of stores.—— An agreement has been reached by the T.C. with the owners of land at Russell-street, by which a scheme for lane widening, &c., will now be carried out.—— The Carnegie Trustees are considering a grant towards the erection by the T.C. of a new public library at Merthyr.——The Ministry of Health has notified the T.C. that it will favourably consider for grant a scheme to erect a ferro-concrete fire station in the town, and has called for detailed estimates, &c.——Sanction has been received to the acquisition by the T.C. of four cottages fronting the cemetery in connection with the scheme to be carried out for improving access thereto. ——Plans and estimates for a new river centre pier in support of Pontyrhin Bridge, which has suffered from traffic vibration, have been called for by the T.C. ; the western side of the bridge parapet is also to be lowered, and the widening of the road leading to the bridge is being considered.

MID-LANARKSHIRE.—Subject to the necessary approval being obtained, the District Committee of the Middle Ward of Lanarkshire has resolved to proceed with a scheme for the erection of additional houses. Their proposals under the new Housing Bill are to make lump-sum payments to private builders, and themselves to carry through their original scheme of 1919. They also propose to undertake a scheme of slum clearance as soon as possible. Over 2,000 houses will be provided under the schemes when completed.

MIDDLESBROUGH.—Plans for the construction of 14 houses by private enterprise, 17 for alterations to shop frontages or to premises, and one for extensions at the North Ormesby Hospital, were approved by the Middlesbrough Plans Committee at its last meeting.

MONMOUTHSHIRE.—The G.W.R. has notified the Abersychan U.D.C. that, as soon as materials have been collected to site, the building of bridges over the railway at Pontnewydd and Abersychan (low level stations) would be carried out.——The Llanfrechfa U.D.C. has decided to convert land at Tir Box into a burial ground, and has applied for sanction for a loan for the work.

MORPETH.—A plan for a proposed Welfare Institute to be erected at North Seaton Colliery, and seven plans showing house and business premises proposed to be erected on the Lynemouth estate have been approved by the R.D.C.

NEATH.—The Ministry of Health has notified the Town Council that, as the result of the recent public inquiry, sanction will be given to borrow £15,000 for acquisition and lay-out of Gnoll House and grounds as a district memorial park.

NELSON.—Mr. R. Jaques, architect, Railway-street, is preparing plans for extensions to the Grove House Nursing Home.

PENARTH.—The U.D.C. has decided to erect houses on Comerswell Garden site, in number up to 70, according to space remaining after allotment under agreement to private persons wishing to build ; the Council has decided that work will be carried out during the present summer months.——The U.D.C. has decided to erect underground conveniences and cloakroom, according to plans submitted by Surveyor some months ago.——Messrs. D. Davies, Penarth, have requested land from the U.D.C. to build 27 houses.

PENDLETON.—St. George's School, Whit-lane buildings to be modernised by structural alterations. Plans being prepared.

PLYMOUTH.—Plans passed by T.C. :—T. W. Box, two dwelling-houses, Cedarcroft-road ; Mr. Essery, bungalow, Bladderley-lane ; J. R. Randall, alterations, 44, Mutley Plain ; S. Edgcumbe, addition, 11, Cornwall-street ; S. Owen, addition, 4, Balmoral-place ; G. Oliver, addition, Russell-buildings, Frankfort-street ; A. Wilton, garage, 5, Holyrood-terrace ; S. Gerry & Son, addition to factory, Norley-place ; J. Horsham, public hall, &c., corner of Wolseley- and Tavistock-roads, Milehouse ; H. Symons, dwelling-house, Peverell Park-road.

PONTARDAWE.—The proprietors of the Pontardawe Steelworks (Messrs. Gilbertson), have offered the Works Committee to provide half the cost of purchasing a new motor ambulance for the employees, the remainder to be found by the men ; the offer has been accepted.

PORT TALBOT.—The U.D.C. has decided upon providing housing accommodation at Cwmavon and Port Talbot, and the Surveyor has been instructed to report on a site for up to 50 houses at each place. In addition, the Council has decided to confer with local master builders to hear suggestions for a building scheme for the district, possibly by action with Council under the Small Dwellings Acquisition Act provisions.

PORTISHEAD.—Plan passed by U.D.C. :—Bungalow South-road, for Mr. R. Thomas.

PRESTON.—Messrs. Spencer & Son, builders, Hershell street, are to erect medium-sized houses on a site of ten acres as an extension to Penwortham Garden Village.

PUDSEY.—Plans passed by T.C. :—New weaving shed at Fartown Mills, for Jas Banks & Sons ; also, several semi-detached houses at Uppermoor, for Mr. Alfred Lund.

RAWMARSH.—Application has been made by the D.C. to the Ministry of Health for approval of a scheme for the erection of 100 houses on the Haugh-road site.

RHONDDA.—The report of the Cwmparc and Treorchy Recreation Association, affiliated to the Ocean Colliery Co.'s Area Recreation Union, shows that land has been acquired for laying out recreation grounds, playgrounds, baths, bowling greens and public park, at Treorchy ; grant of £4,000 has been received from the Miners' Welfare Fund. By a concessionary arrangement with the Association, the Rhondda U.D.C. will build a stone wall to Tynabedw bridge.

RUGBY.—Plans passed by T.C. :—Mr. D. Mitchell, two dwelling-houses in Holbrook-avenue ; Mr. W. James, house, Dunchurch-road ; Mrs. Hinitt, house, Park-road ; Lodge Plugs, Ltd., extension to factory, St. Peter's-road.

SALFORD.—Plans passed by T.C. : Construction of garage, Edmund-street, Pendleton ; garage, 86, Hilton-street, Broughton ; lock-up shop, Port Soderick-street, Salford ; additions to warehouse, Adelphi-street, Salford ; alterations to British Legion Leaf Club (amended plans), 18, Leaf-square, Pendleton ; bank premises, 411, Bury New-road, Broughton ; "Dover Inn," 16, Fenney-street, Broughton ; construction of sanitary accommodation at premises in Worsley-street, Salford ; garage, 34, Fitzwarren-street, Pendleton ; garage, Garden-street, Broughton ; garage, New Hall-road, Broughton ; alterations to sanitary accommodation, "New Ship Inn," 151, Blackfriars'-road, Salford ; dwelling-house, 45, Plymouth-street, Broughton ; additions to works, Frederick-road, Pendleton ; bakery, Park-street, Salford.

SIDCUP.—Plans passed by U.D.C. : Four houses, in Longlands Park-crescent ; detached bungalow, Burnt Oak-lane ; conversion of stable into garage, corner of St. John's-road and High-street ; two detached houses, Christchurch-road ; dwelling-house, Corbylands-road ; garage, Victoria-road ; detached house, Christchurch-road.

SOUTH MIMMS.—Plans of a garage, for Mr. Haslam Walter, at the Corner House, The Avenue, Potters Bar, have been approved by the R.D.C.

SOUTHAMPTON.—Messrs. A. Brocklehurst & Co., architects, of Palatine Bank-buildings, Manchester, are preparing plans for a new Wesleyan Central Hall at Southampton. Plans have not yet been approved.

SOUTHEND-ON-SEA.—At a public inquiry into the proposal to spend £15,000 on a covered way on the pier from the entrance to the pavilion the scheme was opposed.

STANLEY.—Plans passed :—Two houses in Newton-hill, for Mr. W. H. Carr ; pair of semi-detached houses

at Aberford-road, Stanley, for Mrs. A. Furn; a house and bakehouse at Newton-hill, for Mr. A. Ward.

STOCKTON.—Plan passed by R.D.C.: Two bungalows, Preston, for Mr. J. W. Ransome, of Eaglescliffe.

SWANSEA.—Industrial development which, it is computed, will involve an expenditure of £5,000,000, is about to take place at Swansea. A group of Swansea and Port Talbot colliery owners are developing an estate of 700 acres at Ystalyfera in the upper reaches of the Swansea Valley. New cold stores are to be erected at Swansea King's Dock, costing £300,000. The Gravesend Steelworks are adding new mills.

TENTERDEN.—The R.D.C. has approved of plans for two cottages at Woodchurch, for Mrs. Wilson.

TREDEGAR.—The tender of Messrs. Rees Edwards, Derwen-buildings, Tredegar, has been accepted for the extensions to Tredegar Park Hospital, which include a new convalescent ward and a new operating theatre.

THE OUSE.—West Riding County Council Highway Committee has adopted a recommendation by the Bridges Committee to contribute an additional £5,000 to the cost of constructing a new bridge over the Ouse at Boothferry.

TYNEMOUTH.—Plans passed by T.C.: Two houses, corner of Syon-street and Percy Park-road, by Messrs. Cackett & Burns Dick, for Mrs. Connacher; two houses, Broadway, Kenners Dene Estate, by Mr. A. K. Tasker, for Mr. H. D. Burton; warehouse, Reed-street, North Shields, by Messrs. F. R. N. Haswell & Son, for Mr. Richards; two semi-detached houses, Broadway, Tynemouth, by Mr. A. K. Tasker, for Messrs. Middleton & Park; new stable, &c., Suez-street, by Messrs. F. R. N. Haswell & Son, for Mr. G. W. Stephenson; two semi-detached houses, Cleveland-road, by Messrs. Hays & Gray, for Messrs. Hodgson & Swan.

UCKFIELD.—Plans passed by R.D.C.: House, Tilsmore, Waldron, for Mr. G. H. Coates; bungalow, Nutley, for Mr. James; two houses, Horeham-road, for Messrs. Phillips & Sons; bungalow, Luckhurst Farm, Mayfield, for Mr. Morris; cottage, Upper Totease, Buxted, for Mr. S. Denman; two houses, Tilsmore, Waldron, for Mr. C. H. Ryder; cottage, Five Ashes, for Mr. A. Bassett; bungalow, Framfield, for Messrs. Markwick & Baalks; additions, Wood Farm House, Waldron Down, Framfield, for Mr. Hoather; bungalow, Goldstrow, Fletching, for Miss Clippingdale.

ULVERSTON.—Plans passed by R.D.C.: House at Scales, for Mr. F. Postlethwaite; house at Cartmel Fell, for Mr. Brian Batty; alterations to Barrowbanks Cottage, Staveley, for Captain Pickup; garage at Lindale, for Mr. F. Parker; house at Bessie Field, Lowick, for Mr. J. J. Satterthwaite; alterations at Sunny Bank, Torver, for Mr. Jno. Charnley.

WALTHAMSTOW.—Towards the building of the chancel and one bay of the nave of the new church of St. John, Mr. Harry Lloyd has promised a further contribution of £2,000.

WELLINGBOROUGH.—Addition to cottage hospital.

WEST AND EAST ARDSLEY.—Plans passed by U.D.C.:—Two houses at Bradford-road, East Ardsley, for Messrs. W. H. Heald and H. Dews; house at Bradford-road, East Ardsley, for Mr. O. Watson; house in Rein-road, West Ardsley, for Messrs. Harrison, Spenseley & Sons; conversion of house and shop into two houses and shop, at Upper Green, West Ardsley, for Mr. Sam Fisher; cowshed, stable and store room at Woodhouse-lane, East Ardsley, for Messrs. R. Holliday & Sons.

WILMSLOW.—The Conservative Club are proposing to erect new club buildings in Grove-avenue, estimated to cost £3,000. The architect has not yet been appointed. The secretary is Mr. W. O. A. Myles.

WORKSOP.—At a congregational meeting of St. Anne's Church, Worksop, it was decided to erect a new parish hall at an approximate cost of £2,500.

YORK.—The Education Committee have decided to purchase a site for a school on the Tang Hall Estate.——Plans passed by T.C.: W. R. DeBurgh, three streets, Stockton-lane; Mrs. Collinson, alterations, 45, East Parade; W. Dove & Sons, Ltd., workshop, Piccadilly; J. Terry & Sons, Ltd., refrigerating shed and subway, Clementhorpe: Miss Holland, additions, 75, East Parade; Adams Hydraulics, Ltd., store and loading shed, Peasholme Green; C. Grainger, offices, Peasholme Green; H. B. Cooper, garages, Dudley-street; L. Holt, house, Hobgate; Coulson & Layfield, two houses, Heslington-lane.

FIRES.

EDINBURGH.—Extensive damage has been caused by a fire which occurred in the premises of Pinkerton, Gibson & Co., Ltd., wholesale druggists and manufacturing chemists, North-East Thistle-street-lane.

GALASHIELS.—Damage estimated at several hundred thousand pounds was caused by fire on Saturday morning at the Buckholmside Skin Works, Galashiels, belonging to Sanderson & Murray, Ltd.

The Institution of Municipal and County Engineers.

A meeting of the West Midland District will be held at the Council House, Sutton Coldfield, on July 21, at which the following papers will be presented:—"Historical Notes," Mr. Reay Nadin, Town Clerk; "Electricity Works," Mr. T. Bloore, A.M.I.E.E., Electrical Engineer; "Municipal Works," Mr. W. A. H. Clarry, A.M.I.C.E., Borough Surveyor.

Members will be received at the Council House, Sutton Coldfield, by the Mayor (Councillor W. T. Harrison), and later will inspect the Town Hall fire station, electricity works, refuse destructor, Highways Depot, and other municipal places of interest.

NEW BUILDINGS IN LONDON.

Marble Arch.—BUILDING.—Messrs. F. & F. H. Higgs, Ltd., of Station Works, Hinton-road, S.E., are erecting a building at Marble Arch, W.1.

Bayswater. — ALTERATIONS. — Extensive alterations are being carried out at Bayswater-road, near Marble Arch, by Messrs. F. J. Coxhead & Co., builders, of Leytonstone. Mr. Delissa Joseph, F.R.I.B.A., of 2, Basinghall-avenue, E.C., is the architect.

Marylebone.—BUILDING.—Now the old Deaf and Dumb Church has been demolished, a new building is being erected next to Selfridge's in Oxford-street.

Ludgate Hill.—BUILDING.—Messrs. Greenwood & Co;, Ltd., builders, of 301, Brixton-road, S.W.9, are erecting a new building in London House-yard, near St. Paul's.

Covent Garden.—ALTERATIONS.—Alterations are being carried out on an extensive scale at 28, Wellington-street by Messrs. W. Downs, Ltd., builders, of Hampton-street, Southwark, for Messrs. Da Costa Gerald, fruit broker.

St. James' Park.—REBUILDING.—A new building is being erected at Petty France, St. James's Park. The builders are Messrs. C. P. Roberts & Co., Ltd., of 36, Tyssen-street, Hackney.

Ealing.—PAVILION.—The Ministry of Health has given sanction to a loan of £550 for the construction of a sports pavilion in Pitshanger Park.

Bayswater.—RECONSTRUCTION.—Two large mansions, hitherto known as 13 and 14, Connaught-place, having frontages to Hyde Park, Connaught-place, and Stanhope-place, are in course of reconstruction and conversion into eleven residential flats. The average accommodation will consist of inner hall, dining-room, drawing-room, four bedrooms, bathroom, two lavatories, kitchen and kitchen offices. The drawing-rooms on the Hyde Park frontage are 22 ft. by 14 ft., exclusive of the bays, while some of the kitchens are 17 ft. by 12 ft. The entrances from Connaught-place are to be abandoned, and a new entrance, staircase, and passenger lift will be formed in Stanhope-place. The rooms will in many cases be enlarged by the formation of bay windows; and an emergency staircase, enclosed in a tower, has been formed on the Connaught-place frontage; this will also be used as a service staircase to supplement the service lifts already provided. A central system for the supply of hot water, day and night to all the flats will be installed. The present high enclosing wall will be removed and open iron railings substituted, while the forecourts will be laid out as gardens. When the internal reconstruction and modernization has been completed, and the new drainage system installed, the whole of the premises will be redecorated. The work is being carried out by Mr. F. J. Coxhead, of Leytonstone, and the architect is Mr. Delissa Joseph, F.R.I.B.A.

Wood Green.—HOUSES.—The U.D.C. is to encourage builders to erect superior type houses by offering financial assistance, inviting the wider use of the Small Dwellings Acquisition Act, and making it easier for purchasers to obtain advances from building societies.

Lewisham.—HOUSES.—Plans passed by B.C.: Two houses, Baring-road, for C. Cooper; seven houses, Woolstone-road, for Edmonds & Beale; three houses, Wiverton-road, for W. Frampton; addition, 33, High-street, Sydenham, for C. J. Cleeve & Son; house, Senlac-road, for Eaglen Bros; two houses, Stanstead-road, for P. Smith; house, Marvel-lane, for G. W. Crosley.

Party Wall Problem.

We have received an inquiry from a firm who are developing a large estate on the outskirts of London, mostly consisting of semi-detached houses, and are anxious to discover or devise some method of construction of the party walls so as to deaden the sound and noise arising between two houses placed in such close proximity. It is intended to erect two-story houses and to build the party wall in 9 in. brickwork.

NEW BUILDINGS IN SCOTLAND.

Kirkcaldy.—HOUSES.—Plans for the erection of 32 houses on Overton-road have been submitted to the Board of Health by the T.C. for their approval, and plans for 28 houses to be erected in Hendry-road have been sanctioned.——The following plans have been passed: John W. Blyth, garage at Wilby House, Loughborough-road; Pathhead and Sinclairtown Co-operative Society, alterations to shop fronts, 13–17, Links-street, and a joiner's shop in Mid-street; Kirkcaldy Trades Labour Council, conversion of part of Wemyss-buildings into a hall with retiring rooms and committee rooms; the Scottish Cinema & Variety Theatres, Ltd., additions at Picture Palace, Whytes-causeway; W. Paterson & Sons, Dundee, shop front at 79, Dunfermline-arcade, from Wemyss-buildings, High-street, to Douglas-street; J. D. Swanston, alterations at property at corner of High-street, and Redburn Wynd, and the conversion of "Sunnybrae," Milton-road, into two houses; Michael Nairn & Co., chemical laboratory at the Scottish Linoleum Works, Victoria-road; Saxone Shoe Co., alterations at 100, High-street; G. Penman, house and garage in Viewforth-terrace; Woolworth & Co., alterations at the Crown Hotel-buildings, High-street; and the Kirk Session of Pathhead Parish Church, a chancel at the rear of the church in Church-street.

Milngavie.—HOUSES.—The Dean of Guild Court has passed plans for 32 two-apartment houses and eight houses of three apartments, to be erected by the Town Council.

Stirlingshire.—PAINTER WORK AND REPAIRS.—The Education Authority has agreed to spend £2,693 on painter work and over £1,000 on repairs at the various schools in the county during the summer term.

Portobello.—FIRE STATION.—The Plans and Works Sub-Committee of the Edinburgh Town Council has suggested a site for the new fire station in Rosefield-avenue.

Aberdeen.—VARIOUS.—The Corporation Plans Committee have passed the following plans: House and garage, Anderson-drive, for Miss Imlay, Bon Accord-street; alterations, 145, Union-street, for Birrell, Ltd.; alterations at 260–262, George-street, for the Star Boot Co., Ltd.; car-shed at rear of 8, King's-gate, for Mr. G. A. Wilson; additions to auction mart, Powis-terrace, for Reith & Anderson, Ltd.; house, Queen's-road, for Major A. L. Mackinnon; drill and gymnasium hall at rear of 4–5, Golden-square, for Young Men's Christian Association; pavilion, Advocates-road, for Hawthorn and East End Football Clubs; alterations and additions at the Convent of the Sacred Heart, Queens Cross; house on the road from Craiginches to Bridge of Dee, for the Aberdeen Baker Incorporation.

Wages on Public Works.

The Public Works Conciliation Board has issued an award, dated June 22, 1923, fixing the following rates of wages to apply in the City and County of London, and the districts of all the local authorities the whole or any part of whose district lies within the Metropolitan Police district, for the three months of July, August, and September:—Blacksmith, 1s. 8d.; concrete leveller, 1s. 3½d.; duct or earthenware drain layer, 1s. 4½d.; fitter, 1s. 8d.; granite mason kerb, &c., 1s. 9d.; granite sett dresser, 1s. 8d.; jointer, 1s. 4½d.; kerb fixer, 1s. 8d.; pavior, 1s. 8d.; petrol locomotive or roller driver, 1s. 5½d.; pipe jointer (iron up to 6 in.), earthenware or concrete pipes and conduits, 1s. 4½d.; pipe-jointer (iron) above 6 in. diameter, 1s. 5½d.; platelayer, 1s. 4½d. to 1s. 5½d.; platelayer labourer, 1s. 3½d.; pneumatic pick operator, 1s. 4½d.; rammerman, 1s. 4½d.; scaffolder, 1s. 6½d.; screeder, 1s. 4½d.; steam roller driver, 1s. 7½d.; street mason and flag dresser, 1s. 8d.; tarpot man, 1s. 3½d.; timberman, 1s. 4½d.; wood block layer, 1s. 4½d.; watchman, 7s. 6d. minimum day or night; men working in "boots," 1d. per hour extra. The hours of labour and overtime rates remain as agreed on March 11, 1920.

L.C.C. Central School of Arts and Crafts.

In view of the Imperial Education Conference to take place in London this month, it has been decided that the present exhibition of work of the L.C.C. Central School of Arts and Crafts, Southampton-row, W.C.1, shall remain open from 10 to 5 daily, Saturdays 10 to 12, until July 20. On the opening of the London Education Exhibition at the adjoining London Day Training College, on Tuesday, it will form a part of that exhibition. Admission is free on signing the visitors' book.

PATENTS.

195,661.—T. Gare: Method of treating wood.
195,699.—Oritur Manufacturing Co., Ltd., and J. W. G. Starkey: Door furniture.
195,724.—S. L. Duncombe: Grip for slats used on lifts, stairs and corridors.
195,772.—W. H. Dorman & Co., Ltd., and O. H. G. Steed: Pipe joints.
195,823.—T. Greaves, W. H. Darbourne and V. Warner: Timber-drawing appliances.
195,859.—M. Kahn: Centering or false work for concrete floors.
195,862.—F. Hatcher: Mortise and tenon joints.
195,771.—Parker, Winder & Achurch, Ltd., and G. P. Achurch: Concrete mixing-machines.
195,886.—C. W. Dwyer: Fumigant preparation for destroying woodworm.
195,909.—Ryan Manufacturing & Construction Co., Ltd., and J. Ryan: Process of manufacturing ceiling and partition slabs, or building blocks.
195,914.—J. C. White: Ceiling roses and junction boxes.
186,937.—J. Mesple: Fastenings for doors.
196,687.—E. J. Logan: Concrete castings for structural steel and other members.
196,769.—W. Anderson: Means for preserving stone, brick, and like work.
196,773.—E. Showell & Sons, Ltd., and C. P. Showell: Sliding bolts for doors.
196,823.—A. H. Attwater: Concrete building block.
196,826.—R. C. Durrell: Collapsible box or case.
196,847.—W. M. Dodd: Building blocks.
196,863.—A. Thee: Building blocks or slabs.
176,755.—J. Clement: Windows.
197,349.—W. E. Muntz: Means for securing windows, doors, and gates.
197,375.—C. P. Ellis: Device for retaining sliding doors in open, closed, or intermediate positions.
197,380.—J. Ver Mehr and J. S. Owens: Metallic sheet piling.
197,411.—A. Litster: Lift cages and doors.
197,413: F. Simmons: Stools.
197,422.—H. Baxter: Folding tables or trestles.
197,430.—A. Hiley and E. Le Bas: Construction of concrete piles or columns.
197,448.—M. Fiebig: Timber joint.
197,466.—C. Winn & Co., Ltd., and A. Mousley: Water taps.
197,467.—G. Burton: Trestles, saw-horses, and the like.
197,475.—G. G. Parnall and A. E. Murray: Fastenings for the doors of show cases, cabinets, or like furniture.
197,547.—A. Wallis: Machines constructed for distributing grit, gravel, and the like materials on roads and pathways.
197,551.—G. Atterbury: Cementitious nailing-blocks and grounds for builders' use.
197,584.—T. Bailey: Method of fastening slates and tiles to roofs.
197,601.—R. W. Anderson: Composition for use in covering floors, decks, walls, or bulkheads.
196,314.—H. Wade (Societa Anomima Brevetti Bagala): Bricks.
196,339.—H. Mercer: Show-cases for shop windows.
196,342.—M. Bacchiolelli and A. Meifred-Devals: Process of utilisation of igneous rocks for the manufacture of ceramic products.
196,345.—H. Aves, D. J. Edmonds, and B. S. Dunn: Locks.
196,348.—J. A. Law (American Abrasive Metals Co.): Manufacture of material highly resistant to penetration.
196,363.—Gloucestershire Aircraft Co., Ltd., H. P. Folland and H. E. Preston: Constructional metal work.
196,404.—P. J. White (E. Schoepke): Stamping-presses for moulding building-blocks and other articles from plastic material.
196,424.—A. B. Horne and A. J. Hubbard: Paving-blocks.
196,444.—R. Denham: Chair and other seats and backs.
196,466.—J. McLaughlan: Metallic roofing-sheets.
196,484.—W. G. Bailey: Machines for making concrete building-blocks or slabs.
196,487.—M. McGinness: Impact pulverizers.
196,496.—P. T. Clark: Ventilator.
187,579.—Buhler Geb: Manufacture of Portland cement.
192,037.—Wendel et Cie, Les Petits Fils: Liquid-air blasting-cartridge.
196,955.—P. N. Lancaster: Apparatus for use in the construction of concrete piles.

* All these applications are now in the stage in which opposition to the grant of Patents upon them may be made.

Inn at Stirchley, Birmingham. Mr. Arthur Edwards, Architect.

[This building shows the effect obtained by pointing brickwork with white cement, which can be compared with that part of the walling which was not pointed when the photograph was taken. The builder is Mr. W. Jackson, of Langley Green, near Birmingham. "Atlas White" cement was used, and 2¼ in. Black Country brindle bricks.]

* These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10% on the prime cost without establishment charges. A percentage of 1½ should be added for Employers' Liability and National Health and Unemployment Acts and from 1s. 6d. per £100 for Fire Insurance. The whole of the information given on this page is copyright.

TRADE NEWS.

"Pudlo" brand cement waterproofer was used in the construction of Blackpool Open-Air Bath, which we recently described.

Richard Melhuish, Ltd., of Fetter-lane, are sending out their catalogue dealing with ironmongery, electrical and gas fittings free of cost.

The Waygood-Otis Athletic Club are holding their fourteenth annual sports and garden party on their ground at Whitefoot-lane, Bromley-road, Bellingham, on July 7, at 2.30 p.m.

The British Roofing Co., who specialise in the well-known "Alligator" brand of roofing felts, damp-courses, asbestos slates and sheets, have removed their new general offices to Maxwell House, 11, Arundel-street, Strand, W.C.2. The new telephone number is Central 4824.

Messrs. R. Jenkins & Co., Ltd., boilermakers, tankmakers, and coppersmiths, of Rotherham, have opened offices and showrooms at 15, Victoria-street, S.W. Their London representative is Mr. A. Seymour Smith, who is assisted by Mr. Cedric Jenkins.

A single-light stained glass window which has been placed in the north transept of St. John's Church, Roundhay, Leeds, in memory of Second-Lieutenant Tom Willey, the elder son of Mr. Arthur Willey, M.P., and Mrs. Willey, was from the studios of Mr. Chas. E. Steel, of Leeds.

The Columbian Fireproofing Company, Ltd., of Windsor House, Victoria-street, London, S.W.1, have issued a new catalogue illustrating their system of fireproof flooring, now in use at the Ritz Hotel, Harrods' Stores Depository, London City and Midland Bank (Birmingham), Metropolitan Markets Cold Storage (Smithfield), and other large buildings in different parts of the country.

A new building material, a wallboard, in the form of a combination of wood and metal, has been put on the market by Messrs. Venesta, Ltd., of No. 1, Great Tower-street, E.C. 3. The centre of the boarding (which is called "Plymax") is formed of a core of light-weight plywood, acting as a spacer or distance to light gauge steel sheet cemented to the faces. The spacing of the metal faces on each side of the plywood gives the material great stiffness, as the metal is in the position of the flanges on a rolled I-section beam, while the wood core takes the place of the thin central web. It is claimed that this material is the stiffest known form in which flat sheets can be produced for a given weight. The conductivity of heat and cold is practically that of wood, while the fact that the steel faces protect the wood core from air makes it extremely fire-resisting. The steel is coated with a film of lead or zinc to protect it from decay, and it is claimed that the material is not affected by changes of temperature up to 212 deg. Fahr. The material, which is produced in standard size sheets, should be especially suitable for use for partitions, shelves, fireproof doors, stair-treads, lockers, ice chests, panels in metal and wooden furniture, in vehicle construction, for bins, silos, drying and refrigerating machinery, lift cages and wells, air trunking, &c.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach him not later than Tuesday evening.

NELSON.—For painting at parks and bowling greens, for Nelson T.C. :—

Victoria Marsden and Walverden Parks—
*I. Wilkinson.

Carr-road and Thomas-street Bowling Greens—
*T. Ryecroft.

NEWBURY.—For heating apparatus at Corn Exchange, for the T.C. :—

*Keith & Blackman £468

NEWBURY.—For alterations and repairs at Corn Exchange, for the T.C. Borough Surveyor, Newbury :

Cooke Bros., Newbury	£1,800
*Hoskings Bros. Newbury	1,788

OGMORE AND GARW.—For erection of 12 houses at Llangeinor and making of road and sewers for same, for the Ogmore and Garw U.D.C. :—

*T. Sampson (present contractor—	
Houses, each	£389 10 0
Road and sewers	208 7 6
T. Jenkins, Tonyrefail—	
Houses, each	£546 17 3
Road and sewers	489 5 0
D. J. Davies, Blaengarw—	
Houses, each	£362 13 0
Road and sewers	427 10 0

OLDHAM.—For extensions to Strendales Hospital, for Oldham T.C. Messrs. Taylor & Smith, architect, 29, Queen-street, Oldham, estimated cost £10,000 :—

Builders' work—
*S. & J. Smethurst, Oldham.

PENDLETON.—For three shops in Gerald-road, for Messrs. Sutton & Co., Estate Agents, 60, Spring-gardens, Manchester :—

*Moston Brick & Building Co., Manchester.

PLYMOUTH.—For painting at Smeaton Tower, for the T.C. :—

*A. J. Osborne £122 12 6

RAWMARSH.—For the erection of 12 houses, with fencing, &c., on the Haugh-road site, for the U.D.C. :—

*A. J. Pugh £4,428

RIVER IRK AND ROCHDALE CANAL.—The amount of the successful tender submitted by Messrs. Lambourne & Co., Ltd., at Openshaw, for steelwork for bridge over Rochdale Canal at Aytown-street was £2,066 9s. 6d., and not £266 9s. 6d., as reported in last week's *Builder*.

SALFORD.—For erection of open-air school on Bolton-road playing field, for the T.C. :—

*A. Fenton, Manchester £4,350

SALFORD.—For painting of Royal Technical College, for the T.C. :—

*W. Walton, Pendleton £479

SALFORD.—For painting Halton Bank School, for the T.C. :—

*J. Evans £376

SALFORD.—For painting Girls' Secondary School, for the T.C. :—

*P. Cameron £190

SALFORD.—For slating shed at Open-air Council School, for the T.C. :—

*W. Royle & Co., Manchester £300

SALFORD.—For the provision of tramway shelters, for the T.C. :—

*James Allan, Sen., & Son, Ltd., Glasgow, Irwell-street £104
*James Allan, Sen., & Son, Ltd., Glasgow, Frederick-road Junction 150
*James Allan, Sen., & Son, Ltd., Glasgow, Home for Blind, Eccles Old-road 150
*John Bland & Son, Ltd., Salford, Cross-lane (corner of Broad-street) 150

SUNBURY.—For erection of new Primary School for the Education Committee of the County Council of Middlesex. Mr. H. G. Crothall, County Architect, Guildhall, Westminster :—

W. H. Gaze & Sons, Ltd., Kingston-on-Thames	£14,373
Geo. Challis, Brentford	13,575

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXV.—No. 4197. JULY 13, 1923

THE COST OF BUILDING.

IT will probably be admitted even by the layman who has no special knowledge of or interest in building that at the present time few national problems are of greater importance than those connected with the building industry. The popular conception of this problem is confined to questions of housing, and when no special interest in housing exists there is yet a general feeling among all thinking persons that on grounds of social economics the question of housing makes imperative claims for solution. The basis of all real peace and prosperity rests upon happiness and contentment, and for the vast majority these attributes centre in the home circle and depend upon the material conditions of the home more than on anything else. In reality, however, the problems of the building industry cover a much wider field, involving institutional, commercial and other needs upon which the community depends, and if these demands affect social economy less directly than housing they are none the less bound up with national development and trade expansion; the latter urgently necessary to assist in producing the material resources required to produce capital for house building and wages wherewith to produce conditions for obtaining economic rentals.

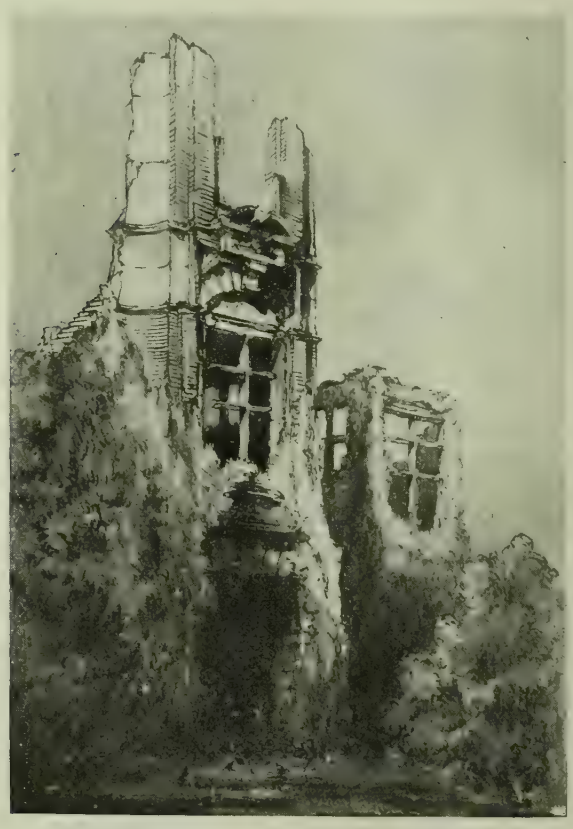
There are districts in London where the rebuilding activities suggest that trade stimulus has already reached a high pitch, but those who are able to look at the situation from a wider viewpoint know that some, at least, of these activities result from the falling in of leases necessitating rebuilding, and are by no means a criterion of the industrial position generally.

The situation in which we find ourselves depends upon many factors of international character which we can only control very partially, if at all, the chief of which is the economic position of Germany. It is not our place to discuss questions of international policy, but, writing as we are at a moment when a few weeks may bring European changes affecting our national life for many decades, we cannot refrain from referring to the gravity of the situation and expressing the hope that our rulers will spare no efforts to effect a compromise which will avert a rupture with friendly nations and the collapse of central Europe, which would bring disaster to our trade far greater than is generally supposed, and would put back for an indefinite period the many reforms and building developments which are being so earnestly sought.

Let us turn, however, to matters more immediately associated with conditions at home. The position of labour is for the time being stabilised, though we do not agree that the conditions are ideal. With the award upon wages we will not concern ourselves; both sides wisely consented to submit their differences to arbitration, and the agreement was a very timely one; but that the limitation in the matter of hours is by no means wholly of benefit to labour we think some of our friends among the operatives will agree, for there are many who fail to endorse the maxim that spinning out work makes more to go round, which is based on the false premise that some fixed and definite quantity of work is the subject for division, whereas in reality work available expands in accordance with the incentive to putting it into operation on the laws of economics offered to the prospective building owner. Our views on this subject, which are that everyone should be free to work as long as he likes for as much as he is worth, are known to most of our readers. A question of cost of building, which is still open to modification, is the price of building materials. Prices of labour and materials killed the re-start of the building industry after the war, and this was largely due to the Government's well-intentioned, but disastrous, housing scheme, which, conceived with an innocence showing a strange lack of business perception, gave much encouragement to human acquisitiveness.

The Minister of Health in his anxiety to avoid any repetition of the previous disaster, has appointed a Committee to inquire into the price of building materials, which after two months' work has just presented an interim report, from which we quote on p. 68. We commend this early publication: inquiries of this kind, as we know from past experience, are apt to become so protracted that when completed their value is largely lost, because conditions which prompted the inquiry have materially altered. This Committee, under the Chairmanship of Sir Halford Mackinder, has made inquiries in fourteen centres and obtained information from builders and contractors on the one hand, and manufacturers and merchants on the other, the information having been furnished through the chief technical advisers to the local authorities.

In order to obtain uniformity, actual prices of 27 materials employed in the construction of a workman's house have been obtained at specific dates and in a subsequent report it is proposed to issue a statement of total cost of such materials (which represent 95 per cent. of the building) for a defined home. These prices are set out in a valuable schedule and show the prices of materials in April and in June of this year. The features of the table are the evidence it produces that local materials vary considerably in price, and that except for light castings (the subject of an explanatory note) there has been no general increase in prices since April. It is proposed to issue this table revised every month, and given a sufficient circulation this ought to do much to make any upward trend immediately apparent. Two groups of materials are singled out for comment—light castings, the cost of which increased with the cost of pig iron, and bricks, which are stated not to have risen in cost between April and June. From our own information there would appear to be a tendency here and there to hold supplies for better prices, and we think that the Committee's hardest task is yet to come. Our experience is that it is very difficult for a Committee definitely to refute the necessity for increased charges which can generally be substantiated on paper, and the refutation of which, if at all, would involve a long accountancy investigation. Very good work, however, can be done by focusing public attention upon prices, for public opinion is probably much more thought of than are Government reports. One thing at least we hope will not be lost sight of as proved by previous experience, which is, that prices will follow the laws of supply and demand and that appeals for the regulation of prices on any other grounds are a mere waste of time. It thus behoves those who build to see that demand does not outstrip supply if building prices are to remain at a reasonable figure. We are all anxious to see a genuine revival in the building trade, more especially the provision of those small houses which have been promised so long, but the burden on taxation for these houses is already large, and if attempts are made to take an undue advantage of the situation the sooner such building is stopped, and those waiting for such houses are referred to the causes for further delay, the better for everyone.



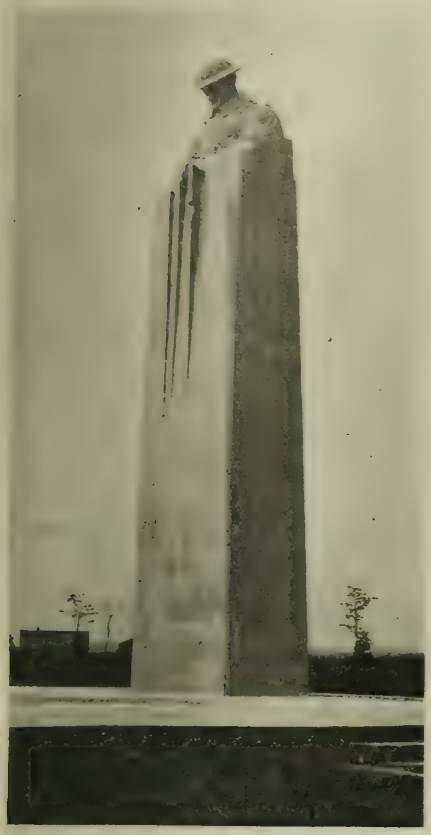
NOTES.

The Competition System.

The increasing frequency of competitions has drawn special attention again to the conditions under which they are held. Some architects of wide experience hold that the balance of advantage is against them, though occasionally they give architects a chance to exercise their skill in practice which they could hardly hope to obtain in any other way. The subject of a competition may be one which is best studied by an experienced and skilled architect in consultation with the clients, whilst in some cases it may be one in which with clearly-defined wants and conditions the forces of competitive artistry may have a fair chance. But often enough a competition discloses more definitely what the promoters do not want than what they do. The best judges in a competition ought perhaps to be those who have taken part in it, and it would be very interesting to see a competition adjudicated by the competitors. Here again, however, there are difficulties, for in a competition which has to be decided by intellect and artistic perception it could hardly be maintained that the majority would know best. We might, for instance, take the recent Bournemouth Pavilion competition, and ask whether we should choose to be judged by the majority of the designers where so small a minority indicate their capacity for judgment by the designs they have submitted. We can well believe that the article by Mr. Howard Robertson, which we publish this week, may voice the opinions of a great many, but some architects of experience do not support the view that three well-known and able assessors come to any wiser decision than a single one. The large view to take in a competition decision is to give the work to the one who appears likely to produce the best building in its twofold aspect of plan and elevation, providing, of course, that the main essentials of the promoters have been supplied.

The Manchester Case.

Have we gone past the time when an important body like the Manchester City Corporation are ready to forgo the advantages of competition? It appears that there can be no competition now for their proposed war memorial, as the Corporation decline to abide by the decision of the assessor nominated by the R.I.B.A. The interest now lies in the question as to how they will be guided in their choice of an architect. Manchester is singularly unfortunate in its past history of the City Art Gallery competition and its long indecision about the Piccadilly site. Why cannot they agree to an open competition with such terms as will secure the contributions of the best architects? Surely they might risk placing their confidence in the decision of such an assessor as Dr. Percy Worthington, or at least in the considered judgment of a jury of three able architects.



Houghton Towers, Bedfordshire.
From a Sketch by Mr. E. B. Musman, A.R.I.B.A. (*See p.* 49.)

Commemorations.

The variety of forms in which commemorations express themselves, and the immense impetus for all kinds of memorials at the present time, are not without perils. It is easier to erect statues than to remove them after erection, and there are not a few who are asking in the light of recent experience whether the times favour this particular form of commemoration. As an example of this satiety it is interesting to note that the Paris Municipal Council has decided for the present not to consider any applications for sites on which to place new statues, and this decision, so a contemporary informs us, is to stand "until some general policy in regard to the erection of statues in Paris has been determined." It is but recently that at a meeting of the St. Pancras Borough Council one of the Councillors, in reference to the portraits of the past mayors which adorn the walls, is reported to have said: "These pictures are becoming a nuisance, and I trust the time is not far distant when the mayor of the borough will be big enough and strong enough to put aside these childish commemorations." We should be sorry even to appear to deprecate suitable memorials, but recent instances leave us under some apprehension as to the feelings of posterity in the matter. It was said of some period that its great men were a proof of its barbarity, and when we see enormous heads poised on enormous columns, and other strange vagaries which have recently been established to the permanent disfigurement of the localities in which they are placed, we are inclined to ask whether some better appreciation and more restraint in the erection of such memorials is not urgently desirable.

Architect and Craftsman.

Many and various are the opinions put forth for the absence of first hand, vital craftsmanship in architecture, a neglect most noticeable in recent developments of industry wherein the new "salesman's" architecture is found to include no touch of it. Professor Lethaby, it appears to us, reaches the heart of the matter in saying that "there can be no decoration which is not vital workmanship." Somewhat misleading views are unfortunately prominent as to the cause of the absence of the same, for any one acquainted with the available resources of good craftsmanship knows that there is plenty of it, but that it is given little employment. Architectur

Canadian Battlefield Memorial at St. Julien, Ypres.

Mr. F. Chapman-Clemesha, Sculptor.

[This design was premiated in the recent competition assessed by Professor C. H. Reilly, F.R.I.B.A., the late Frank Darling, and Mr. Paul Cret, and was unveiled by H.R.H. the Duke of Connaught on July 8. The memorial, which was built by the Federal Government of Canada, is 35 ft. high, and is of grey granite from Brittany.]

to-day seldom reaches this more intimate and extended vision, and is poorer for the loss of it; nor is the human loss any less, in that the best powers of the nation are so far denied opportunity. When, however, the absence of good craftsmanship is denied it is not unusual to find advocates of this view falling back on another defence, *i.e.*, that if there is vital craftsmanship people won't pay for it, the inference being that vital craftsmanship is too expensive. The very opposite is more nearly the truth, for it is bad art which seen truly is so expensive to the nation. Nor is it the case that to-day the craftsman demands high payment; on the contrary, considering the demands that his work makes upon him, his prices are low, and estimated on any other employment would appear very inadequate. The public should not be misled into believing that there is a lack of good craftsmanship, or that the prices asked account for the lack of opportunity. On the architect in this relation rests a great responsibility to recognise and make every opportunity for vital workmanship, and he will add a new dignity to his own work in doing so.

Additions to the Tate Gallery. Accommodation for the housing of the gift of pictures by the late Sir Joseph Duveen is now being arranged for through an extension to the west of the Turner wing of the Tate Gallery. The architects' plans have been passed and the work can now be started. Some of the pictures are already being exhibited in one of the smaller galleries in addition to 36 pictures received under the Lane bequest and others acquired by gift or purchase. If we regard these extensions with the other collections already available to the public, London can lay claim to be considered almost the finest centre for the study of art.

Decoration of Public Buildings. The letter, by Mr. Thomas Derrick, to which we referred in our issue for June 15, avoids the mistakes of recent proposals for the employment of students on our important public buildings, which, he said, unless they were led by artists of attainment and long practice, showed a want of appreciation of the proper claims of such work. It was all the more to be deprecated from the fact that the proposals ignored the claims of practising artists dependent on their work and far more fit to exercise their abilities in such a way, and which this scheme discountenanced. It has not succeeded because it could not succeed, as the approach was theoretic and ignored the facts that govern such work. We do not think that our public buildings should be experimented on in such a way as was suggested, but in the more modest work of house decoration, approaching it in the ordinary way of the painter and decorator, there is a field which, if cultivated, should open the way to a new tradition of such painting—bringing a fresh impulse of treatment and design where it is much to be desired. Expense should not deter us, for, as Mr. Derrick points out, "it is not extravagant to use artists, any more than it is extravagant to use miners and engineers."

The Bournemouth Competition. Sir Edwin Cooper, the Assessor in this important competition, is to be congratulated on the expeditious manner in which he made his award, no light task when some 97 designs were submitted. It is trying to competitors who have spent much time on their designs to have to wait months before the result is made known, as is so often the case.

Houghton Towers, Bedfordshire.

From a Sketch by Mr. E. B. Musman, A.R.I.B.A.

GENERAL NEWS.

Professional Announcements.

Having been appointed Resident Architect for the Offington Park and Angmering-on-Sea Estates, Mr. G. H. Treacher, of Eagle Chambers, Kingston-on-Thames, desires catalogues in so far as relate to domestic work. Address: Offington Park Estate Office, Broadwater Green, near Worthing, Sussex.

Mr. Victor H. Wilson, L.S.A., architect and surveyor, has commenced an architectural practice at 91, London-road North, Lowestoft (telephone, Lowestoft 468), and will be glad to receive catalogues, &c.

The Globe Playhouse.

The Cambridge University Press have in course of preparation "On the Site of the Globe Playhouse of Shakespeare: Lying to the North of Maiden-lane, Bankside, Southwark," by Mr. George Hubbard, F.S.A., F.R.I.B.A. Mr. Hubbard's aim is to show that "The Globe" was on the north side of Maiden-lane, now known as Park-street, Southwark.

Church and Schools at Little Kimble.

The new Church and Schools at Little Kimble, Bucks., was opened on Monday, by Dame Margaret Lloyd George, and the dedicatory address given by Dr. Clifford. The new buildings, in the late Gothic period, are in red sand-faced bricks with stone dressings to windows and doors. The roofs are covered with sand-faced tiles, and the principal doorways are in oak. Mr. G. Reginald Farrow, F.R.I.B.A., and Mr. Sydney R. Turner, of Amberley House, Norfolk-street, Strand, are the architects, and Messrs. Crook & Judd, of Waddesdon, are the builders, who also are responsible for the oak seating. The movable screens were supplied by the Bennett Furnishing Co., and the woodblock floors by Messrs. Steven & Adams.

Houghton Towers.

In the House of Commons—

Mr. Wells asked the First Commissioner of Works if he would make an order under the Ancient Monuments Consolidation Amendment Act, 1913, for the preservation of the ruins of great literary and historical interest, known as Houghton Towers, Bedfordshire.

Sir J. Baird said that as the ruins in question had not been recommended by the Ancient Monuments Board to be scheduled under the Act as of national importance, he regretted that he did not see his way to issue a Preservation Order, which would have to be confirmed by a Bill in Parliament. He, however, greatly deplored the proposed destruction of such an interesting building.

York Archæological Society.

Yorkshire Archæological Society recently visited Whitby Abbey. They inspected the work carried out by H.M. Office of Works under the supervision of Mr. C. R. Peers, F.S.A., Chief Inspector of Ancient Monuments. Mr. Peers related some of the history of the Abbey and said they had evidence of ecclesiastical settlements of more than 1,300 years. Whitby was commenced at the latter part of the seventh century and differed from older monasteries inasmuch as it was founded as a missionary centre. It was hoped that evidence would be forthcoming to indicate some definite plan as to the lay-out of the old monastery. But so far only foundations of simple buildings and remains of huts constructed of clay and hazel rods had been discovered. The foundations of a previous church have been found.

Bartlett School of Architecture.

The prize list of the University of London Bartlett School of Architecture, for the Session 1922-23, is as follows:—Donaldson Silver Medal, O. M. Welsh; Herbert Batsford Prize (first year), H. Kendall; Andrew Taylor Prizes, (*a*) Second Year Building Construction, E. Forster, (*b*) Third Year Studio Work, G. L. L. Morgan; Ronald Jones Prizes: (*a*) Mediæval Architecture, Leonora F. M. Payne, (*b*) Renaissance Architecture, F. S. Bardell; Lever Prizes in Architecture: First Prize (£15), Barbara Pouschkine; Second Prize (£10), E. Burckhardt and M. A. Sisson; Lever Prizes in Town-Planning, First Prize (£15), H. S. Triscott; Second Prize (£10), L. M. Austen and J. R. M. Simpson. First-class Certificate in Architecture, Helen M. Benham.

Moor Park, Rickmansworth.

We are informed by a correspondent that Mr. Willard Reed Messenger, of New York, who has constructed apartment houses in New York, has had a conference with Lord Leverhulme in London in connection with the development of the 3,000 acres' estate at Moor Park, Rickmansworth. Moor Park is a mansion built by James, Duke of Monmouth, in 1670, and is one of the finest examples of Italian architecture in England. Sapriani painted the ceiling in the great dining-room, and Sir James Thornhill the classical decorations in the saloon and hall.

Gothenburg Exhibition and Conference.

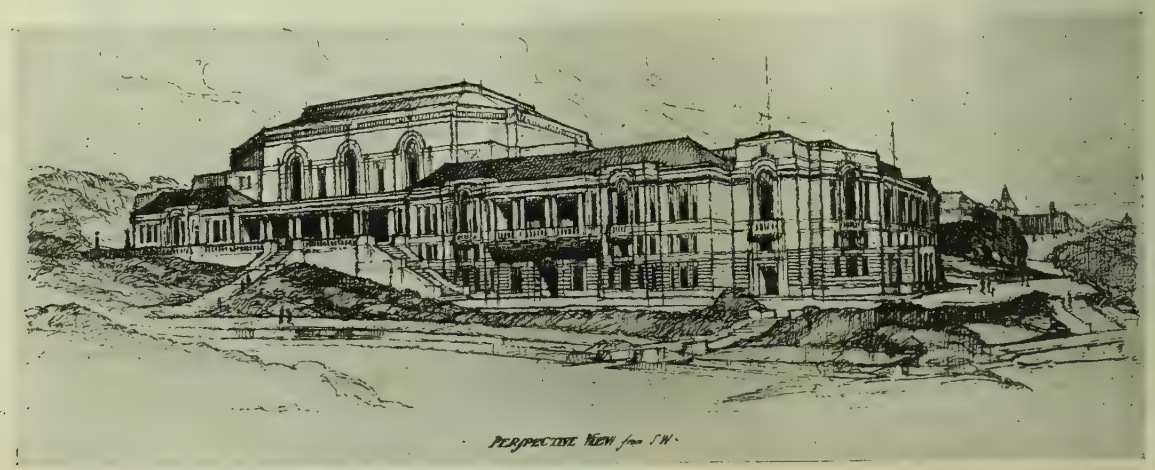
The Cities and Town Planning Exhibition which will be held in connection with the 300th anniversary of the foundation of the City of Gothenburg, promises to be one of the largest and most important exhibitions of its kind held for many years. The whole of the 9,000 square metres of floor space originally appropriated for the purpose will be utilised, and additional buildings have also been acquired. Specimens of work from all parts of the world will be exhibited, and architects, engineers, town-planners and municipal and State representatives from practically all countries will attend the International Conference organised by the International Garden Cities and Town Planning Federation. A party will leave London on July 31st by the ss. *Patricia*, arriving at Gothenburg on August 2nd. Further details regarding this party can be obtained from the Organising Secretary, International Garden Cities and Town Planning Federation, 3, Gray's Inn-place, W.C.1.

COMPETITION NEWS.

Abbeydale.

In the competition for designs for a new golf club house, the assessor, Mr. W. Herbert Fowler, of London, has placed first the design submitted by Mr. J. Mansell Jenkinson, A.R.I.B.A., and the directors of the Abbeydale Club have instructed his firm, Messrs. Chapman & Jenkinson of Norfolk-row, Sheffield, to carry out the work.

Warrington.



Design for a church and school for the Wesleyan Circuit. Cost between £5,000 and £6,000. Sending-in day, August 8. Further particulars from the Rev. H. Kirby, 2, Palmyra-square, Warrington. Block plan may be seen at *The Builder* offices.

Halifax.

The T.C. invites competitive plans for the lay-out of the Bull Green Site. Premium, £50.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Singapore College (Jan. 1, 1924; March 30). Greenwich Baths (Aug. 25; May 4). Hull Art Gallery (Nov. 5; May 4). Mint competition for plaques (Sept. 30; May 25). Birmingham Masonic Temple (Sept. 12; June 22). Hull Cenotaph (June 22). Colour scheme (Sept. 30; June 29). Glasgow Pavilion (June 22).

Bournemouth Pavilion Competition.

Second Premiated Design, by MR. H. V. ASHLEY and MR. WINTON NEWMAN, FF.R.I.B.A.

[The three premiated designs in this competition were given in our last issue.]

THE COMPETITION SYSTEM.

By HOWARD ROBERTSON.

The increase in the number and importance of public competitions, coupled with a marked revival of general interest in matters architectural, makes it desirable to examine once again with impartiality the system under which these competitions are assessed.

It is sometimes helpful, in the support of an argument, to cite concrete cases, and I may therefore refer to the case of the Manchester War Memorial Competition, mentioned in the last issue of this paper, and to the recent and important competition for the Bournemouth Pavilion, the designs for which you published last week. I select the Bournemouth case, not because the competition was less successful in its results than many others, but merely because the designs submitted for it are still fresh in our minds. The results of this competition, as evidenced by an examination of the premiated and other designs submitted, provide, in my opinion, a certain amount of justification of the arguments of those who have maintained, for some time past, that the system of judging important public competitions through the medium of a sole assessor requires modification. It should be clear that there is here no reflection on the person of the assessor, but rather a query as to the rightness of a system which throws on the shoulders of a single architect the onus of judging unaided the merits of nearly a hundred designs offering varied solutions to a complex problem.

This method of judgment appears to have definitely been considered as inadequate and undesirable in all architectural competitions other than those for buildings which are to be executed. The Rome Faculty in Architecture, for example, would probably not be content to see its great annual competition assessed by any one man, however eminent. A remarkable falling-off in the number of entrants would be the immediate result were such a course to be pursued. That the same thing does not happen in the case of public competitions is due to the fact that there is little choice for the many lesser-known members of a crowded profession between entering for these competitions or forgoing perhaps for ever the chance of executing any large work.

From the initial stages of the competition there is every advantage in an opportunity for an assessor to be able to consult with professional colleagues. No man is infallible, and even in the drawing up of the programme there may be points which the most conscientious assessor may overlook. The submission of the draft programme to a second and third opinion might assist in assuring a clarity which will save competitors a wasted effort, which, taken in the aggregate, often reaches an appalling total. In the Bournemouth competition, for instance, the conditions called for a hall suitable for "first-class operatic and dramatic performances," in addition to the building's primary function as a concert hall. This proviso naturally caused competitors to inquire whether a full stage with wings and the usual height over the proscenium arch for grids would be required. The "answers to questions" stated that this point was left to the competitors to decide, and the matter, therefore, became a question of guesswork as to whether or no such accommodation should be provided. None of the premiated designs showed anything much in the way of stage beyond that required for a concert performance, although it is generally admitted that first-class operatic or dramatic performance requires very substantial stage accommodation indeed. In fact, the tendency in modern theatre design is for the stage to develop in every way and assume very ample proportions.

With the non-provision of a proper stage disappeared the necessity for the usual minimum of dressing-room accommodation, and those competitors who very naturally considered that a hall, such as the programme described, required both, found their designs apparently ruled completely out of court. The result seems to show that the assessor seemed to be decided in his own mind. It is not, perhaps, unfair to ask why the competitors could not have been clearly instructed on this point at the outset. It is quite possible that, had a jury been employed, some one member of it might have pointed out the disadvantages of leaving competitors in the dark over such a vital part of the programme.

The opinions of architects are as varied as the character of the work which they individually produce. The strong tendencies in a given direction of any one man may influence his outlook and incline him towards a certain decision; another architect of equal eminence will hold diametrically opposite views; and his decision will be correspondingly varied. It is quite possible, for example, that three separate assessors of equal eminence may hold very different views as to the best shape for a concert hall, and vary their awards accordingly. But if these three assessors were to be together on the jury, and each submit his reasons to his colleague, there might be a chance of a fair examination of each type, and, at any rate, the argument would make each protagonist show that proof, not prejudice, lay at the back of his opinions. A proper balance of opinion in vexed questions may only be arrived at fairly by a vote which discloses a majority. To avoid placing undue responsibility, and to safeguard the competitors' interests, the assessor should not be allowed to follow his inclinations unaided and unchallenged.

There is another matter of which every follower of competitions is aware, and that is the tendency for competitors to make a study of the assessor's work, tendencies, and opinions, and serve up a design "to taste." Whether the chances of an award are increased thereby is a matter of opinion, but the temptation will always be present under the existing system, and the appointment of a jury would definitely eliminate it. No man can cater to the taste of three people at once, and the result would be that each competitor would do what *he* feels to be right. *The Builder's* comments on the Bournemouth competition in the last issue included an expression of wonder "why such a subject as this pleasure pavilion for Bournemouth does not evoke ideas of more lightness and gaiety in building expression, and why the designers do not forget town halls and temples and business premises." My belief is that the results of past competitions show that a certain heavy type of design, drawn in the "competition manner," is generally successful, and that the competitors were influenced by this fact as well as by the work of the assessor, so successful in precisely the type of work the imitation of which in a pavilion design gave rise to the complaint. This tendency to "cater" to an assessor is having an unwholesome effect on the standard of competition designs, and partially explains the fact that we see awards going to designs which one feels would have little chance of a premium in a judgment delivered by an American or French jury of architects. The chief reason for the retention of the system of the sole assessor seems to lie, not entirely in any whole-hearted objection to the jury system, but in the material difficulty of providing for the remuneration of the jury's members. It is argued that assessors are generally eminent architects, men whose time is extremely valuable, and whose services are deserving of high remuneration. It is often stated that an assessor's fee is sufficiently onerous for the organising body and yet is not really a "paying proposition" for the assessor. All this is true, but one feels tempted to remark that success and eminence carry with them corresponding duties and responsibilities. *Noblesse oblige.* The mere fact of their attainment should incline their fortunate possessor to offer his services for the good of the profession and accept, as do the French architects, a remuneration which is more nominal than lucrative, the payment of expenses, with perhaps a modest fee. Assessorships should be an honour less than a source of income—a perquisite received more or less in rotation by a comparatively restricted body of men.

If some men of eminence feel that such a sacrifice is beyond their means or powers, there are certainly others who would be willing to fill their places, and I feel assured that the formation of competent juries will not present an unsurmountable difficulty in a profession in which so many lesser-known men devote much of their time to purely gratuitous work for the advancement of architecture. A distinct advantage might also accrue through this call to a service more honorary than remunerative. I refer to the introduction of new blood, the contact of the older men with those having less experience but perhaps a fresher point of view. Many young men of ability are to-day entering the competition lists. It is seemly that the tendencies which they represent should be recognised by adequate representation amongst those who assess their work, for a system functioning well at the beginning may, if unduly prolonged, produce stagnation.

Architecture is the most difficult and complex of the arts. The leaders of the profession should spare no effort to make certain that judgment in matters architectural is administered in a fashion as irreproachable as human endeavour can make it. And no question of patronage, no obligation nor friendly courtesy, and, lastly, no pecuniary difficulties, should stand in the way of doing full justice to meritorious effort and providing the best possible means of ensuring its recognition. I believe that the moment has come for architects to ask themselves whether such effort is being made.

CORRESPONDENCE.

Rievaulx Abbey.

Sir,—In the process of excavation at Rievaulx Abbey a quantity of lead has been unearthed near the west end of the nave. It is probable that this came from the roof of the choir (built in 1250) and was melted down and made into ingots, weighing about seven cwts. each, with a view to removal at the time of the Dissolution in 1533.

It is known that the work of destruction went on very rapidly, and possibly the roof of the nave fell in and buried this lead before it could be got away.

By the generosity of Lord Feversham, acting through his guardians, a most interesting situation has now been created. This lead has been given to us at York Minster just as we are getting to work on the Five Sisters Window, and it will enable us to re-lead that priceless glass with lead of precisely the same date as the window itself.

W. Foxley Norris, *Dean of York.*

Small House Plans.

Sir,—While we have the misfortune to be unacquainted with the book on house planning quoted by Mr. W. J. H. Leverton, we think everyone will agree with the not very original axiom he quotes to the effect that the kitchen fire and sink should be convenient the one to the other.

The plans illustrated in your issue of June 29 were prepared with the idea of making them suitable for the large class of inhabitants who do all their cooking in a small working kitchen, with cooker, sink, larder, &c., close at hand, keeping the living-room for the use implied by its name. We know that there is another, but we think a smaller, class of occupant, especially in rural areas, preferring to use its main room as a kitchen, with a separate scullery, but the plans illustrated would be modified in detail if this class of tenant were under consideration. We suggest that this would present no difficulty, and we have certainly done it in some cases.

We are sorry Mr. Leverton thinks these plans are put forward as the last word on the subject. Our intention in preparing them was simply to ascertain what could be done within the new subsidy limits.

With regard to type "D," to which some exception is taken, this is merely a variation of a plan which must have been built in thousands. To us a larder 2 ft. 9 in. by 4 ft. 9 in. seems a necessity, and a back porch 3 ft. 9 in. by 6 ft. 9 in. a very desirable adjunct; but if Mr. Leverton, on consideration, still thinks this arrangement wasteful, we are sure that other readers beside ourselves will be extremely interested to see the plan taken a stage further.

Ewart G. Culpin and R. S. Bowers.

Slope for Corrugated Iron Roof.

Sir,—I should be grateful for practical information as regards the minimum slope or fall required for a corrugated iron roof (with side laps of one corrugation and horizontal laps of 6 in.) which will ensure a watertight result. Also the maximum spacing between purlins for 24 gauge corrugated sheeting without boarding or other support.

"A Reader."

[The minimum slope for the roof mentioned should be 22½ degrees, and the maximum spacing of purlins 5 ft. 6 in., allowing for the use of 6 ft. sheets with a 6 in. lap.—Ed.]

MANCHESTER WAR MEMORIAL.

Mr. Paul Waterhouse, P.P.R.I.B.A., has addressed the following letter to the Editor of the *Manchester Guardian*:—

"During my Presidency of the Royal Institute of British Architects, which terminated at the end of June, I became cognizant of the facts and opinions referred to in your issues of July 3 and 4. The allusions in your London letter of the latter date, while supporting, and, in fact, commending, the practice of our Institute in the matter of competitions, need a word of supplement. Our regulations are by no means merely (if at all) measures of protective 'trades-unionism.' They exist—as a moment's thought will show—in the general interests alike of promoters and of architects; alike of the public and of Art itself. They have won their way to acceptance along a sometimes uneasy road on which architects themselves were the chief sufferers. Their final and complete recognition is the secret of the interesting fact that to-day our British architectural competitions have the finest prestige in the world. Open competition, in this life of imperfections, is an imperfect way of choosing an architect; but it offers to the promoters of public schemes certain great advantages which will be lost if the present prestige is set back. I know a great deal more on the subject in general than discretion would permit me to say, and something more of this particular case than the courtesies of confidence would justify me in disclosing. I admit that to me it is a very great surprise that the reported deadlock should have arisen in Manchester, and I cannot believe that it represents the considered or permanent attitude of the City which has been so long the patroness of the arts, the friend of artists, and—may I add—the devotee of common sense."

Writing to the *Manchester Guardian* on the subject of the Manchester war memorial, Professor C. H. Reilly, F.R.I.B.A., says, in part:—

The difficulty which has arisen over the war memorial is a very real one. Like any other real difficulty, there is right on both sides. The Corporation will not bind itself to accept the assessor's award, and the architects will not compete unless it does.

At bottom the architect's difficulty amounts to a recognition of the fact that there is at present in England very little lay opinion on architecture which is reliable. The real prize in any architectural competition is the structure to be erected. The premiums are only consolation prizes. Every architect competes to win the chance of making the actual monument. Nothing else really matters. Where, therefore, laymen are to be the final judges of what is the real prize, in spite of the expert advice they have called in, the architect in the present state of affairs refuses to compete. He fears that the design he has brought forth will, even if placed first by the expert, be put aside to suit the unexplained fancy of the layman.

The laymen, in this case the Corporation, are providing the money, and feel that that gives them the right to call the tune. They are willing to be advised by an expert, but they want the determining word. However much they admire the expert and his own works, they feel he may be swayed by some idiosyncrasy which might in their view vitiate his choice. They can quite honestly feel like this, and feeling like it they do not want their hands tied.

What, then, is the remedy? The reported action of the Committee in seeking for a design by other means than a competition is no solution at all. Now that the public competition has been given up because the assessor's award was not to be final, any reputable architect directly approached to undertake the work would feel bound to refuse. The Committee therefore ought not to be able to find a good architect to do the work. They can then only fall back on a sculptor. But the design is an architect's job; the sculptor will, as a matter of fact, employ one as a ghost. In this case, however, the architect will have to remain a very thin ghost indeed, for there will be a double reason for his name not appearing. He is not likely, therefore, to be a very good architect, and there is not very much hope for a good monument, such as everyone wants, being brought about on the lines on which the Committee is at present working.

What, then, is the real remedy? I suggest it is to return to the competition idea, but to empanel a jury of three experts instead of a single assessor. I would couple this with a really handsome sum to be paid to the winner if his design is not carried out within twelve months. By paying such a fine the Corporation would be free of the competition, if need be, and could start again with a clean sheet. But I fancy that with a jury the need would not arise. A single assessor with the best will in the world cannot resolve his own personal equation. The particular assessor mentioned would have brought in as fine a field of competitors as any single assessor in the country. With a jury of three architects, however, more still would have come forward. I think England is the only country where the single assessor survives. In France and America the jury system is invariable. If we had it here three-quarters at least of the prejudice in the eyes of promoters against architectural competitions would be removed.

Rievaulx Abbey. (*See p.* 58.)

[North Face of South wall of Chancel after repair. The wall top is left irregular to harmonise with broken fragments in other parts of the ruin.]

HOUGHTON TOWERS, HOUGHTON CONQUEST, BEDFORDSHIRE.

PROFESSOR A. E. RICHARDSON'S letter published in last week's issue of *The Builder* provides yet another instance of the relentless sweep of the scythe of progress. With profound regret one learns of the threatened destruction of what remains of the historic mansion of Houghton Towers. It is inevitable that, with the march of time, the old order should make way for the new; but when, in passing, such names as John Thorpe, Inigo Jones, and Sir William Chambers are conjured up a tinge of sadness is felt at the apparent necessity of having to lose yet another valuable link with the past.

It would be satisfying to learn that steps have been taken to preserve these venerable ruins; or, at any rate, to ensure that as complete a record as possible be left of the place, by means of plans and photographs. Unfortunately, what now exists is in a ruined and dangerous condition; only the bare walls are standing; floors and roof have entirely disappeared, but enough is left to indicate the general disposition of the place, and so enable one to form some idea as to the richness of the detail and the manner of the decoration.

The present house is said to have been built between the years 1616–1621. Local tradition holds that Inigo Jones was responsible for the design—the squareness of the plan and the lack of internal areas certainly substantiates this view—but other authorities incline to the opinion that John Thorpe designed the main body of the house, Inigo Jones merely adding the loggias and south tower, and carrying out the decorations generally. Whoever the original author of the design was, however, there is abundant evidence to show that both Inigo Jones and Thorpe played a very considerable part in evolving the plan. The site is indeed a remarkable one. The house is situated on the brow of a hill, overlooking the Vale of Bedford, and commanding perhaps the finest view in the county.

It is not at all clear whether the principal entrance was on the north or south front. From the plan one would gather the entrance to have been on the north, especially as a broad avenue of oaks led up to the loggia on this side. The south elevation, on the other hand, possesses in the projecting porch a feature which also strongly suggests a principal entrance. If this were the case, however, the entry would be directly into the great hall, and would be quite cut off from the grand stairs.

The eastern wing, which has almost entirely disappeared, was, it may be assumed, given up to kitchen and servants' quarters. How far these were contained on the ground floor or in the basement it is difficult to say. The whole of the east wing possessed a basement, and in all probability the kitchen quarters were situated in it. The western front possesses a fine open loggia, the design of which is attributed to Inigo Jones. This loggia consists of superimposed orders of Doric, Ionic, and Corinthian, excellent in proportion and scholarly in detail.

The loggia to the north—also supposed to have been designed by Inigo Jones—is exceedingly interesting too, in that it affords one of the earliest examples of the use of rubbed brick in England. Generally the main walls are constructed in brick coursed with stone. Several internal walls are entirely of stone. As far as one can judge, the walls were plastered internally and jointed to resemble stone, with deep voussoirs over the openings, particularly in the staircase hall. There is no means of ascertaining what were the planning and arrangement of the upper floors.

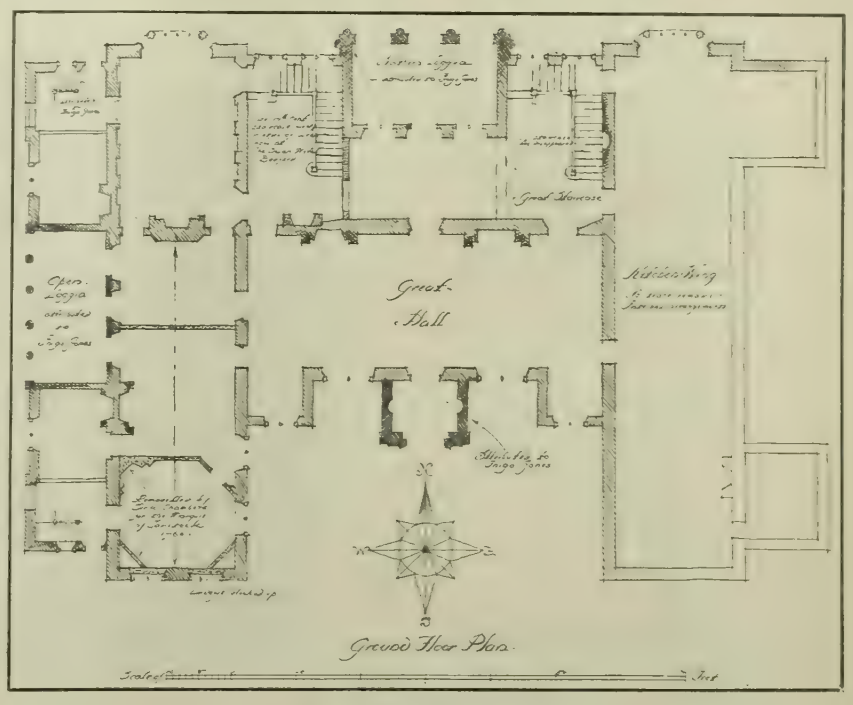
In 1738 this fine old mansion was bought by the Duke of Bedford, and after the year 1755 was renovated by Sir William Chambers for the Marquis of Tavistock. Traces of his work are quite apparent in several places, chiefly in the western wing. In 1794 the house was completely dismantled, all the internal fittings and furniture being distributed throughout the neighbourhood. In the Swan Hotel, Bedford, is to be found one of the staircases, a fine example in the style of Sir Christopher Wren, and supposed to have been designed by Henry Holland; while a house in Church-street, Ampthill, boasts another beautiful little oak staircase. Many other of the internal fittings are to be found in various parts of the county.

Though there is nothing now left but the shell, there is nevertheless a romantic charm about this old ruin which can awaken forgotten memories and call up the spirits of the past. In this utilitarian age such sentiments find scant favour. Let us cling to them, however, while we yet may, and strive to preserve where possible and practicable these fine old relics of days gone by.

The sketches (pp. 44, 45) show what remains of the south tower and the north loggia. The plan indicates what portions are attributed (conjecturally only) to John Thorpe, Inigo Jones, and Sir William Chambers.

STRAND-ON-THE-GREEN.

THE Royal Institute of British Architects informs us that, through its Art Standing Committee, it made inquiries of the local authority as soon as it obtained knowledge of the intention to build a new wall and make other changes affecting the amenities of Strand-on-the-Green, Chiswick. The Institute wrote several times officially to the Chiswick Urban District Council offering its advice, with a view to the contemplated works being carried out in the way least calculated to spoil a very charming portion of the Thames side, but it was only after long delay that the Chiswick Council expressed its willingness for representatives of the Institute to meet its members and officials to discuss the question.



Members of the R.I.B.A. Art Standing Committee accordingly attended a meeting at the site, and discovered that the whole of the foundation of the new section of walling at present being dealt with was actually in position, and a fairly long stretch of concrete walling almost completed, faced with rubble walling of a most mechanically uninteresting kind entirely out of harmony with its surroundings. The Institute's representatives pressed that the exposed portion of the wall still to be completed should be faced with old bricks of the character shown in portions of the existing adjacent river walling and in the houses lining that part of the river, and finished with a thin plain stone coping, also of the character of the work in the vicinity. It was understood from the Surveyor to the Council that they had a quantity of suitable old bricks in store that could be used, and after discussion the Chairman of the Council and other members attending agreed that this change in treatment of the wall should be arranged.

About three weeks later a letter was sent by the Clerk of the Chiswick Council to the Secretary of the Institute stating that they felt a difficulty in making this adjustment of their contract, and that they were accordingly proceeding on the lines originally arranged. The Institute is unable to understand the difficulty to which the Clerk of the Council refers, as variations of this sort in a contract are usually easy of adjustment, and it would appear that in this case the change suggested and agreed upon might even have effected a saving in the cost of the work.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The following note is from the minutes of the last meeting of the Council of the Royal Institute of British Architects:—

THE NATIONAL GAS EXHIBITION, 1923.—The Council accepted an invitation from the Executive Committee of the National Gas Exhibition, 1923, to allow the Royal Institute to appear as a patron of the Exhibition. They also authorised the inclusion of the name of the President of the Royal Institute in the list of Vice-Presidents of the Exhibition.

Plan of Houghton Towers.

By MR. E. B. MUSMAN, A.R.I.B.A.

DEVON AND EXETER ARCHITECTURAL SOCIETY.

PRESIDENT'S ADDRESS AT THE ANNUAL MEETING.

In the course of his Presidential address at the annual meeting of the Devon and Exeter Architectural Society (reported in our last issue), Mr. Percy Morris, F.R.I.B.A. (Exeter), said :—

There was undoubtedly in some quarters a quickening interest in architecture, as distinct from its archæological aspect or the mere romance of association. This was marked, among other signs, by greater discrimination in the Press and by better informed criticism ; but even more interesting to the observer was the accumulating evidence that it was not an economic proposition to consider a building solely from the utilitarian standpoint, which was the prevalent attitude. The Americans had discovered this, and an increasing number of buildings erected in this country showed that it was becoming recognised here.

There was no doubt that environment—and by environment he meant not only the setting of a building, but form, colour, repose, and fitness—exercised psychologically far more influence than was generally admitted. If this were true of the busy mart and factory, it should be possible to prove beneficial in such buildings as schools and hospitals, and, as a corollary, financial gain, which remained the only potent argument. The striking work of the Industrial Research Committee with regard to fatigue and kindred subjects added confirmation to his conjecture. Nothing was farther from his thoughts than the suggestion of lavish expenditure or ostentation ; all he meant was the humanising touch.

The most marked features of the times were the general flux of old ideas working in the grooves worn by controversy, and the impetus given by recent events to many branches of their work. Among these were the revolution in the system of training architects, due to the educational facilities offered by the Universities and the Architectural Schools ; the rapid development of town and regional planning ; the change of attitude towards the care of ancient buildings, of which the work at Westminster Hall and Tintern Abbey were fine examples of scientific deduction ; and the saving of the Whitgift Hospital, a testimony of public interest ; the reduction to formulæ of the principles of acoustics as applied to buildings, in which the Americans again led the way ; the theory of ventilation turned inside out ; and a change of ideas on the important aspect of sanitation.

The housing problem still awaited solution, but he could only speak of it as an onlooker ; being the blushing exception to the rule that every man now carried an infallible remedy in each pocket. They were apt to regard it as a question particularly affecting this country, losing sight of the fact that the need for houses was world-wide. Nor was the problem the product of our own age, although the recognition of it may not have affected the Civic conscience of past ages with that insistence which now demanded action.

One aspect was apt to be overlooked. He referred to those vast slum areas awaiting clearance and to the fact that many rural cottages were unfit for habitation. In the case of machinery it was recognised that its useful life was for a specified term of years, and foresight prompted the allocation of a sinking fund for renewal. Sooner or later we should have to realise that, regarded as an investment, there was a term beyond which no building could be expected to yield a profitable return. It was an anomaly which allowed the continued use of houses which were a menace to health and forbade the sale of diseased animals for food. But although from the ethical side the arguments could be made unanswerable, they were qualified not only by economic and industrial conditions which could not be adjusted rapidly but by the pressing need of accommodation, and there was the real danger that mistimed action might do disservice by fostering reaction.

He thought it was Lecky who observed that " opinion depends less on the force of its arguments than on the predisposition of society," and common sense told them that more progress would be made in the long run by timely palliatives than by ineffective remedies. Nevertheless, it was the time for a constructive policy, so that at the back of these palliatives there might be considered measures which by sustained effort spread over a term of years (and it must be lengthy) would focus upon the ultimate object in view, and that object was to ensure a stable foundation for the superstructure of posterity.

One could not close without reference to the gathering recently assembled in London to do honour to the memory of that illustrious architect and scholarly gentleman, Sir Christopher Wren. His reputation not only survived undimmed, but the passage of two centuries had added lustre to his fame. In serene dignity Wren stood out as one of those vivid contrasts in an age of corruption and flippancy. A man of many parts, he was singularly gifted by nature and equipped by education for that unique opportunity which came to him at the age of 34. As astronomer, mathematician, Latinist, scientist, logician, mechanician, he had already risen to eminence and would inevitably have stamped his mark on any age. But they must not think of him as coming fully equipped to the task—he brought the trained mental gifts, but as an architect his reputation rested on potentiality rather than achievement.

If they excepted the work of Inigo Jones and his colleague, John Webb, Wren had no great English tradition to draw upon. He never set foot in Rome, the Mecca of all architects of the Italian Renaissance from Brunelleschi to Wren's contemporary, Bernini, whom he met during his visit to Paris. His career, therefore, made a special appeal to architects, because they could trace in his work the evolution of the master mind solving each problem in a manner not only logical but entirely his own. It was that phase of his work which would stiffen resistance to any proposals which would weaken that wonderful chain of evidence from which already too many links had disappeared.

We need not enter into discussion as to whether this or that building was designed by Wren. His authenticated works were more than sufficient to impress them with the stupendous magnitude of his task and the consummate skill with which it was accomplished. St. Peter's was 100 years in the building and was the work of six architects. St. Paul's was completed in 35 years under one architect and one master mason.

At times like the present, when they in their humbler spheres followed the path paved with material considerations and hedged sometimes by inconsistencies, it was in the lives of men such as Wren that they might find inspiration and incentive to fresh effort. For, in the words of John Ruskin, " Of all the pulpits from which the human voice ever spoke, there was none that carried farther than from the grave."

LONDON IN THE PAST.*

This little book is written in the form of annotations on walks round the Cities of London and Westminster, with a digression to view the Tower of London. It gives a brief account of the main objects of interest, of the origins of names, and of their historical and literary associations, but sketch maps illustrating the journeys would have been welcome. The work is a little over-ambitious in claiming, on the cover, that it represents an endeavour " to include everything of importance from an historical, architectural, or antiquarian standpoint." It is not easy to exhaust the Temple Church in 22 lines, Westminster Hall in 17, or the Houses of Parliament in 26 lines, and one looks in vain for any reference to Shepherd's Market, the Savile Club, or the Jewel Tower in Palace Yard, but in 170 short pages it is manifestly impossible to touch more than the fringe of the subject. In stating on page 167 that Sir Christopher Wren died in a house in St. James's-street the author does not forestall criticism by giving us his grounds for disputing the usually accepted place of Wren's death—Hampton Court ; while Inigo Jones is not mentioned in connection with the York Water Gate.

THE TRUTH ABOUT MURAL PAINTING.

By JAMES GUTHRIE.

The subject of mural painting remains for all who are interested in beautiful buildings a fascinating if puzzling one, and the recent ebullience of opinion in a contemporary must have left a good many with the impression that, whatever might be true about the state of this art, none of the writers could suggest a use for it. With the critics' views upon the deplorable plentifulness of talent we have frankly no patience; for when there is so little left in criticism as to set the most vital arts in obscurity and doubt we know that it suffers the same contagion which prevents the school instructor from seeing any hope for trained ability in mural painting except through patronage or State aid.

Although something has unquestionably been done by patronage in the past, it affords no secure or certain foothold for the arts to-day, and not only is that the case, but there have always been objections to it which have acted to the detriment of the naturally democratic spirit of art. We may not forget, even when contemplating the work of the great masters, how this nobility of vision and treatment makes its demand first upon the artist, and only afterwards upon the patron, whether prince or Pope. And our study when directed towards the resources of such a vocation, in the hope of finding a new independence and a plausible sort of employment, should not be diverted by illogical and unsound ideas, or whatever grounds are discovered will merely be those upon which no general healthy progress can be made.

A further contribution to the subject was that of one who had helped to organise the decoration of some walls as a means of providing relief work during the war. While the suggestion came nearer being practical because it stood more firmly upon an actual undertaking, there still clung about it the atmosphere of help and of official sanction which invariably acts oppressively, and cannot be regarded as anything but a somewhat desperate palliative. With all due allowance for the admirable work done by way of aiding those who were driven to seek help at that time, the employment of artists within their own province did not form the large part of that benevolent activity. On the contrary, we might draw the conclusion from unfavourable conditions at any time that the tendency is to look for every sort of cure except the one which permits an artist the exercise of his own particular expression.

This same problem exists now in a hardly less acute form than before. We had no remedy in 1913 which can be applied now, or the unusual interest created in mural painting by the demand for memorials would have carried it into active operation and rendered these complaints and suggestions unnecessary.

The claims of the mural painter are obviously good in theory, however unequal his practice may be. If he should be led to accept and fall in with schemes of employment which are of the nature of a charity, he merely postpones the practical organisation of his craft and launches himself upon a discouraging and fruitless uncertainty, leaving his fate in the hands of those who have a radically mistaken idea of how the art can be brought into common use and the artist given control of what is his own.

Either there is or is not a distinct and definite good got by the individual and the community from this ancient and beautiful art. No good can be got from it without some response, perhaps; but the response to any given thing is not induced by its privacy and unfamiliarity. Hidden away in the studios and schools and shows are many pleasant and exciting schemes which find no general application, mainly because the spirit of open adventure on the part of artists is wanting. They have not realised that they exist in a place apart, and that they have never created the necessary machinery by which their work might be pushed into direct contact with the people without being attached to the big shop, the industrial exhibition, or the rich unlikely patron, who all represent conceptions of art more or less antagonistic to progress on natural lines.

Something of what this antagonism is has been slowly borne in upon art workers of all kinds within the last few years. It has taken a clear shape, and has, by implication, shown what little remains if the arts are dependent upon the relationship of design to industrialism when they have no volition of their own for the proper adjustment of that relationship.

The action of the Society of Arts in putting forward industrial design should, but I think does not, coincide with action on the part of any purely artistic body. Its operation appears to be in conjunction with the schools, which, in the absence of any other authority, undertake more and more the direction of employment, an enterprise which has several serious objections for those who are grown beyond the jurisdiction of art masters and professors. But I say this less because of possible abuses than from a firm belief that the matter in question is too serious and far-reaching to be handled indirectly in such a way by these men.

These arrangements all suffer from the same defect. They are substitutes for something better, and perhaps would not exist were it not for the lack of a wholesome grasp of the whole subject by those who profess or are in a position to lead and guide. But by means of such substitution the natural claims of design in every department are disposed and put forth by those whose knowledge and experience are not primarily artistic, those who prefer the pliability of the student to any greater competence or resistance.

Mural painting might well be the subject of experiment on actual walls and for particular purposes. Art masters press the students of their systems upon public buildings, but are not noteworthy on the whole for enthusiasm where their own school walls are concerned, which is not a good sign. The larger schools have enormous bare areas of wall space, halls and staircases and ceilings that cry aloud to be used. The expansion possible for the student in his own home and the homes of his friends is almost entirely neglected. While he might be making his art familiar, bearing down opposition both for himself and for others, he is pursuing his study in a perfectly artificial way, waiting for the patron to come and lift him straightway into fame and fortune. That is to say, the average art student who learns how mural painting should be done is in the condition of a man who closes all the doors between himself and the ordinary and proper practice of his work, and supplicates unknown and probably non-existent men for a share in the great opportunities which he himself will be the first to admit were beyond his capacity.

Everywhere it is the same. The studio is full of interesting sketches for "proposed" decorations. The school studies give the illusion of unbounded talent. Drawing becomes like an acquired taste, something for learned curators to attest and rank with the great, to the confusion of any but the stoutest character and gifts. Art, like a mushroom, responds to the intensive heat of modern training; but it needs more manful trial than by these theoretic unpractical methods, or it will knock at the door and still be refused admission, and will not have gained any access to the people even by being installed in galleries and praised in newspapers. The painter, a workman, keenly aware that he has a gift of beauty to confer, ready at all times to demonstrate it with form and colour and a sense of fitness, has already passed through most of the barriers. His genius, should his talent be so great, will suffer no loss by rich expression. His material will spring up around him, more often in some hint picked up in a half-built house or under stress of the artistic poverty displayed in the arrangements of the walls of art exhibitions. A copy of *The Builder* will suggest more to a workmanlike mind than a shelf of art journals. There are asbestos sheets and patent boards which would have been welcomed by the great painters of the past. Smaller wall sections can be designed partly in the workshop and completed *in situ*. Improved colours, ready methods, lurk everywhere to attract beauty and draw it into daily service. It need not be any more true than we like that beauty is ushered in with an apology, nor do questions of expense set up so formidable a barrier as indefinitely to put off the invasion of colour into church and hall and home.

Builders and architects still remain more aloof from this matter than they might be. Perhaps they argue that there is nothing to go upon; but the fact remains that a great deal of decoration is done, and is done largely by those who have no special aptitude, in ready-made styles and poor colour. The adventurous house-painter here and there is sporting in his recognition of the modern touch; he is unfamiliar, however, with the artistic resources of his material, and, till he undergoes explicit training, can never be more, though as an ally he could scarcely be improved upon.

Another of the drawbacks under which the mural painter labours is his fancy for permanence. No doubt lasting work is desirable when it is worth keeping—but we have to recall the plain fact that most of what is put upon walls and canvases is not worth keeping, and that, if the test for our walls is to be their capacity to remain for a thousand years, then indeed we are going in beyond our depth—or rather refraining because of a mistaken standard of worth. Permanence of material no artist is likely to neglect: that is a different thing. The disaster which we have to consider is the complete stoppage of practice because he ranges himself alongside Michelangelo and Tintoretto, makes a fetish of Cennino Cennini, and, as a result, has no walls to paint. This is putting the cart before the horse: for if we reverse the order of things, and decide that it is worth while decorating dining-rooms, staircases, and halls, and altering and improving schemes planned to last for a few years, we arrive at something more advantageous in every respect. Permanence of colour is only one factor. It might conceivably be the least important, because faded colour can be made good where a bad design cannot. The problem of what shall be acceptable to live with is barely touched, and, in fact, cannot be decided at all in schools of art. Mural painting is essentially intimate and local; it is the father and mother of other sorts of painting. A room, however small, whatever its use, is awakened into life by colour and given a character which is otherwise lacking. Green and gold may give place to blue and rose next year, or in five or ten years' time. Nobody wishes to live, or even meet, in a place which jostles the eye with Cockney versions of old legends, or with things done to please academic taste. The picture may only be the rallying-point of a simple scheme, the one small space in which the artist has leave to enjoy himself. But it is this capacity to sustain a task which lies near his hand, to serve an ordinary purpose, that matters more than any misguided ambition. This will open the door, will decide the terms, and free the artist from a thousand useless go-betweens, which, as has been seen, come with no faith and no practical ideas.

Architects' Cricket Match.

The Architectural Association have challenged the R.I.B.A. to a cricket match, to be played at Elstree on July 18. In order that a representative team may be secured the Secretary R.I.B.A. will be glad if Members and Licentiates who are regular players will kindly send their names to him as soon as possible.

State Hospital and School of Medicine, Cairo

The authors of the design placed first in the Qasr-el-Aini Hospital and School of Medicine, Cairo, Competition are Messrs. C. Nicholas and J. E. Dixon-Spain, FF.R.I.B.A.

The ward blocks are sited on the west bound ary next to the river and linked up by a main covered way, which latter forms the general communication between all departments of the Institution. The main covered way is terminated at its north extremity by the sisters' and nurses' and probationers' homes, and at its southern by the laundry and power station. It picks up about the centre of its length the services from the central kitchens, central pharmacy, operation block, central clinic, administration offices, clinical instruction, medical school and the inflow from out-patients' division.

Immediately north of the administration block the hospital is effectively divided into male and female divisions by the range of buildings which form a natural sequence from the out-patients' entrances via the reception and baths blocks to the inlets into the main covered way. South of the administration block, and balancing the out-patients' building, is the medical school.

The central entrance, facing the Mahomed Ali Bridge, leads by an avenue-approach direct to the administration block, and flanking it are the entrances to the medical school on the south and the out patients' divisions on the north. The last is off the main road and diverts the large flow of patients from the thoroughfare. The outpatients' division, perhaps, presented the outstanding problem in planning owing to the required rigid separation of the sexes. Over the outpatients' block is the dental school and clinic and radiology department, and at the east end the anthelmintic shelters.

The infant welfare block and extern are arranged within the "Hareem" division and for access from outside. The mosque follows the earlier type of plan and consists of open colonnaded liwâns.

Another drawing of Messrs. Nicholas & Dixon-Spain's scheme, and other designs submitted in this competition, were given in our previous issues.

Addington Park, Surrey.

This house, which has just been finished, is situated in the park of Addington Palace, near Croydon, on a southern slope. It is built in brick, with cement-rendered external walls, and a roof of old slates with swept valleys and a tile ridge. All windows on the south front are sashes and cased frames, and have been made as large as possible to obtain a maximum of light.

The general contractors are Messrs. Prestige & Co., of Grosvenor-road, S.W., and the slating to the roofs was supplied and fixed by Messrs. Ames & Finnis, of 37, Strand, W.C.

Mr. E. Guy Dawber, F.R.I.B.A., is the architect, and the illustration is for the exhibit at this year's Royal Academy Exhibition.

Stowell Hill, Somerset.

This house, which is now nearing completion, occupies a commanding position overlooking the Blackmore Vale, and is executed in local stone from Cheriton, with a roof of old red handmade tiles. The windows are of wood, and the worked stone for the entrance doors is Doulting.

The general contractor is Mr. R. G. Spiller, of Sherborne; the heating and domestic hot, water work is being executed by Messrs. Dent & Hellyer, of London; the electric lighting and plant is by Messrs. Waring, Withers & Chadwick, of London; and the roof tiling was supplied and fixed by Messrs. Ames & Finnis, of London.

The architect is Mr. Guy Dawber, F.R.I.B.A., Our illustration is from the exhibit in this year's Royal Academy Exhibition.

Bournemouth Pavilion Competition.

We give this week the elevational and sectional drawings submitted in the Bournemouth Pavilion Competition by Mr. Wyville Home, A.R.I.B.A., and Mr. Shirley Knight, F.R.I.B.A., who were awarded the first premium, and the perspective submitted by Mr. H. V. Ashley, F.R.I.B.A., and Mr. Winton Newman, F.R.I.B.A. Other drawings in the first, second, and third premiated designs were illustrated in our last issue.

Swansea War Memorial.

This memorial (illustrated on p. 57) has been erected on the Promenade at Swansea between Mumbles road and the sea. The cenotaph is 30 ft. high, on a base of wide steps rising in centre of a Court of Memory, sunk 2 ft. below the general ground surface in form of irregular octagon 60 ft. by 40 ft., inside enclosed by walls 6 ft. high, on which bronze plates bearing names of the fallen are fixed. A seat is formed on all the walls in the court. The cenotaph is of Whitbed Portland stone with core of brickwork, 11 ft. 3 in. by 6 ft. at base, tapering to 9 ft. 9 in. by 4 ft. 6 in. at cap, with base of three Forest of Dean steps projecting 6 ft. on each side. The walls and pillars of the court are also of Portland stone with local Pennant stone externally, and steps and seat of Forest of Dean stone. The floor is paved with rustic local stone. Fixed to the walls of the Court of Memory are one small and 10 large bronze plates, containing the names of Swansea's fallen, and another plate records the inception of the Memorial Scheme. The foundation of the cenotaph is of reinforced concrete 23 ft. by 18 ft., and extends 5 ft. below the floor of the Court. The name plates have recorded 2,274 names.

The architect is Mr. Ernest E. Morgan, A.R.I.B.A., Borough Architect.

The builders were Messrs. Griffith Davies & Co., of Swansea. The Portland and Forest of Dean stone was supplied by the United Stone Firms, Ltd. (Bath and Portland). The bronze work was supplied by Messr. James Gibbons, Ltd., Wolverhampton. The memorial is to be unveiled by Admiral Sir C. Doveton Sturdee on July 21.

The National Bank Building, Liverpool.

We regret that in our last issue the cast-iron window frames, staircase balustrades, and balcony installed at the National Bank building, Liverpool, were attributed to the wrong firm. This work was carried out by Messrs. Walter Macfarlane & Co., the well-known architectural, sanitary and engineering art founders, of Saracen Foundry, Possilpark, Glasgow, who specialise in this class of work.

MANCHESTER COLLEGE OF TECHNOLOGY.

AN interesting event took place in the evening of July 5 at the vocational training school in Whitworth-street, Manchester, when the Coming of Age of the Institution was celebrated. Those of us who, in our younger days, read with great sympathy the works of John Ruskin and visualised his ideals of complete and sensitive preparation of the rising generations for their serious work in life, found the practical side of those ideas brought very nearly to perfection in the almost bewildering range of subjects dealt with by the College of Technology.

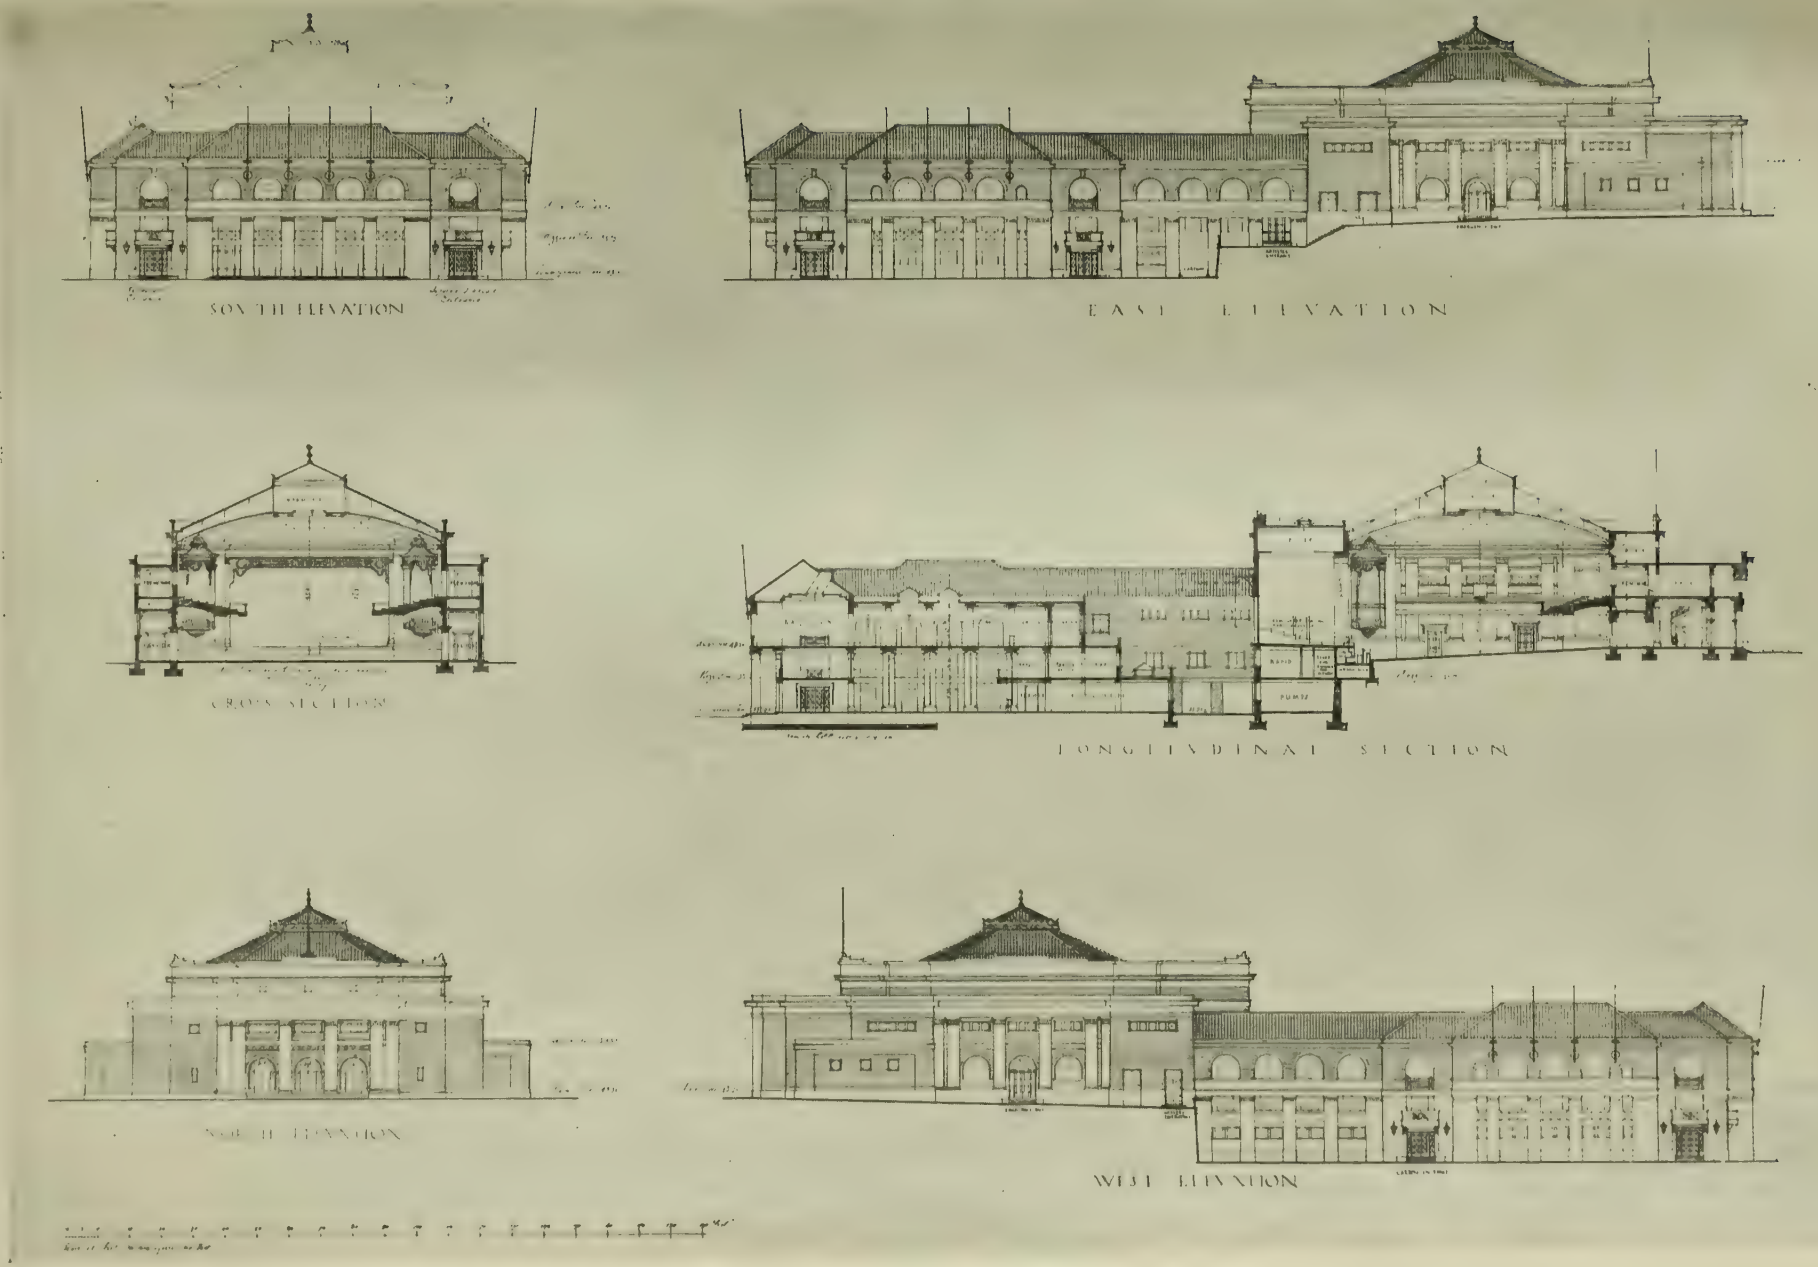
Lord Burnham, in his interesting speeches at the luncheon and in the evening, touched vital truth in his references to the value of technical education to the country apart from the golden opportunity it gave for individual talent to manifest itself.

In going through the various departments, each one of which seemed to us to be surprisingly complete, one was struck with the strong sense of the practical which imbues those who are responsible, while in that side of the school which affects more directly the readers of this Journal the æsthetic sense was in no case forgotten. In the room set aside for water supply and sewage disposal, for instance, there are actual installations of rams, air lifts, sectional models of meters, &c., which give the student a real working knowledge which many of us of an older generation could only collect by actual experience often painfully obtained. We met many students, and had most interesting conversations with them about their studies, and in every instance they showed an informed and intelligent grasp of their subject far beyond men of their age twenty years ago, which we venture to say is definite proof of the value of the work done; and probably it could easily be shown that the country gains rather than loses from the view of economy by the increased value to the country of its young and vigorous men, however much, within reason, it spends on their training. We found that those responsible were keenly alive to the value of research, and this in itself will add freshness to the work of the men when they go out into the world. We saw some most interesting examples of this in the room showing building materials; some tinted concrete blocks made under the directions of Mr. Morrey, A.R.I.B.A., for instance, and we were glad to see that colour in brickwork, apart from the interminable plastic brick and brilliant terra-cotta which has in the past been almost the only effort of colour in this part of the world, was fully appreciated. Interesting examples of rustic and other walls tastefully and suitably pointed were displayed.

Sanitary engineering, testing materials, &c., all were touched; while the wide range of knowledge required in this great cotton centre was fully covered. Properly to treat of the engineering departments, chemical laboratories, photographic and colour printing rooms and other subjects covered would take up a small volume. We think the Principal and all concerned deserve the greatest credit for their valuable and discerning work.

MEETINGS.

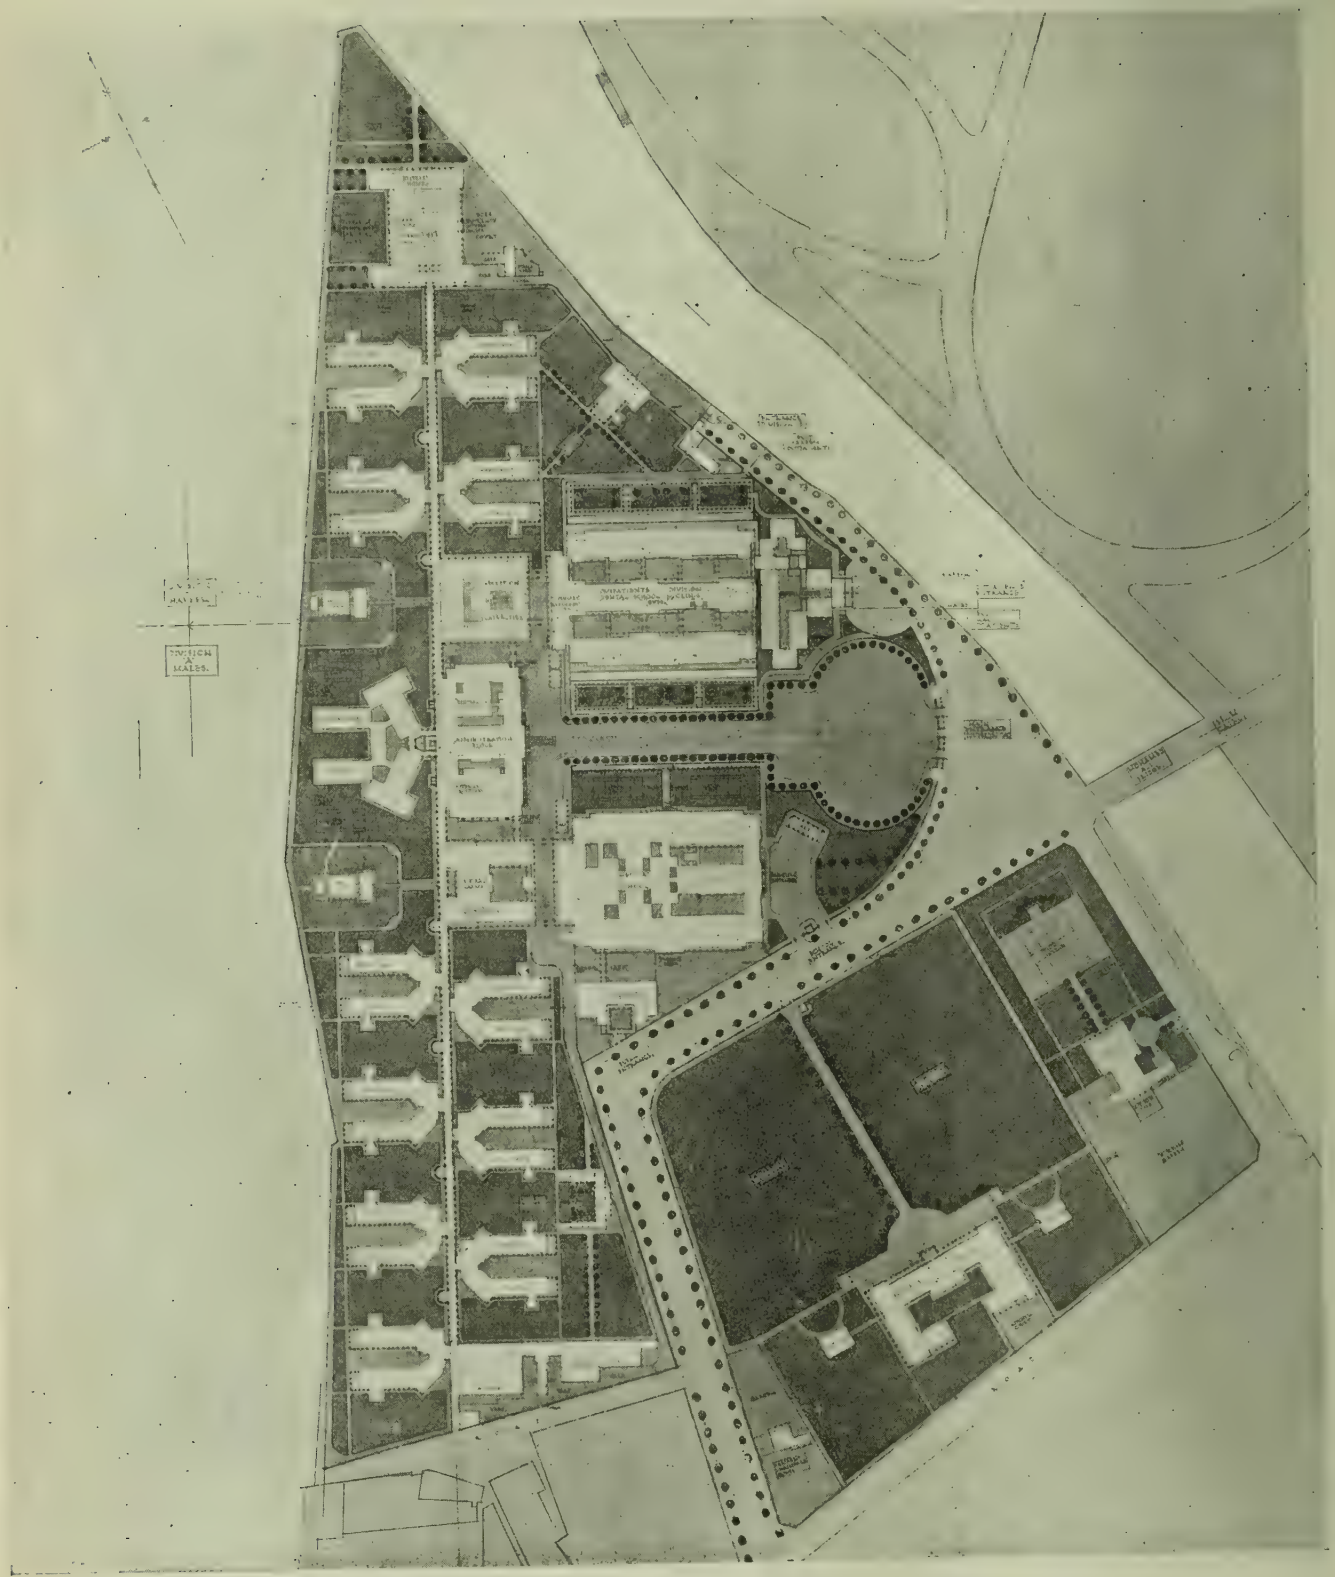
FRIDAY, *July* 13.



Institution of Municipal and County Engineers.—Metropolitan District meeting. At Horsham.

SATURDAY, *July* 14.

London Society.—Riverside Trip to Becontree L.C.C. Housing Estate.



An Architect's Estate.

Sir Alpheus Cleophas Morton, of Gauden-road, Clapham, S.W., and of 124, Chancery-lane, E.C., architect and surveyor, Liberal M.P. for Peterborough, 1889–1895, and for Sutherlandshire, 1906–1918, son of Mr. Francis Morton, of Old Sodbury, Gloucester, left £25,890 (gross).

RIEVAULX ABBEY RUINS.

SOME DETAILS OF MASONRY REPAIR.

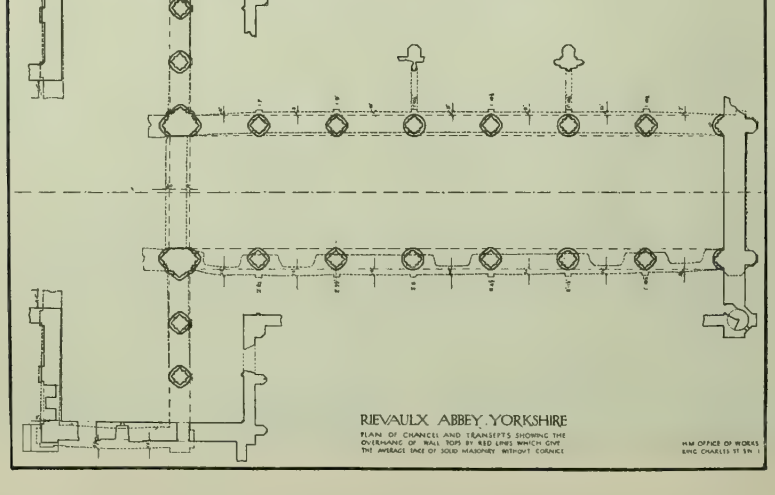
By WILLIAM HARVEY.

PRIOR to the winter and early spring of 1918, when H.M. Office of Works surveyed the ruins of Rievaulx Abbey, then recently delivered to the care of the Historic Buildings Branch, certain repairs had been performed from time to time under the advice of private architects, but the problem of conservation had never been faced in its entirety.

New defects of a serious nature were developing in different parts of the ruins, which demonstrated the lack of success of patchings and piecings against the decay inaugurated by Henry VIII and continued since his time by gravitation, wind and weather, and the depredations of villagers who had formerly used the old buildings as a quarry.

The most obvious and alarming defect in the remaining mass of the Abbey Church was a fissure extending upwards from the capital of the south-west pier of the chancel (Fig. 1), and communicating with a series of cracks in the masonry affecting every part of its height to the summit of the wall, 62 ft. above ground. Some of the cracks were of long standing, while the clean appearance of others indicated their recent development. The continuance of movement was confirmed by the state of the stone work at the arches and cills of the clerestory windows and at the wall top, where Portland cement pointing, applied at some comparatively recent repair, no longer filled the joints it had been inserted to cover. The newly-opened spaces measured on the average rather more than an inch across between the pointing and the stone to which it had been applied.

The wall head, at this point, was shattered and its masonry so loosened and wrenched apart as to make it impossible for members of the repairing party to venture to walk or even to crawl across. Illustration No. 1 shows the lower part of this series of fissures from the capital of the pier to the string course at the level of the clerestory passage, and indicates how obviously the masonry stood in need of thorough and comprehensive treatment. Exactly what form the repairs would take was a problem that needed serious consideration. The state of the former repair at the wall top showed that pointing the cracks in Portland cement would be no remedy. Movements were going on which affected a considerable area of the masonry facing; it became necessary to enquire whether these movements could be checked by the mere process of securing the individual stones to their backing of rubble core or whether the visible defects were symptoms of others not yet ascertained in the wall as a whole. Immediate shoring was put in hand, but the permanent work of repair—which could not be undertaken while the war lasted—was deferred in any case until a systematic survey had revealed the connection of the local defect at this particular pier with the state of the remaining ruin considered as a single entity.



The surveying staff and the clerk of the works in charge of the shoring operations worked together to glean from the building itself the best method of consolidating the masonry so as to conform to the principle of the Historical Monuments Branch and conserve the old with the least possible intrusion of new work.

Fig. 2, reproduced from a photograph taken in October, 1922, and showing the state of the masonry at the completion of the works, indicates the extraordinary success which has, in fact, attended the application of this principle. On comparison with Fig. 1, it will be seen that, not only have the old stones been retained, but that even the evidences of the historic defects in the structure have been preserved, together with the harmonies belonging to the colour and texture of the building.

The efforts of the Historic Buildings Branch have been consciously directed towards obtaining this result, and it should be of interest to trace the several steps taken in transforming the alarming state of affairs depicted in Fig. 1 into the very satisfactory conclusion shown in Fig. 2.

The preliminary shoring and the survey were undertaken simultaneously, the temporary timber staging being devised on the spot and constructed hurriedly and under great difficulties, due to lack of men and material, out of timber salvaged from the explosion at Morecambe munitions factory, together with a few sound baulks for principal supports. Under the conditions of war emergency only a small gang of elderly men and a limited supply of tackle were available, and the raising of each heavy shore demanded an exhausting struggle. The drawing reproduced in No. 1 was the direct outcome of these conditions. Facilities for the survey were confined at first to the scaffold erected about the damaged masonry, and as all hands were required at this spot the drawing was made piecemeal from different stages of the scaffold in the intervals of selecting timber for the different parts of the shoring from the small stock available, and giving necessary assistance in hauling it into position.

The intention in drawing at all under these impossible conditions was to obtain a clear insight into the nature of the defects, and to concentrate attention upon their possible meaning. It was only when some time had been spent that the idea presented itself of finishing the diagram as a record of fact. The nearness of the view point was dictated by the limited space on the scaffold, which was far too small to allow of obedience to the usual rule to exclude from the picture everything that is not included in a cone whose apex angle is 60 deg. On the completion of the survey, the plan showing the position of wall-tops in conjunction with the bases (Fig. 4), gave a strong hint as to the cause of the continued movements and fractures in the masonry.

The wall top was found to have stretched to East and West longitudinally, and to have bowed out to the South to such a degree that it overhangs 30 inches beyond the extreme edge of the pier. In the light of the survey plan the failure of superficial pointing to cure the defects was no longer a mystery. The wall was clearly seen to be slowly wrenching itself free to fall under the impulse of its own weight eccentrically applied to the piers below. The repair of the damaged masonry resolved itself therefore into a portion of the much greater problem of retaining the wall itself in position. Work on the fractured masonry was necessarily postponed until the whole position could be reviewed; and after minute measurements had been taken and calculations made it was determined to bind the wall from end to end and anchor it to the masonry masses at the central tower and at the East end of the building with two reinforced concrete beams hidden respectively in the wall top and in the floor of the clerestory passage. Until these works were completed the fractured masonry was allowed to remain supported upon its shores with the arches of the triforium wedged up on timber centres.

Not only were the reinforcing bands put in, but the whole of the upper part of the wall was consolidated by the washing out of all defective joints and the grouting and tamping in of cement mortar to obtain the utmost strength compatible with the retention of the ancient character of the ruin. It is worthy of remark that where the old lime and sand joints were sound they were left intact. A report of the clerk of the works, dated May 26, 1921, contains the entry, "approx. 15 per cent. of the old mortar joints have been left untouched, these are in good condition." The report for June 23 mentions that at the level of the clerestory window arches "25 per cent. of the old joints in ashlar have been left." The new cement joints were pointed with a composition of washed sea gravel two-and-a-half parts to one part of Arden lime, the surface being sprayed with water while the lime was setting to cause the larger pebbles to project in harmony with the old weathered work adjoining. For exposed wall tops one part Portland cement mixed with P.A. waterproof compound was substituted for the lime, but the surface treatment was applied in both cases, and the horrible appearance of slick cement torching on the surface avoided. The discharge of rain water was provided for by large lead spouts of simple form projecting 2 ft. from the face of the wall and stiffened by being attached to 1¼ in. by ¼ in Delta metal bars.

By these measures it was hoped to avoid any considerable movement in the wall when the repair of the fractured masonry was put in hand. At the same time it was foreseen that however carefully this part of the work might be treated the operations would involve very considerable risk of a slip and danger to the masons, and if the adjoining parts of the wall remained still unsound these difficulties would render the proposal to repair without the addition of permanent external buttresses so hazardous as to be impracticable.

By August 18, 1921, the process of consolidation had progressed downward from the wall tops to the neighbourhood of the fractured masonry.

The report for the fortnight ending on this date contains several references to the proposed work, and one which indicates the bad state of

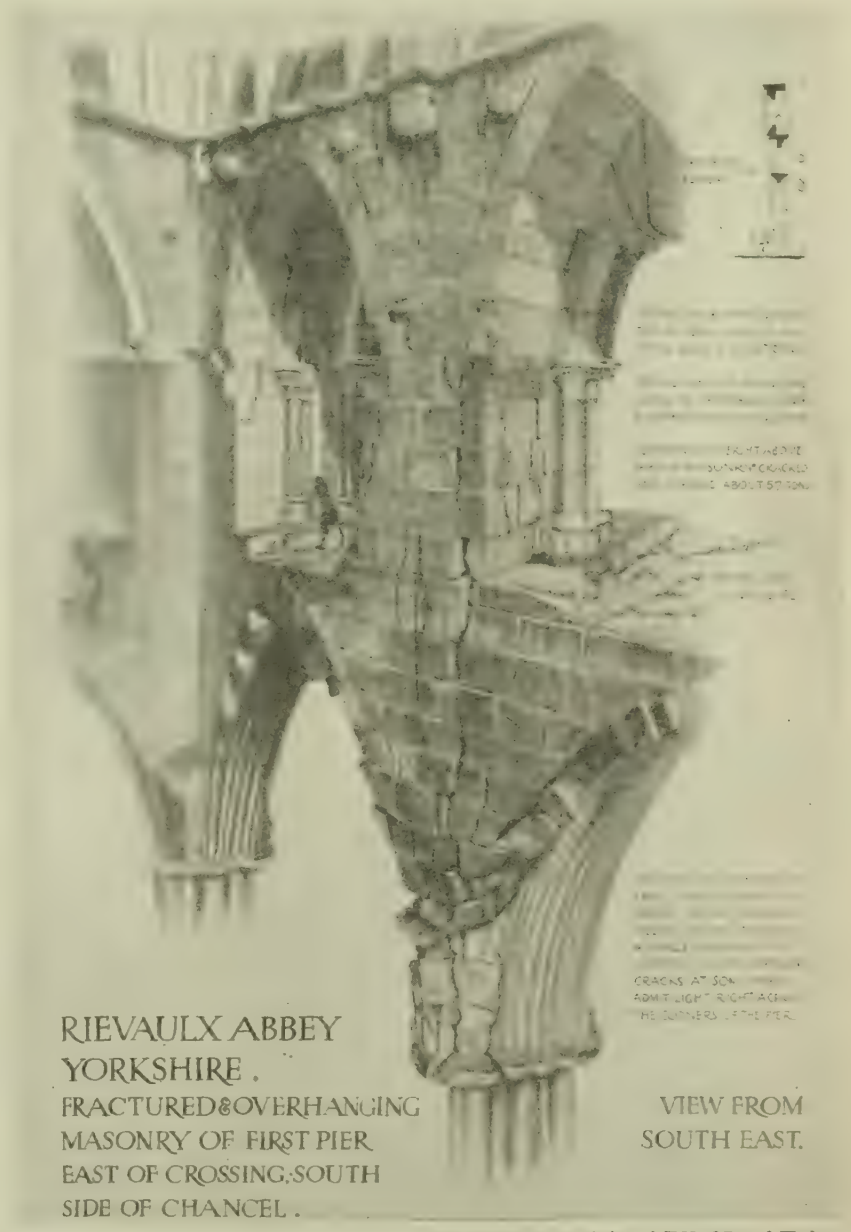
the masonry even in comparatively sound portions of the ruined building :—

"The roots (of young trees and shrubs) growing in the clerestory passage at the sixth and seventh openings have now been removed; the roots average ¾ in. in thickness, and were growing to a depth of 15 in. below passage, and spreading over opening" (in triforium arcade). These were by no means the largest roots dealt with. "The lime in these openings is in a rotten condition." "Raking out and pointing is also proceeding at the west end of south choir wall, immediately above fractured pier. care being taken to leave the fracture until the pier is secured."

"SHORING AT FRACTURE.—Shoring is now proceeding, two clusters of seven poles each being placed in position on the south elevation and a 12 in. by 9 in. built up with bolts forming a cross-head to carry screw jacks. This cross-head also is taking the weight of the sandwich beam. Preparations are now being made to box in the ornamental corbel on interior elevation with concrete to take the thrust of shoring from that side. All the mouldings and mason work is carefully protected with paper and old canvas."

The condition of the ruin having been found much worse on detailed examination than had appeared at first sight, it became necessary to strengthen the timber shoring, now three and a half years old. The composite standards mentioned in the report were threaded into the old structure, which was supporting timber centres under the adjoining triforium arches. The "sandwich beam" was part of the temporary shoring put up in 1918 and consisted of four horizontal beams, two on the north and two on the south side of the shattered spandril. Each pair of horizontals was connected with uprights, against which horizontal planks were laid to retain the bulging mass of loose masonry between the level of the triforium floor and the broken springer of the aisle vault. The apparatus was fastened on by four long bolts passing through the main horizontal timbers and joining those on the north to those on the south side of the wall. It was designed to maintain the loose stones in position until such time as they could receive attention and it was now proposed to strengthen it by additional uprights, "two clusters of seven poles," from the ground below, in order that it could take vertical pressures as well as horizontal. A shore was put against the inner face of the wall to prevent a possible local hinging action.

The wall top would certainly tend to rotate outwards to the south when the loose masonry was disturbed and it was considered probable that at a point about the level of the triforium floor the already shattered masonry might tend to burst inwards towards the north. Boxing the ornamental corbel and mouldings in concrete protected them during the operations and allowed of the pressure from the shore being applied with perfect uniformity to masonry that would have been weakened by the insertion of needles.



The report for September 29, 1921, states that the shoring is now complete and that the apparatus for underpinning including oak balks for the screw jacks to work upon and a pair of 2 in. diameter steel bars set at the ends had been prepared for the difficult work of removing the core of the old wall. The report for October 13 records the commencement of the actual cutting out :—"The ashlar on south elevation is being carefully removed and the shattered rubble core cleared out in sections. The back of ashlar stones forming interior or north elevation being exposed in every section"—*i.e.*, the whole interior of the wall was hollowed out piecemeal—"this is then thoroughly washed out and grouted, the core being replaced with 6 to 1 cement concrete reinforced with ⅝ in. rods. These rods when necessary have hooked ends to bond with next section, the concrete being also stepped or rebated for bonding as per attached sketch." (Fig. 3 is compiled from the series of these sketches.) "The tell-tales are kept under close observation while work proceeds. All ashlar replaced is securely bonded to the concrete by means of Delta metal cramps."

The excessively disintegrated state of the pier above the shattered spandril (Fig. 1) had added to the anxiety and difficulty of the work and at the sixth cut it became necessary to take down the fractured ashlar of its western jamb to avoid the danger of injury to the masons. An additional strut was inserted from the gantry to hold the arch above but the quantity of stone disturbed in cut 6 was larger than it had been intended to deal with at any one time. As each new section was cut into the tons of material above might find occasion to settle on the new bearings, and this unexpected extension of the field of operations meant in any case that longer time must elapse between the commencement and completion of the recoring work in cut 6.

The fractures had been bridged with "tell-tales" before any work was commenced and these were kept constantly under inspection. An even finer gauge of structural movement existed in the pointing already executed to adjoining portions of the wall.

The Historic Buildings Branch pointing is executed in so painstaking and conscientious a fashion that a hair crack arising in it after it has once become thoroughly set may be relied upon as a certain indication of movement in the masonry masses. The unusual and experimental nature of these works of repair makes it necessary to keep the state of the building under observation and the "pointing" is the best possible indicator. The nature of the operations made it obvious that some movement was inevitable, and the most that could be hoped was that the reinforcement already introduced in the wall top and the clerestory passage would prevent it assuming a dangerous character. At the best, movement might have been postponed until the slackening of the support afforded by the gantry should throw all the weight upon the repaired portion of the pier; at the worst, it would have shown itself with the removal of the first stones from cut No. 1.

As bad luck would have it, a gale of wind set in before cut 6 was completed and added vibration to the eccentric load upon the fractured pier. The old fissures at the clerestory cill started open again and continued as hair cracks across the wall top at both ends of the out-bowed south chancel wall. The assumption that the wall as a whole had been drifting towards a fall

DRAWING MADE FROM TEMPORARY SCAFFOLD ERECTED IN 1918 BEFORE ANY WORKS OF REPAIR HAD BEEN UNDERTAKEN BY THE HISTORIC BUILDINGS BRANCH.

was verified by this new development and the critics who had objected to the use of reinforcement as unnecessary were proved to have taken too optimistic a view of the case.

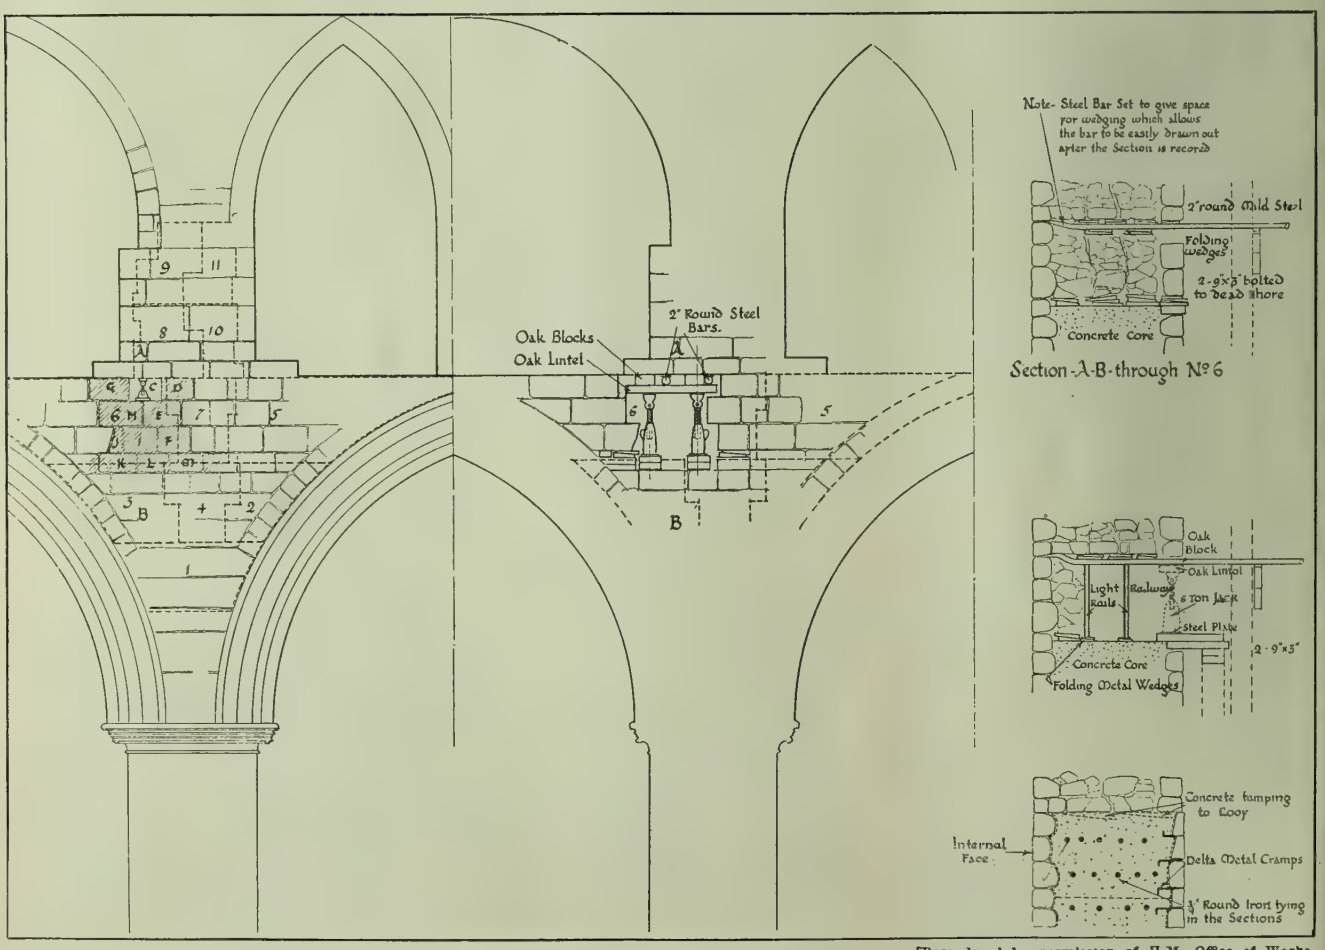
Mr. David Black, who had executed the work of recoring the tower piers of Jedburgh Abbey for the Historic Buildings Branch, was brought down to Rievaulx to set things in train again and the remainder of the work of recoring proceeded without mishap. The gantry was removed without occasioning any further movement, and the pointing that had opened was cut out and tamped afresh with new material.

To obtain first-hand information as to the finished effect of the repairs of which I had seen the commencement, I visited the ruins recently and no further defects were perceivable although the whole wall top was examined foot by foot. The work showed no signs of failure either at the old points of fracture nor anywhere else, and though a glance at the plan (No. 4) will convince anyone experienced in the behaviour of reinforced work that hair cracks are to be anticipated at or about the points of greatest curvature at some time in the future, none had developed at the time of my visit, about a year after the conclusion of the repair. In view of the experimental nature of the work, the long standing of the defects, and the heavy eccentric load dealt with, which affects the whole wall (see plan 4) as well as the fractured pier, this result testifies to the reasonable nature of the repairs and to the thorough manner of their execution.

In this matter the Historic Buildings Branch is to be congratulated upon its excellent staff of trained masons, who work in connection with the architectural direction under conditions which tend to the best development of a fine tradition in an atmosphere of mutual confidence and respect. The work demands the interplay of practical and theoretical knowledge which can only be obtained by the establishment of conditions more nearly approaching those under which mediæval master builders are supposed to have worked than the usual routine of modern architectural office practice.

The training of the masons is considered by the Director of Works, Sir Frank Baines, M.V.O., C.B.E., as a vital part of the work, and the usual conception of the red-tape bound Government Department is utterly false when applied to the Historic Buildings Branch works upon the monuments in its charge. Access to documents, with permission to publish matter of public interest, was granted by H.M. Office of Works.

EXHIBITION NOTES.



THE MANSARD GALLERY.

There is a peculiar attraction in table and ornamental glass of fine quality, and the collection of modern glass brought together by Heal & Son is selected and arranged with the taste which we associate with their work. The specimens shown are from the following countries: England, Scotland, Italy, France, Holland, Sweden, Czecho-Slovakia, Palestine and America, so that the field covered is very wide; and no doubt the examples represent the best of the work being done in them.

The covered blue glass pots and small dishes of rude but traditional character from Hebron, near Jerusalem, interest us from their nice shape and intrinsic glass quality. As the work of two old men with no successor to carry on after them, the inclusion of these examples is of particular interest. Messrs. Powell's glass is too well known to need description here, and their reproductions of ancient examples are of real merit. A table of French glass is of fine quality, as the natural glass surface is better preserved than in some of the more mechanically finished examples; we noticed as specially attractive a large glass bowl and some finger glasses. Both in glass quality and design these rank among the best. Some English "Sapphire" glass might be a little difficult to live with, though technically good. The Swedish glass of a grey tint is agreeable, and some Dutch examples of slightly iridescent quality are very charming.

Some glass vases by a French craftsman should be noticed, in spite of the lack of complete success owing to their likeness to marble. We should regard this work as in an experimental stage, but resources of colour are revealed which have great possibilities when the treatment is more identified with the material. The Murano glass is, perhaps, a little meretricious in quality, but a large Venetian vase near by is of a certain splendour. The vase filled with coloured fruit, the work of Sala, a Frenchman, shows appreciation of the material, though our preference is rather for the natural effect of the glass without interior lighting. Another example of a similar subject, also lighted from inside, is less successful.

The exhibition illustrates the possibilities of contemporary craftsmanship, though there is a tendency to replace the best traditional qualities with a too mechanical perfection in some of the work. The English work takes a very high place. The prices of the glass vary rather arbitrarily. Glass with its particular fragility demands a price not prohibitive when the nature of the material is considered. The best examples of the craft generally come from individual workers who execute in small quantities, and the price of such examples tends to be high, as the artist desires to recoup himself for the cost of his experiments, the losses in firing, and other expenses connected with such work; and, perhaps, he is too inclined to charge this on to the purchaser all at once, instead of spreading it over a larger number.

Fig. 3.—Rievaulx Abbey.

Drawing Showing Position of the Cuts made into the Interior of Defective Pier and Method of Replacing Disintegrated Rubble Core with Reinforced Concrete.

We incline to the view that ordinary manufacture and work of this rarer quality cannot be reconciled in price without much closer co-operation between the manufacturer and the personal craftsman. The work of the latter falls into two divisions—one in which he personally produces pieces of a special distinction of character and richness of design, and the other in which he directs the ordinary standards of mass production into better channels. This latter is a matter of the education of public taste more than of money. A glass made properly for look and service should not claim a sort of privilege in price, nor should it cost much more to have a good tumbler or vase than to have ugly ones. The craftsman of distinction owes it to the public to aid the manufacturer, and the manufacturer needs more public spirit and anxiety to be so helped.

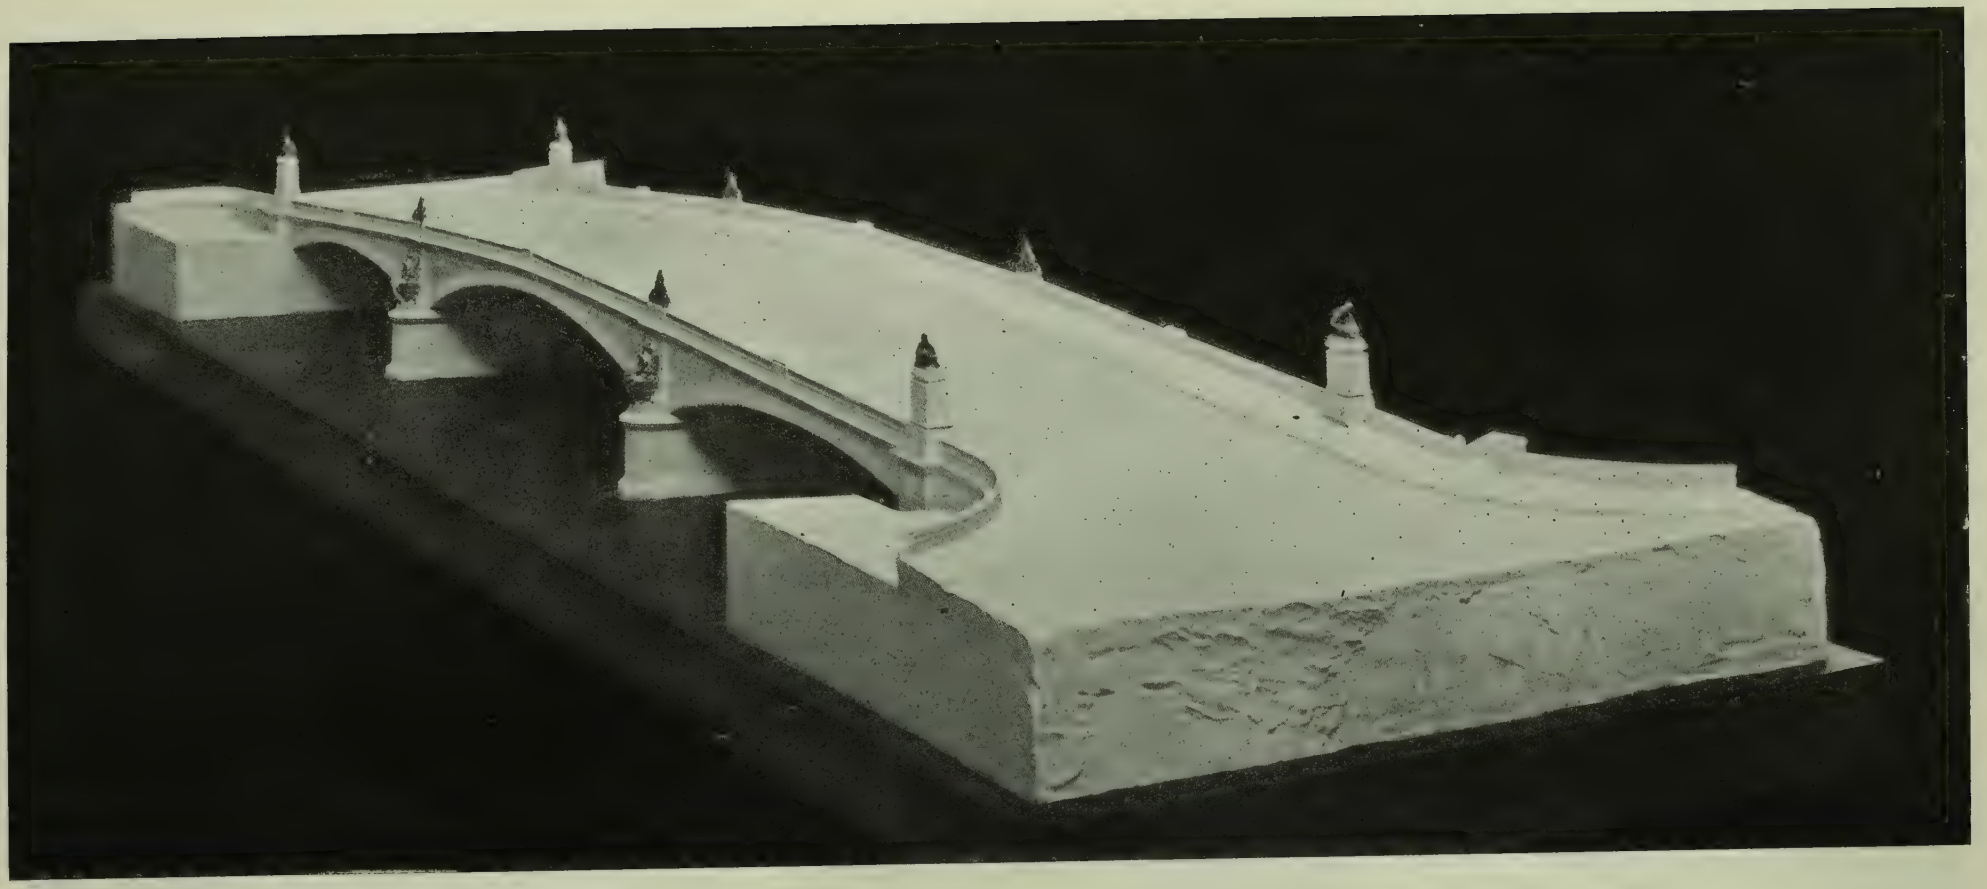
THE NEW SOCIETY OF ARTISTS.

One may readily pick out a number of pleasant pictures at the Suffolk-street Galleries from the exhibition of the New Society of Artists, such as Nos. 2, 4, 20, 27, 28, 40, 41, 54, 57, 76, 79, 82, 85, 120, 123, 188, 200 and 220, but the exhibition as a whole does not strike one as specially "new." It would be really new amongst our large output of pictures if there were a high average of good subjects and a better sense as to why it is worth painting pictures at all. We want artists to select and put before us those countless aspects of beautiful form and colour which the world supplies and which the public, in its neglect or ignorance, so woefully misses. The literary value of a picture may be great, even apart from sheer beauty, but we seldom expect, or find, that; what we have a right to expect is some of that vision of beauty in the world which the artist has power enough to convey in his picture. Out of nearly 400 pictures there should be more to arrest and please those who can respond to the appeal of the artist.

THE FRENCH GALLERY.

Characteristic examples of modern French and Dutch artists are now on view at the French Gallery. It is interesting to compare the work by Corot (No. 3, "Lac d'Italie") with his later work. This is a beautiful picture very carefully wrought and very solid in effect compared with his later work, such as the beautiful little pictures, Nos. 17 and 24; the latter is a wonderful expression of peacefulness. Several pictures in pastel by L'Hermitte are to be seen; one familiar to us is "Le Village" (No. 23), an almost perfect piece of colour and composition; how poor are the results of most present-day work compared with this. A masterly painting by Edouard Manet is "Pont du Bateau" (No. 19), and a fine Daubigny is one of the estimable things. If there is a lack of spontaneity and freedom in much of this work, it touches a high-water mark of achievement in some cases.

PASTEL LANDSCAPES.



The value of pastel as a medium is great, but its highest value is not always attained, for there is too much tendency to make it simulate other methods. Mr. Frank H. Swinstead has a small exhibition in pastel at Bromhead Cutts & Co.'s, Cork-street, which shows some decided success, though in many of the drawings we find some woolliness and blackness of effect. In Nos. 22, 18, 14 and 16, we find happy results, and a particularly good drawing is No. 11, "Chalk Pit near Corfe." We believe if this artist would cultivate slighter and less laboured methods he would reach a much higher level.

Fig. 2.—Rievaulx Abbey.

PHOTOGRAPH SHOWING MASONRY AFTER COMPLETION OF RECORING THE SHATTERED SPANDRIL AND PIER. NOTE OLD STONES RETAINED IN POSITION.

Oswald Street Bridge, Glasgow: Selected Design.

[The main dimensions of the design, which is by Messrs. Considère Constructions, Ltd., are as follows:—Side spans, 122 ft.; centre span, 165 ft.; rise of centre span from the springings to underside of arch, 14 ft.; width between parapets, 80 ft. In order to make provision for the expansion and contraction under variations of temperature it is proposed to carry the whole of the spans on steel roller bearings of a type similar to those often adopted in steel bridges. The river piers will be founded on three circular caissons, 20 ft. in diameter, made of reinforced concrete, and provided with a steel cutting edge. The shore abutments will be carried on three caissons, 16 ft. in diameter. At the request of the City Engineer, Messrs. Considère Constructions, Ltd., have allowed for the whole of the bridge being faced with granite, and the parapets will also be constructed of this material. When completed the bridge will be the most ambitious project yet carried out in this country in reinforced concrete..]

THE UNIVERSITY OF LIVERPOOL.

ANNUAL EXHIBITION OF ARCHITECTURAL DRAWINGS.

The Liverpool School of Architecture has enjoyed a peaceful and normal academic year. The moratorium caused by the war, and the rush created by the advent of the war students, are things of the past. The students number about 100. It seems probable that the numbers will hardly fluctuate for some years to come. Combined enthusiasm of the staff and students is, as usual, the feature of the school. We have been given figures which show that in an academic year the average architectural student at Cambridge spends 400 hours in the studio, and that at Liverpool the less strenuous put in 720 hours, and many towards 1,000. The output at Liverpool is certainly very large. In the class lists we find that the great majority of the fourth and fifth year students have matriculated, and, in consequence, become eligible for the B.Arch. degree. There may come the day when the public will discriminate between an architectural degree and an architectural diploma. Matriculation is a small thing in itself, but is, nevertheless, the hall-mark of a liberal education. It shows opportunities in tender years, or the grit in later years, to acquire what was missed in school days. The University rules require a three years' interval between matriculation and degree. Those taking the five years' architectural course can matriculate therefore up to the end of the second year.

Students at the School have now at the end of their third year to choose whether they will combine a little architecture with advanced construction, or advanced design with a little construction. Mr. C. H. Hutton, who shares with Mr. L. John the first-class in Honours in Architectural Construction, shows twenty sheets of working drawings of a repertory theatre to seat 900. The drawings are most thoroughly worked out and comprise key plans, ½ in. and 1 in. details. Another interesting set of drawings is by Mr. H.F. Billimoria for a maritime terminal and customs house with spans of 89 ft. 0 in. and 109 ft. 0 in. Four designs for the Prix de Rome are hung. In the case of Mr. J. Williams, who obtained the Jarvis Travelling Studentship, the original sketch, prepared in thirty-six hours, is exhibited, as well as the worked-out drawings, for which ten weeks were allowed.

The subject, "A Recreation Centre for a Seaside Town," was largely a problem of levels. The conditions specified lifts and staircases from the promenade to the high ground on which the chief buildings were placed. Mr. Williams succeeded in also supplying an inclined way. Quite a number of the double bridges, the problem set for the preliminary round of the Prix de Rome, are shown. The stand which will make the greatest appeal to the lay mind is that in which are shown a number of six hours esquisses. The versatility of the staff who set the problems is as marked as that of the competitors. Originality, imagination, vivid and telling colours, are combined in many drawings. Taste has been defined as the subconscious perception of the suitable. In a six-hours esquisse the subconscious is a very important element.

We particularly liked the "College Barge" and the gay colouring of the "Band Stand." In Maxwell Fry, the School possesses a specially brilliant student; his pair of posters with orange skies and blue perspective advertising the Exhibition is most striking. It will be interesting to watch the progress of the younger students. Messrs. Minoprio, Shaw, & Todd show the promise of better work to come.

Not much work of the School of Town Planning is shown. The method of colouring adopted is likely to prove a little bewildering and confusing to the average town councillor, whose duty it is to administer the Town-Planning Act. The subject for this year's Lever Prize is the opening out of the district between Piccadilly and Soho-square.

Lord Leverhulme's Speech.

In declaring the exhibition open, Lord Leverhulme said his greatest recreation, greater even than that of collecting works of art, had been to dabble in bricks and mortar. He had been building all his life since, as a boy of nine, he constructed his first building—a rabbit hutch. Then, in the first year of his married life, he built a greenhouse—partly of bacon boxes—in the yard of his small house. In his early days in Liverpool he found that the general feeling of the community was against a business man putting very much money into bricks and mortar. He contrasted that attitude with the confidence which the merchant princes of the city had shown in floating palaces which had cost from £750,000 to over £1,000,000 each to build. His lordship confessed that he would have loved to be an architect. Port Sunlight was the first town he built; he was now engaged on the tenth. Six of them were to be found in the primeval forests of the Congo; three were in Cheshire, and the tenth was in Harris. Of all occupations that he (Lord Leverhulme) had ever been connected with, his association with architects had been the happiest.

EXAMINATION RESULTS.

The annual examinations have been completed. Fourteen students passed the degree of B.Arch. at the end of their fifth year, and six gained the equivalent diploma in Architecture for non-matriculated students. These 20 students are *ipso facto* exempted from their final examination for A.R.I.B.A., except for the passing of a special paper in Professional Practice. As last year, a number of them have, however, already obtained their A.R.I.B.A.'s through the War final. Among the students who obtained their diplomas at the end of the fifth year is a lady, Miss Musker. She is the second woman student in England to qualify in this way, the first being an A.A. student, Miss Cooke, who qualified last year. The third year students who have obtained the Certificate in Architecture are exempted from the Intermediate Examination of the R.I.B.A.

The list is as follows:—

Degree of B.Arch. with Honours in Architectural Design.

Fifth Examination (exempting from Final Examination R.I.B.A.)

Class I.

D. Brooke. S. E. Mahon.
W. B. Edwards. G. L. Owen.
E. M. Fry. E. Williams.
C. R. Knight.

Class II.

E. H. H. Higham.

Honours in Architectural Construction.

Class I.

C. H. Hutton. L. John.

Class II.

H. F. Billimoria. R. W. H. Vallis.
M. Raafat.

Ordinary.

H. W. Pritchard.

Fourth Examination.

Honours in Architectural Design.

C. T. Bloodworth. L. C. Howitt.
D. L. Bridgwater. C. R. Knight.
E. M. Fry. J. H. L. Owen.

Honours in Architectural Construction.

R. W. Donaldson. R. H. Turner.
A. L. Gabr. R. W. H. Vallis.

Ordinary.

F. H. Ashburner. G. H. Miller.
W. V. Jenkins.

Third Examination (exempting from Intermediate Examination R.I.B.A.).

F. N. Astbury. H. G. Phillips.
H. L. Barton. C. C. Shaw.
C. A. Minoprio. T. T. Wills.
H. A. Peters.

Second Examination.

A. Aspland. Norah Dunphy.
Sarah J. Dewsnup. H. G. C. Spencely.

First Examination.

E. F. Davies. K. R. Mackenzie.
R. G. Heal. G. A. Ridge.
May Hutchinson. Olwen Vaughan.

Diploma in Architecture, with Distinction in Architectural Construction.

Fifth Examination (exempting from Final Examination R.I.B.A.).

R. H. Jones.

Ordinary.

H. Hirst. A. C. Townsend.
Doris Musker. E. G. Woolley.

Fourth Examination.

Distinction in Architectural Design.

F. X. Velarde.

Third Examination (exempting from Intermediate Examination R.I.B.A.).

A. D. R. Cowley. G. E. S. Hereward.
F. H. Crossley. Frances T. Silcock.
Doris E. Dixon. H. Thearle.
H. B. Evans. Maud A. M. Wall.
H. L. Fox. Sheelah A. Wilkinson.

Second Examination.

W. R. Alderson. J. H. Isherwood.
G. A. Butling. A. C. Todd.
J. Heald. L. G. Zwinger.

First Examination.

V. S. Chahriman. J. B. Maxwell.
A. C. Cotton. J. G. Metcalfe.
W. H. S. Dobie. Marjorie M. Mocatta.
D. Hall. H. B. Stout.
O. G. Lewis. B. A. Sumner.
I. D. MacGillivray.

Certificate in Architectural Design.

N. R. England. B. G. L. Mansergh.

Certificate in Architecture.

F. N. Astbury. H. A. Peters.
H. L. Barton. H. G. Phillips.
A. D. R. Cowley. C. C. Shaw.
F. H. Crossley. Frances T. Silcock.
Doris E. Dixon. H. Thearle.
H. B. Evans. Maud A. M. Wall.
H. L. Fox. Sheelah A. Wilkinson.
G. E. S. Hereward. T. T. Wills.
C. A. Minoprio.

Prizes and Scholarships.

Hon. University Scholarship. — Edwin Williams (winner of Rome Jarvis Scholarship).

Holt Travelling Scholarship, Third Year, £50.—Francis Nicholas Astbury, Herbert Thearle.

Special Award of £20.—Frances Thelma Silcock.

Honan Travelling Scholarship (given by Liverpool Architectural Society), Value £50.—Francis Xavier Velarde.

Henry Jarvis Travelling Scholarship.—Edwin Williams, Wilfred Bythell Edwards.

The Lever Prize in Architecture.—1, Francis Nicholas Astbury; 2, Frances Thelma Silcock.

The Lever Prize in Civic Design.—1, Arthur Cecil Townsend; 2, Cyril Roy Knight.

The John Rankin Prizes for Sketch Designs, £12 each.—5th year, B. L. Owen; 4th year, D. L. Bridgwater, F. X. Velarde.

The Holland & Hannen and Cubitt Prizes for Working Drawings.—1 (£15), C. H. Hutton; 2 (£10), L. D. John.

Rome Finalists, 1923.—E. M. Fry, E. H. H. Higham, C. R. Knight, G. L. Owen, E. Williams.

THE PLANNING OF THE MODERN CITY.*

Mr. Nelson P. Lewis, as a leading American civil engineer and former engineer to the Board of Estimate and Apportionment of New York City, strikes a note which will appeal to municipal engineers, not only of his own country, to whom his book is dedicated, but also to engineers throughout the British Empire. The subject is treated from a municipal engineer's point of view, and as such deals primarily with the city-planning movement, especially in its relation to transportation problems by water, rail, or road.

Each of these branches of the subject is dealt with in extensive detail, and the chapter on the railroad in relation to the street system is of particular interest to English engineers to-day. Essential as the railroad is to the prosperity of the city, the long lines of embankments and deep railway cuttings passing through the built-up area of a town always present great difficulties in the development of an adequate street system. The different railway lines entering a city cannot be allowed to divide it into sections which are perhaps almost or entirely isolated the one from the other. The rival claims of the road and railway are well balanced in this chapter, and it must be recognised that the railways leading to and from a city are an all-important part of the town plan, and should be considered as such, and not treated as a separate problem.

Parks, recreational facilities, and civic centres, the latter playing a much greater part in the life of an American city than in cities of this country, are treated in a manner which arouses interest, even if some of the suggestions are not applicable to our own older cities. Perhaps the most interesting chapter in the book is that entitled "The Economic Value of a City Plan." It is always difficult to capitalise the advantages of any improvement or "betterment" which is for the free use and benefit of the public. Statistics, if skilfully handled, can be made to prove or disprove anything, and, when it is a question of expenditure of public money by a Corporation, we are, most of us, only too well aware of the criticism which can be levied at the municipal engineer in his efforts at improvement by the misuse of figures. For "when an attempt is made to estimate the value to the city, or state, of a more robust and vigorous manhood and improved working conditions, and the consequent saving in the annual budget for charities and maintenance of order, we are always dealing with something we know to be of enormous advantage, but one which can scarcely be expressed in £ s. d."

Some novel methods of dealing with the cost of various projects for general city improvement adopted by American cities are given, and if the methods hardly lend themselves for use in this country, they at all events should instil encouragement to get on with our job, and perhaps also a certain amount of American hustle in doing so. Many useful statistics have been collected on the subject of street traffic. Zoning, without which no town-planning book could, we suppose, see publication, is given in perhaps a rather cumbersome way. Fortunately, many of the problems arising in an American city are not to be met with in our own. A committee on zoning has been appointed by the American Secretary of Commerce to draft a model zoning ordinance and to prepare a simple comprehensive statement of what zoning is.

"Zoning," we are told, is "the application of commonsense and fairness to the public regulations governing the use of real estate. . . . It is a painstaking, honest effort to provide each district or neighbourhood with just such protection and just such liberty as are sensible in that particular district"—but the reader must himself finish the chapter to decide whether the definition meets with these requirements.

Some good "garden city lay-outs," both plans and photographs, illustrate a chapter on the subject. Interesting facts are given in the chapter on "City-Planning Legislation," but the succeeding chapters, "Progress and Method," and particularly "Financing a City Plan," are to be commended to the reader who is a little wearied and inclined to say that there is nothing new to be read on the subject of town planning. The use to which America is putting aerial photography is a hint to the regional surveyors in this country. The final chapter is one which must send the wearied municipal engineer back to his task with fresh zeal and inspiration.

In conclusion, and whilst congratulating Mr. Nelson P. Lewis on his second and greatly improved volume, it might be suggested that a rearrangement of some of the chapters would add still further to the attractiveness of the book, and this we hope will come with the third edition.

W. R. Davidge.

* "The Planning of the Modern City." (Second Edition.) By Nelson P. Lewis. 25s. nett. London: Chapman & Hall, Ltd. New York: John Wiley & Sons.

BOOK REVIEWS.

The Elementary Principles of Lighting and Photometry. By John W. T. Walsh. (London: Methuen & Co., Ltd. Price, 10s. 6d. net.)

With the rapid advance and multiplication of methods of illumination, the appearance of a volume which aims at co-ordination is welcome. Correct illumination is one of those matters which is now rapidly becoming a specialised task. The beauty of a fitting, which was at one time the craftsman's and architect's chief concern, is often a secondary consideration, and the proper disposition of the right amount of light for the particular purpose for which an apartment is required takes precedence.

The eye is more easily injured by too much light than too little, and the ignorant are apt, in matters of illumination, to confuse quantity with quality. In a recent lecture before the Royal Photographic Society, electric light was blamed for eye trouble. One might as reasonably blame food for stomach trouble; yet we cannot abstain from eating. It is not from the thing itself, but from its particular usage that trouble arises. The aim of Mr. Walsh in treating the subject of illumination scientifically is to dispel ignorance by gathering together the latest ideas, discoveries, and inventions.

Chapters dealing with indoor lighting and industrial and school lighting will particularly interest architects. Each room in the house is considered individually, and the best method of lighting discussed. Most architects would specify illumination in front of a dressing table, yet few know the precisely correct spot for it. There is one, and Mr. Walsh indicates it. The section on museums and galleries is somewhat inadequate. No reference is made to Mr. Hurst Seager's invaluable researches; neither are the methods indicated in accordance with his principles. We should like to have heard more about theatre lighting.

Structural Design in Theory and Practice. By Henry Adams. (London: Constable & Co., Ltd. Price, 10s. 6d. net.)

Mr. Adams' text-book is one of the most lucid expositions of an immensely complicated subject that we have seen, and we cannot too strongly recommend it, not only to the student and the tyro, but also to the practising architect, who failing absolute omniscience, or at least a highly specialised acquaintance with this branch of his profession, is frequently in need of aid in the solution of some structural problem. The book is, however, primarily arranged, not as a work of reference, but as a skilfully graduated course of instruction in the subject comprehended by its title. Timber is the first material to be dealt with, followed by steel, cast-iron, and concrete, some of the matter on concrete appearing for the first time in this, the second, edition.

Nevertheless, concrete would seem to receive a disproportionately small amount of space. It has been dealt with elsewhere and is, of course, the subject of other volumes, among them being Mr. Adams' "Reinforced Concrete in Theory and Practice," but concrete surely plays a more important part in structural design than the small number of pages devoted to it would indicate. Building by means of pre-cast concrete members is not touched on by the author.

War Memorial Tablet in the Hall of the Watermen's Company.

Messrs. Hall-Jones & Dewhirst, Architects.

[This memorial is in carved English oak, with the lettering and crest inlaid solid in holly. The work was executed by Messrs. John Daymond & Son, Ltd., of 1–7, Edward-street, Vincent-square, S.W.1, who also carried out two memorial tablets at the Metropolitan and City Police War Memorial Hospital, illustrated in our last issue.]

THE BUILDING TRADE.

TECHNICAL EDUCATION AND THE BUILDING INDUSTRY.

A CONFERENCE took place in Manchester on June 28, when the members of the Manchester Branch of the Institute of Builders entertained a large number of teachers of building subjects and others interested in technical education in the north-west area. The host for the evening, Mr. S. Smethurst, J.P., of Oldham, was unfortunately unable to be present, but his place was filled by Mr. John M. Macfarlane, the President of the Branch.

In opening the conference, Mr. Macfarlane laid stress on the great importance of technical instruction to the building industry and deplored the fact that so little attention had been given to this question in the past by the industry as a whole. In the post-war years, he said, some progress had been made, and he looked upon that conference as another step in the right direction, since it was a direct invitation from the representatives of the industry to the teachers, who were naturally those most intimately concerned and acquainted with this important work. He also referred to the step which has been taken by the Institute of Builders in deciding to devote themselves to the work of education and research in the industry, interpreting those terms in the widest sense as representing the basis for all real improvements in the industry generally. In speaking of the work now being done in the technical schools, he said while he was anxious that they should not think that he was lacking in appreciation of all that those activities meant he would like to give expression to his own opinion, which he had held for some time, that, while the professional and more capable student was well provided for, the student apprentice, and particularly the less capable apprentice, did not receive the same attention, since for many of this group the courses now in existence were too long and too difficult. He hoped the conference would have definite results, and he would urge that this be one of the problems which should receive very careful attention.

Mr. J. Leask Manson, H.M.I., referred to the fact that 25 of the teachers present that evening were now attending a course of lectures in Manchester which had been organised by the Board of Education for teachers of building subjects in Lancashire and Cheshire. That was one of a number of such courses which had been held during the last few years, the object being to offer the best facilities possible under present conditions for the purpose of enabling teachers to keep in touch with the latest developments by attendance at lectures and at laboratory demonstrations and by participation in discussions concerning their work. That particular course had dealt with a series of subjects which were now receiving attention in the advanced courses which it had been found possible to introduce into some of the larger schools in the area. They had been peculiarly fortunate in obtaining the services of able and enthusiastic lecturers. Dr. R. E. Stradling had dealt with the experimental investigation of building materials; Mr. F. E. Drury, M.I. Struct.E., had dealt with the application of mechanics to structural work; Dr. G. S. Coleman had given a series of lectures dealing with the equipment of buildings; and Mr. L. A. Gerrard had introduced the subject of building practice. In dealing with the progress of technical instruction in building subjects in recent years, he referred to the serious effects of the war period upon this work. Since 1919, however, there had been, on the whole, a steady, and in some cases a remarkable, increase in the numbers of students attending for instruction. Even the present serious industrial depression had had no marked effect upon these increases, and, in view of the fact that they might reasonably expect still further progress in the industry in the near future, with a return to more flourishing times, he hoped that both the industry and the schools would be prepared to make such use of these favourable conditions as to raise the provision of technical instruction in the work of the building industry to a level which it had not yet reached. In referring to the criticisms made by Mr. Macfarlane, he asked that full consideration should be given to the conditions under which the work had still to be conducted. Nearly the whole of the instruction was given in part-time classes conducted in the evening. In spite of the disabilities which those conditions imposed both on teachers and students much successful work had been done, but it was the common experience that, in spite of many serious efforts to extend the field so as to include the less capable and less ambitious student, they had to depend in the main on the more capable and more ambitious student; that fact was naturally reflected in the character of the courses which had been set up. On the other hand, with increased backing from the industry and with such increases in the numbers as would justify the provision of special classes it would be possible to develop trade courses more suited to the capacity of the average apprentice. It was possible that the time had now arrived when that development might take place and he was sure that, provided the new work was conducted on right lines, it would enable them not only to retain students who now dropped away owing to lack of ability or lack of perseverance but also to raise still further the standard of work done in the more advanced courses. That was important in view of the fact that work done in building classes had to bear comparison with similar work in other sections of technical instruction, in some of which very marked progress had been made in recent years.

Mr. Harold Rostron, B.Sc., Chairman of the Council of the Union of Lancashire and Cheshire Institutes, spoke of the work of that Union in connection with technical education. The Union represented an association of education authorities and technical institutions for the purposes of promoting schemes of instruction and of co-ordinating and simplifying the work of examination. In recent years they had examined the work of between 30,000 and 40,000 students each year. Schemes of courses had been set up for all the important industries and the work of each group was watched by expert advisory committees upon which the teachers had strong representation. The members of the Building Advisory Committee had for some time issued a more or less informal invitation to some of the building employers' associations in the area to send representatives to assist in the work. It was now proposed to put that arrangement on a more permanent basis, and the Council of the Union had decided to invite employers and others interested in the work of technical education in this area to nominate suitable representatives to be placed upon consultative panels, so that the Council could seek their advice whenever developments in courses dealing with the work of a particular industry seemed to justify such a step. He would therefore ask the members of that Institute to keep that matter in mind, so that when the time arrived a strong and able panel might be set up in connection with the work of the building industry in Lancashire and Cheshire.

Mr. J. W. Riley spoke of the development of building courses under the Union, with which he had been associated for a considerable number of years. There had, he said, been a steady improvement in the standard of the work attempted, and he agreed that, with the promise of increased support form the industry, still further progress would be possible. The increase in numbers alone since the close of the war had been remarkable, and there were reasons for believing that, even if not in so marked a form, that increase might continue. In 1920 the number of separate papers worked by candidates from building classes was 1,115, in 1921 it rose to 1,931, in 1922 the figure stood at 2,594, and in 1923, in spite of the fact that considerable changes had taken place in the courses offered, they reached the figure of 3,564 papers, representing the work of well over 1,200 students.

Mr. Fearnley, for the Institute, emphasised the need for thorough instruction in practical geometry for all trade students, and showed how useful such knowledge could be in connection with the problems of the various trades.

Mr. Pearson spoke of the conditions under which the teacher of building subjects had to carry out his work. He made a strong plea for more personal interest in this work on the part of the individual, and said he was convinced that, quite apart from any official arrangements, visits to the schools from the employers would be welcomed and would prove mutually beneficial. He also referred to the institution of national certificates in the engineering and other industries, and hoped that the day was not far distant when they might expect to see similar schemes set up for the building industry.

Mr. F. E. Drury spoke of the work of some of the larger technical colleges in the district, not forming part of the work of the Union, in developing the more advanced forms of instruction. There was great need not merely for the display of general interest but of active participation in this work by the building industry. It was not because of lack of interes on the part of the teachers that greater extent sions in the provision of trade courses had not been possible. The complexity of the industry and the separation into a large number of trades was one serious factor which always retarded developments. He was glad to know that the builders' foremen in Manchester proposed to set up an organisation by which they could develop the lectures dealing with their work. Much more than that was of course necessary, particularly in the provision of instruction for the young men now entering the industry, from whom would be drawn the builders and higher technical staffs of the future.

Mr. H. H. Wareing, Principal of the Oldham Technical School, spoke of the great success which had attended the setting up of properly-organised day classes for apprentices in the plumbing and the painting and decorating trades at Oldham eleven years ago. From the first those classes had the hearty and active support of the local representatives of these trades, both employers and operatives, by whose assistance it had been possible to keep them running even during the difficult years of the war.

Mr. Henry Mathews, J.P., Vice-President of the Branch, said the problem of education for the building industry was full of difficulties and merited earnest consideration. While he was sure that many of his colleagues fully appreciated the importance of this work he would like to see that feeling become more widespread. He understood that the building teachers in Yorkshire had formed an association to deal with the questions and had invited representatives of the industry to join them. That was an excellent plan, and he was sure nothing but good could come of a genuine association together of the members of the industry and those interested in the work of instruction. He was glad that they had now received an invitation to visit the teachers at the schools.

The meeting closed with the expression of a wish that such a conference might be repeated in the near future.

THE NEW EXAMINATION SYLLABUS OF THE INSTITUTE OF BUILDERS.

The Syllabus of the Examinations which, after December, 1923, will be the qualifying test for membership of the Institute of Builders* is a most arresting document. Few have realised the gradual widening of the knowledge required by a modern master builder or have appreciated its far-reaching character. The direction of building in big cities is no longer the occupation of the intelligent craftsman between the strokes of his plane or the swings of his hammer. It is an occupation requiring a high measure of skill and ability, as well as a large amount of specialised knowledge. In every direction this need for knowledge is being realised and a great tribute must be paid to the Institute itself and to the progressive spirits who are at its head for their foresight and energy in placing this scheme before the industry. With a standard thus set building will rise to its rightful position in relation to other industries, and will show that its exponents are men of standing. The creation of a high standard will help to attract men of fine calibre and education, who in turn will raise the status not only of the industry but of every individual exponent.

This achievement is the inevitable corollary of the creation of the syllabus that now lies before us, and its existence alone is therefore an event of outstanding importance.

Attention must, however, be directed not merely to the fact that a standard now exists by which to test the knowledge and suitability of candidates for the hall-mark of membership of the Institute, but of the subjects required and the extent of the knowledge that must be displayed.

The list of subjects appears comprehensive and formidable until the existence of alternatives is realised, when it is seen that any man of reasonable skill and application should be able to obtain a pass. But in the course of time the standard will be raised and the number of subjects increased. The first stage qualifies the candidate for the degree of Licentiate, and comprises :—

"Where the Examining Board deem it advisable they may require the candidate to submit to an oral examination. The examination in the above subjects will be of an elementary character."

The minimum age of entry is 19, and after passing the examination the candidate must be duly proposed and seconded.

The subjects of examination aim at the creation of a sound ground upon which to build future knowledge and cover the salient requirements of the head of a business treated in an elementary manner.

The most important feature is the stress laid upon bookkeeping and accountancy and builders' quantities, which are now accepted as vital subjects to the builder, subjects which, in the past, have been neglected as much as possible in favour of various rule-of-thumb systems. Architects, surveyors and builders themselves will all welcome the development of knowledge in the directions indicated, which should in the course of time tend to secure more equality in tendering and the elimination of the man who secures work at ridiculous prices and then either retires, scamps the work, or goes bankrupt—all equally undesirable results.

The remaining subjects give a wide choice to the candidate so that he may, as far as possible, develop those parts of his training which are best suited to his personal attainments or to the particular business to which he is or hopes to be, attached.

The examination for the Associateship extends the knowledge required by the Licentiate and comprises the following :—

" Group 1, building construction ; Group 2, bookkeeping, finance and costing ; Group 3, quantities and estimating ; Group 4, forms of contract ; Group 5 (one section to be selected), (*a*) steel and reinforced concrete construction, (*b*) specifications, (*c*) temporary buildings, (*d*) shopfitting ; Group 6 (one section to be selected), (*a*) history of architecture and crafts, (*b*) the Building Acts and Public Health Laws ; Group 7 (one section to be selected), (*a*) surveying and levelling, (*b*) landlord and tenant, (*c*) vendor and purchaser, (*d*) valuation. Where the Examining Board deem it advisable they may require the candidate to submit to an oral examination."

The candidate must be at least 22 years of age and in addition to passing the examination must fulfil certain specified qualifications before being elected a member.

The stress again laid upon bookkeeping, finance and costing, quantities and estimating is noticeable, and it is also extremely interesting to note the inclusion of history of architecture, surveying and levelling, and some of the legal subjects connected with the occupation of land and buildings. Many builders manage their own or other estates, and so long as this work is delegated to them they should possess the knowledge required to deal satisfactorily with the work. The tendency will probably be to emphasise the difficulty of the subject and to result in the employment of surveyors.

The inclusion of " Forms of Contract " as a compulsory subject is most commendable, many builders being now far too ignorant of the liabilities and responsibilities which are necessarily thrust upon them as soon as they undertake building work by formal contract.

The Syllabus as issued includes a short summary of the scope of the proposed examination in each subject as a guide to prospective students and teachers, and until several sets of actual examination papers are available will be invaluable.

A summary of the scheme shows that—

1. There is an examination for Licentiates of the Institute of Builders, with an age limit of 19 years.

2. An examination for an Associate, with an age limit of 22 years.

3. That while few candidates of the minimum ages mentioned will have the knowledge required for the examination, the door is open for the brilliant and exceptional student.

4. That each grade of membership has certain qualifications which the candidate should read before entering for the examination. They are set out as follows :—

(*A*) Licentiate : Article 9.—A person shall be eligible for admission at the discretion of the Council as a Licentiate of the Institute if he shows to the satisfaction of the Council that he possesses at the date of his application the following qualifications—that is to say : (*a*) that he has attained the age of nineteen years ; (*b*) that he has passed the necessary examination ; and (*c*) that he has been duly proposed and seconded on the appropriate forms.

(*B*) Associate : Article 8 (*b*).—1. That he is a Licentiate and has attained the age of twenty-two years. 2. That he has been engaged in business as a master builder or as a master in some branch of the building industry, or has held what the Council deem to be a suitable position in a building firm for at least three years preceding his application. 3. That he is himself a member (or any firm or company in which he holds such suitable position is a member), of an association which, in the opinion of the Council, is a recognised association of building trade employers. 4. That he has passed the necessary examination of the Institute for Associate membership. 5. That he has been duly proposed and seconded by members, as above, on the appropriate forms.

5. That there are many alternative subjects which make it possible for every Master Builder to find a group suited to his own requirements. As is necessary at the commencement of any new scheme, arrangements have been made for the entry into the Institute of qualified members either :—

(*a*) In certain cases without examination, which, after December, 1923, will be rigidly limited in number.

(*b*) By the attainment of a certain age and the subsequent passing of a modified examination.

The syllabus has been issued this month so that technical schools all over the country may include the necessary subjects in the school curriculum for 1923–24. The whole of the subjects will be included in the principal London building schools north and south of the Thames, including the Brixton School of Building and the Northern Polytechnic, and it is hoped that the provincial and local schools will give the matter serious attention and make similar provision.

This syllabus undoubtedly marks a most important step in the development of building, and the industry owes more than it perhaps realises to those of its members who have conceived the scheme and launched it so successfully.

The first examinations will be held in May or June, 1924.

*Copies of the Syllabus can be obtained upon application to the Secretary, Institute of Builders, 48, Bedford-square, London, W.C. 1.

THE RENT BILL.

We have now received the Rent Bill as amended in Committee, and there are more amendments than those we have already mentioned. In clause 2 the landlord has to come into " actual " possession, and two provisos are added to subclause (1) of this clause as follows : " Provided that where part of a dwelling-house to which the principal Act applies is lawfully sublet, and the part so sublet is also a dwelling-house to which the principal Act applies, the principal Act shall not cease to apply to the part so sublet by reason of the tenant being in or coming into actual possession of that part, and if the landlord is in or comes into actual possession of any part not so sublet the principal Act shall cease to apply to that part, notwithstanding that a subtenant continues in or retains possession of any other part by virtue of the principal Act." It will be seen this is very involved.

Then there is a second proviso, " Provided also that where a landlord comes into possession under an order or judgment made or given after the passing of this Act on the ground of nonpayment of rent the principal Act shall, notwithstanding anything in the foregoing provisions of this subsection, continue to apply to the dwelling-house." This proviso appears very unreasonable.

Subsection (2), which relates to the granting of leases or agreements after the passing of this Act has been amended. As we have already indicated, the term must end some time after June 24, 1926, instead of 1925, and the term granted must be a term of not less than two years.

In clause 3, which relates to the grounds on which possession can be claimed, paragraph (*b*) of subclause (1) now reads : " The dwelling house is reasonably required by the landlord for occupation as a residence for himself or for any son or daughter of his over 18 years of age or for any person bona-fide residing with him or for some person engaged in his whole-time employment or in the whole-time employment of some tenant from him or with whom, conditional on housing accommodation being provided, a contract for such employment has been entered into, and (except as otherwise provided by this subsection) the Court is satisfied that alternative accommodation is available, consisting of a dwelling-house to which the principal Act applies and which is reasonably suitable to the needs of the tenant and his family as regards extent, character, and proximity to place of work, and is reasonably suitable to his means." It will be seen that the alternative accommodation has been much more particularised than in the Bill as drawn. Paragraph (*e*) has been amended in much the same way where housing accommodation is part of the contract. Paragraph (*f*) has been

considerably amplified, and now reads: "Where the dwelling-house is reasonably required by the landlord for occupation as a residence for himself or for any of his children, and where the landlord or the husband or wife of the landlord did not become the landlord before June 30, 1922, the Court is satisfied that greater hardship would be caused by refusing to grant an order or judgment for possession than by granting it." We may remind our readers that this paragraph relates under the principal Act to cases where the existence of alternative accommodation can be dispensed with, whereas paragraph (*b*) above relates to the grounds upon which an order for possession can be made.

A new subclause has been added to this clause, 3, and it alters section 5, subsection (6), of the Act, which provided that where a landlord has obtained possession of a dwelling-house on the ground that he requires it for his own occupation and it proves that he made some misrepresentation or concealed material facts, the Court can order him to pay the former tenant compensation. The new subclause reads: "Subsection (6) of section 5 of the principal Act shall be extended so as to apply in any case (*a*) where the landlord has, after the passing of this Act, obtained an order or judgment for possession or ejectment on any of the grounds specified in paragraph (*d*) of subsection (1) of the said section, and it is subsequently made to appear to the Court that the order or judgment was obtained by misrepresentation or concealment of material facts, and (*b*) so as to authorise the Court, in addition to making an order for payment of compensation by the landlord to the former tenant, to direct that the dwelling-house shall not be excluded from the principal Act by reason of the landlord having come into actual possession thereof under the said order or judgment, and if such a direction is given, the principal Act shall apply and be deemed to have applied to the dwelling-house as from the date mentioned in such direction."

There is a new subclause added to clause 4 which deals with certificates as to houses out of repair, which is a necessary corollary to the clause. It is: "When, after the issue of any such certificate, the landlord has executed to the satisfaction of the sanitary authority the repairs which require to be executed in order to put the dwelling-house into a reasonable state of repair, the authority may, on the application of the landlord and upon payment of a fee of 1s., issue a report to that effect." Clauses 7 and 8 of the original Bill have been deleted. The first related to rates compounded, and the second to mortgages. These represent the amendments introduced into the Bill in Committee, but it was promised by the Minister that the clauses' relation to preimums should be strengthened.

Before this article appears in print the Report stage will have been reached, and it is understood the creation of advisory committees will be subject to much opposition. We are in agreement with that opposition, as we consider they are most objectionable. It is understood that the Government anticipate that as a result of this Bill the County Courts may be overworked, and some relief is necessary. If that be the reason for the creation of these advisory committees it is a criticism on the measure itself, as it shows a great increase of litigation is to be anticipated from this further unnecessarily intricate legislation, and we quite believe this will be the case; but may we suggest there is a precedent for dealing with it in a better manner? Under the Workmen's Compensation Act when it was first introduced there was a great increase in work in the County Courts, and powers were given to the judges, with the approval of the Lord Chancellor, to appoint arbitrators with an appeal to the Judge. These arbitrators did the work admirably, and there were very few appeals, and such a tribunal of legal arbitrators is far superior to any mixed committees. We trust that this will be the course adopted in regard to the Rent Act.

THE WEEK IN PARLIAMENT.

WESTMINSTER, *Wednesday.*

Housing in Surrey.

Mr. N. Chamberlain informed Mr. Ede that, according to a return made in 1919 by local authorities in the administrative county of Surrey, the total number of houses required by them for the working-classes was 9,028; 3,538 houses had since been built by local authorities. Financial assistance had been given under the Housing, Town-Planning, &c., Act, 1919, to the provision, in the administrative county, of 214 houses by public utility societies, and under Section 1 of the Housing (Additional Powers) Act, 1919, to the provision of 2,249 houses. A return obtained in March last, which did not include rural districts outside the Metropolitan Police District, showed that in Surrey 732 new houses of less than £35 annual value had been completed between September 30 and March 31, and 881 houses of five rooms or less were under construction at the latter date.

Cost of Materials.

Captain W. Benn asked the Minister of Health what was the average cost of materials employed in the construction of a house within the limits of size and type laid down in the Housing (No. 2) Bill for the years 1920, 1921, 1922, and at present.

Mr. N. Chamberlain said the prices submitted by local authorities did not distinguish between the cost of labour, materials, overhead charges, &c., and general average costs were not, therefore available. It might, however, be estimated that if the costs of material in a cottage in September, 1920, be taken as 100, the costs at subsequent periods might be compared as follows:—

September, 1920	100.
June, 1921	84.3
March, 1922	64.2
February, 1923	59.1

White Lead Convention.

Mr. A. Greenwood asked the Minister of Labour whether he was aware that the International Materials Committee, representing the Master Painters' Federation of England and Scotland and the Association of Ireland, had declared in favour of the ratification of the White Lead Convention, and that the operatives in the painting trade had also declared themselves in favour of ratification, and whether, in view of the master painters and operatives' unaminity, the Government would notify its intention of ratifying the convention.

Sir M. Barlow said the answer to the first two parts of the question was in the affirmative. As regarded the last part, the question of ratifying the convention was being carefully considered in the light of all the circumstances, and the decision would be announced as soon as practicable.

Concrete Roads.

Mr. D. G. Somerville asked the Parliamentary Secretary to the Ministry of Transport if, in view of the progress now being made in America with concrete roads, he would say whether he had received any official reports showing that the system of construction was satisfactory and economical; and whether, in that case, he proposed to recommend it for general adoption in this country.

Colonel Ashley said he was aware of the wide use of concrete roads in America and of the results claimed. Grants were made from the Road Fund towards the construction in the United Kingdom of concrete roads where circumstances favoured that method, but it was not part of his policy to recommend systems of road construction for general adoption throughout the country.

Land Valuation.

During the Report stage of the Finance Bill the Government stood by the proposal, which had been carried in a "free" division in Committee, to obviate the necessity of sending to the Land Valuation Department particulars of transfers of property. After a prolonged debate, in which both Mr. Lloyd George and Mr. Austen Chamberlain opposed the Government, the proposal was adhered to by 260 votes to 187.—Government majority, 73.

Housing Banks.

Mr. Leach, the Labour Member for one of the Divisions of Bradford, has presented the Local Authorities (Savings and Housing Banks) Bill, which empowers county boroughs and local authorities representative of not less than 150,000 persons to establish and maintain local savings banks. It also provides that the Treasury shall be responsible for the regulations in regard to the conduct of these banks and it also contains powers for the setting up of housing departments to enable a municipality to make advances on mortgage to depositors in order to help them to acquire their own houses. The Bill has been read a first time.

The Rent Bill.

During the discussions of the report stage of the Rent and Mortgage Interest Restrictions Bill, which lasted for two days, chief opposition, from the Government side, at any rate, centred around the proposal to set up Reference Committees to assist the County Court judge in the determination of questions arising under Part II of the Act in relation to the rent, character or condition of a dwelling-house.

Sir Kingsley Wood moved an amendment to delete this proposal, which, he said, had not been asked for by anybody of opinion or any association concerned with the interests of either landlords or tenants, and, so far as he was aware, no County Court judge had expressed a desire for such assistance.

Mr. Pretyman thought it was almost impracticable for the House to be legislating on a state of affairs that could not be foreseen in two years' time.

Mr. N. Chamberlain, in defending the establishment of the reference committees, said he was not unconscious of the fact that the mere suggestion that committees of this kind should be set up might give rise to doubts and fears among the Government supporters lest he should be doing something which might eventually lead to the setting up of permanent Rent Courts. Those doubts and fears had probably been strengthened by observations made by Labour Members during previous discussions. But he would try and meet some of the objections which had been raised. The proposal was bound to be somewhat vague, in view of the changed committees which might exist in 1925. His object was to establish a principle rather than to formulate a detailed proposal. The functions of the Reference Committees were confined either to acting as an advisory committee to the County Court or to acting as arbitrators in cases referred to them by landlords and tenants. He had been impressed with the genuine desire shown on all hands that Parliament should have full control over the regulations, but he thought he already ensured that. Nevertheless, he would accept a proposal of Sir Ryland Adkins to ensure that the regulations made by the Committees should not become operative until both Houses had passed resolutions accepting them.

After this statement, Sir Kingsley Wood withdrew his amendment, and Sir Ryland Adkins' proposal was embodied in the Bill.

G.W.R.'s Housing Schemes.

At the Railwaymen's Conference at Crewe, Mr. C. T. Cramp, industrial secretary of the National Union, as Secretary of the Great Western Railway Council, outlined two schemes which that company is carrying through for the improvement of the housing conditions of their employees. By the first scheme the employees are encouraged to become the owners of their own houses, the companies loaning to them 90 per cent. of the purchase money at 5 per cent. interest, the principal repayable by instalments spread over a period of twenty years. Under the second scheme the company is expending £1,000,000 in the purchase and laying out of land for building and then leasing it to public utility societies for development, the houses to be occupied by Great Western employees.

THE PRICE OF BUILDING MATERIALS.

The Interim Departmental Committee appointed on April 27 last to survey the prices of building materials and "to receive and consider complaints in respect thereof and to report from time to time to the Minister of Health and the President of the Board of Trade as to the facts, and in particular as to the extent to which in any case the price appears to be unduly high by reason of the operation of any trade combination, trust or agreement," has issued its first interim report, dated June 27. The Committee consists of Sir H. J. Mackinder (Chairman), Mr. A. V. Alexander, Sir Theodore Chambers, Sir Charles T. Ruthen, Mr. R. Coppock, Mr. Stephen Easten, Mr. E. R. Eddison, Mr. George Hicks, Mr. J. Stanley Holmes, Mr. W. T. Lancashire, Mr. Cecil B. Levita, Mr. D. Ronald, and Mr. J. Walker Smith, with Mr. T. H. Sheepshanks, of the Ministry of Health, as secretary.

The report states that the Committee has formed its own organisation for the ascertainment of prevalent prices in various parts of the country. The places chosen for this purpose are Birmingham, Bristol, Leeds, Leicester, London, Manchester, Newcastle, Swansea, Dundee, Edinburgh, and Glasgow, and, as typical of rural conditions, the counties of Cambridgeshire, Hampshire and Herefordshire.

The Committee decided that those who can best supply reliable local information are those who buy and sell materials in the district concerned, *e.g.*, builders and contractors on the one hand and the manufacturers and merchants on the other. Local authorities are also large purchasers, under, perhaps, rather special conditions, and there are additional sources of information, such as wholesale co-operative societies, Government departments and public utility societies. The Committee secured the co-operation of the chief technical advisers of the local authorities of the particular areas chosen, who are to avail themselves of all sources of information, and to call to their assistance representative local builders and contractors and local manufacturers and merchants. They have been requested to record actual prices as applicable to various dates in two different forms, namely :—

(1) A record of the prices of the principal materials required in the construction of a workman's house, arranged under 27 heads.

(2) The total cost of these materials in the quantities required for the construction of such a house. (This total will represent fully 95 per cent. of the cost of all the materials required.)

The returns under the second of these heads are not yet ready, but the Committee submits a statement under the first head for the two months, April and June, 1923, in regard to all but one of the chosen localities, in a Schedule to the report. The Committee has selected descriptions of material that are known to be reasonably constant in the various localities and subject to comparable conditions. Except in a few cases, prices recorded are as delivered on rail at some local railway depot. They are not exceptional prices such as might be quoted to specially large buyers or to those who have special advantages and facilities; nor are they such as are paid by small retail or occasional purchasers. They are those available for the average buyer under ordinary commercial conditions and apply to quantities of convenient bulk for trade minimum orders, such as full truck loads or four-ton lots. They are current and ordinary prices and not such as may be influenced by long-period contracts. They are "net" to builders and do not include the profit usually added in compiling tenders and day-work accounts.

The month of April has been included in the first record of prices for the reason that the Minister of Health in that month introduced the new Government Housing Bill.

The Committee proposes in future to present similar tables at monthly intervals. Although the Committee realises that a retrospective record is also called for, it is not yet in a position to present one, and has thought that a statement of present-day prices and those ruling at the time of the introduction of the new housing measure should be reported at the earliest possible moment.

The outstanding features of the Schedule (which we give, in part, on the following page) are: In the first place, there is considerable variation in the prices of locally-produced material; and in the second place, the actual prices, except in the case of light castings, have not at present been subject to general rise since April; although there have been some sporadic rises, there have also been some reductions.

Light Castings.

Dealing with the question of light castings, the report states: "Almost concurrently with our appointment, the National Light Castings Association, which controls the prices of the bulk of the light castings produced in this country, announced an increase of 10 per cent. in the prices of certain goods used in house building. We at once took steps to investigate this matter, and, after preliminary inquiries, appointed a sub-committee to visit Scotland, which is the chief centre of the light castings industry in this country. A long interview with representatives of the Association took place in Glasgow, at which it was stated to us that after careful consideration extending over several months, and after negotiation with the Committee of the distributing merchants, a new and reduced scale of prices had been settled, which took effect on February 1 of this year. We reserve our judgment as to the basis of this February scale and express no opinion in regard to it, because we are still waiting for certain information which has been promised to us and more detailed investigation may be necessary. But there is one observation which we think we may usefully make at once. It so happened that almost simultaneously with the announcement of the February prices, the cost of pig-iron, the raw material of light castings, began to rise. In January, the price of No. 3 Cleveland was 92s. per ton, in February 105s., and in April, when the peak was reached, it was 127s. 6d. Then, on May 1, the Association made an increase of 10 per cent. on the February prices of certain lines of goods. It was, of course, noted at the time that these were the very goods used in building small houses, but we put on record the statement made to us by the Association that this had nothing to do with the announcement in March that the Government were about to give further subsidies for the erection of such houses. We think that it is also our duty to record the fact that the representatives of the Association agreed with us in Glasgow that when the effect of the Ruhr occupation on prices passed away the recent increase ought to be reconsidered. The output of pig-iron in this country has been greatly augmented in the last few weeks and the price of No. 3 Cleveland has already fallen to 115s. a ton. Except in the case of coke, which is not a comparatively large item in the production of light castings, we are not aware that any of the other costs either of manufacture or distribution have increased since February, wages have been stationary and railway rates and national and local taxation have tended downwards. It seems to us, therefore, that by their own showing a reconsideration by the Association of the May increase is almost due."

Bricks.

In reference to the price of bricks, the report says: "We have received certain specific complaints of increase in price, of which the most important refers to South London. These we are investigating. As we have already pointed out, the prices tabulated in the Schedule to this report indicate no general rise of price in the country as between April and June.

"There are, however, certain features of the brick position to which we think it well to call attention. There has been a rapidly increasing demand in London and the South-east during the last few months and there has also been a considerable increase in production. The monthly production of the manufacturers in the Fletton area was 22 million in January, 1922; 20½ million in May, 1922; 23 million in January, 1923; and 33½ million in May, 1923. So far as our information goes, it would not appear that costs of production and distribution have materially increased of late. Coal has increased in price, but on the other hand railway freights have been reduced and also taxation both national and, on the average, local. Moreover, fixed charges can now be spread over a larger turnover. It is probable that in some localities there has been a rise in the price of bricks owing to the withdrawal of the intermittent competition of large producers from a distance. In times when demand is poor, large manufacturers, *e.g.*, the Fletton manufacturers, must go farther afield to find adequate markets. With an increasing demand they naturally tend to restrict sales to their more immediate neighbourhood, although they are, no doubt, willing to make special prices for deliveries at greater distances."

SOUTH WALES MASTER BUILDERS.

At the half-yearly meeting of the South Wales Federation of Building Trades Employers, at the Castle Hotel, Neath, Mr. W. E. Goodridge, Neath (the president), was in the chair. A welcome was extended to the Federation by Mr. S. L. Collins, president of the Neath Master Builders' Association.

An address on the Government housing proposals and scheme of subsidisation was given by Mr. D. Anderson, technical adviser to the Federation, who detailed the advantages arising from the Small Dwellings Acquisition Act. Mr. Anderson was requested, when the final stages of the Government Bill had been completed, to draw up a memorandum of points of interest for circulation to the affiliated members.

A report on the stabilisation of wages until January, 1924, was received.

Later members were entertained at lunch by the Neath Master Builders' Association.

Mr. Collins presided, and the toast of the Federation was proposed by Councillor H. Waring, who expressed appreciation of the Federation's efforts to improve the industry. Mr. Goodridge responded, and appealed for support from all master builders, and Messrs. T. Wilkins (secretary) and D. Anderson also spoke. Mr. Jenkins, Newport, submitted the toast of the Neath Association, and complimented the members on the loyalty for which, he said, they were noted. Mr. Collins responded.

Mr. Jonah Arnold, the architect and agent to the Gnoll Estate, conducted the members round Gnoll House and grounds, which is to be acquired by the Neath Council as a war memorial.

Builders' Sports Meeting.

The second annual sports meeting of the Trocoll Sports Club (Messrs. Trollope & Colls, Ltd.) was held at Grange-lane, College-road, Dulwich, S.E., on Saturday, July 7. Flat and track races and field events went off splendidly, notwithstanding the great heat, and a feature was an "open" relay race in which teams from several well-known London building firms competed. The side-shows were also most successful, particularly an elaborate contrivance known as "The Aerial Flight."

The firm welcomed many of its business friends, and a very happy programme, watched by a crowd of some 1,200 to 1,500 spectators, was brought to a conclusion at about 7 p.m., when the prizes were presented by Mrs. Colls, and a short appropriate speech was delivered by Colonel George H. Trollope, V.D., D.L. In opening the presentation of prizes ceremony, Mrs. Colls was the greatly pleased recipient of a very fine basket of flowers. The band of the 20th Batt. County of London Regiment played throughout the afternoon and evening, and rendered a short impromptu dance programme until dusk.

Abridged from the Report of the Government Committee on the Price of Building Materials.

Prices of Building Materials in April, 1923, and June, 1923. (*See p.* 68.)

THE PLUMBING APPRENTICESHIP SCHEME.

We have received the following from a correspondent :—

The scheme for the training and improvement of the future craftsman in the plumbing trade was initiated by a broad-minded and far-seeing few, who have worked assiduously for some years now. The scheme has been evolved and got into a state which, theoretically, should run easily ; but, practically, it seems at a standstill, with little hope of immediate progress. The aims of the scheme were approved and assisted by employers' associations and employees, yet there seems little fruit for those united efforts, particularly in London, although in many industrial towns progress is being made. Why is this stagnation ?

In London the masters are often inexperienced in the training of apprentices ; for years it has been a "plumber and mate." In many good-class shops there seems to be an impression that the apprentice does not pay. This may be true with some types of boys, but with the right type the reverse will be proved. To meet this the writer would suggest that each boy be taken on three months' trial before he is indentured.

There are a few good firms prepared to take apprentices, but are unable to do so owing to the fact that they have the full complement of apprentices in ratio to the number of men regularly employed. The result of this is that, with four plumbers regularly engaged, one apprentice only and three mates are employed. From this method of working the probabilities are that ultimately we get, say, at the end of five to eight years, three plumbers—one apprentice, and two of the mates. In hundreds of shops there are no *bona-fide* apprentices, but plenty of mates. What becomes of these mates ? Are they content to remain as mates ? Certainly not ! Seventy-five per cent. eventually blossom out into craftsmen of a sort ; the type content to work at 1d. or 2d. below the rate, and who do the shoddy kind of work which is so frequently produced.

As a possible solution to this—or, at any rate, a means to a laudable end—is, take the limitation of number of apprentices to men on broader lines for a few years instead of endeavouring to limit the number of apprentices in certain shops. Apply the system to the embryo plumbers in the mate stage. The writer has no statistics to work upon ; but if, for instance, there are 2,000 plumbers, union and non-union members, engaged in a town, allow, say, one to five=400 indentured apprentices in that town, irrespective of the members employed at one shop. It seems the only way to make any immediate progress. When, say, at the end of seven years, if the number of apprentices for the whole town is near the correct proportions as fixed by the trade unions or other bodies, then, and then only, take steps to equalise the numbers in the respective firms. Every thinking man knows that there must be limitations as to numbers, but he also knows that in nature's law the need is met and regulated by demand to a great extent. At the present stage there seems no possible likelihood, in London anyway, of creating a supply of properly trained craftsmen over and above the demand. In fact, if the matter is not tackled on the broader basis as above suggested, there will be the continuous dearth of such, with its evil consequences on the trade.

It has been arranged that indentured apprentices shall attend a training school for two half-days per week for a term of two years. This seems to be a big stumbling-block. The masters state that they cannot afford to pay the boys during those periods in which they are attending classes. Again, it is a matter of taking the broader outlook. Time spent in training will be an investment for increased production in later years of the apprenticeship. Many towns and many trades have been working the system quite successfully for a number of years. The healthy state of such trades and the gradual growth of the classes is a proof that they are working on the right lines. Admittedly it is more difficult in the plumbing trade to allow the boys this time. To meet the case for firms whose work is chiefly repairs, alterations, &c., there are the technical schools where the boys are trained for the trade direct from the elementary school. These boys, having spent from two to three years in the technical school, will not be required to attend such day time classes, and their specialised practice in the technical school will put them on the way to become sound and conscientious craftsmen ; and now, having endeavoured to clear the way, why not give the scheme a trial ? There is no risk and no ultimate hardship on any who are craftsmen and have the well-being of their trade at heart.

PLASTERERS AND SLATING WORK.

A correspondent, writing in a recent issue of the *South Wales Daily News*, says :—

"Shall a trade unionist who has served his apprenticeship at his trade be allowed to follow that trade wheresoever he has a mind to do so ? The Cardiff Branch of the Plasterers' Society, backed up by the Cardiff Joint Industrial Council of Building Trade Employers and Employees, says, 'No ; not in Cardiff.'

"Some few months ago a Cardiff shipowner decided to build a residence at Radyr, and through his architects placed a contract for the main part of the building with a responsible firm of contractors. But as he required his roof to be slated in a special manner—a manner which is quite an innovation in the Cardiff district, and which is the work of specialists—he placed a separate contract for this work with a very old-established firm of slating contractors, whose workmen have the requisite experience and skill to carry out the work satisfactorily. This firm belongs to the National Federation of Building Trade Employers and holds membership in the South Wales Building Trades Employers' Federation, and has carried out slating contracts in South Wales for the past 40 years.

"The slaters employed by them are members of the Amalgamated Slaters' and Tilers' Society, which is one of the integral parts of the South Wales and Monmouthshire Building Trades Council, and they work under rules and regulations laid down by their society. But when these slaters commenced to carry out the slating at Radyr, the Plasterers' Society at once threatened to withdraw their men from this contract, and also from all other contracts being carried out by the same building contractor, unless the slaters were stopped working—at their own trade !—at Radyr. This threat materialised, but the plasterers ultimately returned to the other contracts on the instructions of the local joint council. The plasterers claim that they, and they only, shall do all slating and tiling work in the Cardiff area, and, despite the fact that there are insufficient plasterers in the district for the work in progress, they deny the slater the right to work there at his own trade. They base their claim on an old and carelessly-worded demarcation award, which was given in settling a dispute between themselves and the bricklayers. It is interesting to note that their fellow trade unionists—the slaters—were not represented, or considered, when this award was made.

"Surely the main object of trade unionism is to secure fair and equitable treatment for all trade unionists. But it is very evident that the Plasterers' Society wishes to overlook this principle, and to use its greater numerical strength to prevent the smaller Slaters' Society from carrying on in the manner to which it is logically entitled. And, again, their action is backed up by the 'chosen' of the local master builders. This sort of tyrannical treatment by the Plasterers' Society is sure to reap its own reward, and it is pleasing to note that several materials have been recently placed on the market which now enable us to build houses entirely and satisfactorily without the aid of a single plasterer."

LAW REPORTS.

Tiles for a Bungalow.

In Shoreditch County Court, Messrs. J. J. Etridge, junr., Ltd., of Hollybush-place, Bethnal Green, sued Messrs. Field & Son, of Old-road, Clacton, builders, to recover £19 11s. 7d. Mr. J. P. Eddy appeared for the plaintiffs, and Mr. Ball, barrister, for the defence.

Counsel said plaintiffs carried out work for the defendants, fixing tiles at a bungalow, and there was a surplus to the value of what was claimed, and the whole point at issue was whether the tiles belonged to the plaintiffs or the defendants. In the first place the defendants agreed to purchase a quantity of tiles for which the plaintiffs had quoted, but almost directly after defendants said their bricklayers were busy, and asked plaintiffs to quote for carrying out the work. They did quote an inclusive price for the tiles and the work, and on that agreement it was stated that all surplus goods were to be taken over by the defendants, or put on rail free. Counsel said his submission was that this second agreement entirely did away with the first, and plaintiffs were only to use the tiles which they had supplied and which were on the job and to charge up the surplus.

The defendants, on the other hand, claimed that they had already purchased the tiles, and the second price given them only added on the cost of putting down the tiles, plus the cost of the tiles, inclusive. The quotation was for £100 17s. 6d., which included material and labour.

Mr. Eddy said he was prepared to admit the price was inclusive, but they were to have the surplus material.

Mr. Henry Hubert Ford, a director of the plaintiff company, gave formal evidence as to the transaction.

Judge Cluer found for defendants with costs, and remarked that the case ought never to have been brought—it was too simple.

Acquisition of Strand Premises.

Mr. Howard Martin, Official Arbitrator, has issued his award in a claim against the London County Council, regarding the Council's compulsory acquisition of the house, shop and premises, 73, Strand. The claimants are named as Ronald Willie Gandar-Dower, Alan Vincent Gandar-Dower, and Emily Mary Gandar, trustees of the will of Thomas Fever Gandar (deceased), and Ronald Willie Gandar-Dower and Amelia Frances Gandar-Dower.

The award is as follows : "That the Acquiring Authority is to pay the claimants the sum of £21,000 as compensation as from December 13, 1921, the date of the notice to treat ; all questions of rent and interest to be adjusted by the parties as matters of account in the settlement ; and I order the claimants to pay the costs of the Acquiring Authority."

"THE BUILDER" COST OF BUILDING COMPETITION—No. 2.

A selection of nearly forty plans, elevations, and details, from about 300 designs submitted in Competition No. 1 (open to architects only), including the designs which won the £75 prize for class "A" (houses with three bedrooms and parlour), and class "B" (houses with four bedrooms and two sitting-rooms), have now been published in book form (London : *The Builder*, 4, Catherine-street, W.C.2, price 2s. 6d. net.)

Builder's Will.

The late Mr. Richard James Matthias, J.P., of the Garth, Merthyr-road, Pontypridd, builder and contractor, who died on May 11, left £48,093 (net personality of £46,444).

NEW BUILDINGS IN LONDON.

Bloomsbury. — Alterations.—The British Medical Association has purchased the Theosophical College in Tavistock-place, Bloomsbury, on building which it is understood more than £100,000 was spent up to the suspension of work early in the war. The building, which contains three large halls, has a floor area of 58,000 square feet.

Westminster Bridge.—Subway.—The L.C.C. is considering the construction of a subway under the Victoria Embankment at the corner of Westminster Bridge.

Ludgate Hill.—Extensions.—The building operations being carried out in London House-yard consist of an extension to the premises of Messrs. J. Spence & Co., Ltd., on the site of an old City public house named "The Rose and Crown." The builders are Messrs. John Greenwood, Ltd., of 12–14, Arthur-street, London Bridge, E.C.4.

New Oxford-street.—Alterations.—Premises at 28, New Oxford-street have been altered by Runham Brown Bros., 109, Downs-road, Clapton, for a branch of Messrs. Barclays Bank. The stucco work is by Messrs. Gilbert Seale & Son, Ltd., 22, Lomond-grove, S.E.5, and the steel sashes are by Crittall's, of Holborn. Mr. D. G. Marsh, of 38, Chancery-lane, W.C.2, is the architect.

Euston-road. — Reconstruction. — Premises at Nos. 231–233, Euston-road, N.W., are being reconstructed by Messrs. Hall, Beddall & Co., Ltd., under the direction of Mr. C. J. Mole, M.B.E., F.R.I.B.A., for Messrs. R. Simmonds & Son. Constructional steelwork is being executed by Messrs. Young & Co.

NEW BUILDINGS IN SCOTLAND.

Cambuslang.—Clubhouse.—Efforts are being made to raise £200 to erect a clubhouse in connection with Cambuslang Parish Church, at Greenlees-road.

Edinburgh. — Zoology Department. — The University Court has received a gift of £20,000 to start a fund for a new department of zoology. The giver expressed the hope that the department would be erected in the near future.

Brechin.—Masonic Hall.—Plans for a new hall for the St. Ninian's Lodge of Freemasons have been passed by the Dean of Guild Court.

Paisley.—Houses.—The Dean of Guild Court has passed plans submitted by Mr. Malcolm Macfarlane, joiner and timber merchant, Wallneuk Sawmills, for a self-contained house at Gartmore-road; for Wm. MacKean, Ltd., for a bungalow in Greenock-road; and for Mrs. Mary Amelia Miller, Miami, Fort Matilda-place, Greenock, for a bungalow in Kingsburgh-drive.

Markinch.—Painting Town Hall.—The Town Council has decided to clean and paint the inside of the Town Hall and the outside woodwork of the Municipal Buildings.

Greenock.—Fire Station.—The Town Council is considering the advisability of providing a new fire station, equipped with modern appliances, for the town.

Forres.—Co-operative Society Premises.—The Dean of Guild Court is considering plans for new buildings in Academy-lane for the Scottish Co-operative Wholesale Society.

Coatbridge.—Houses.—The T.C. propose to obtain tenders for 50 new houses at Cliftonville. Plans have been passed for three shops at the Old Smithy and vacant piece of ground in Bank-street, for Provost Kirk, estimated to cost £600.

Dundee.—Houses.—Sketch plans were submitted to the Corporation Housing Committee for 102 tenement houses, which it is proposed to erect on Dudhope Estate, to the west of Gardiner-street. The plans were remitted to a sub-committee. The following plans were submitted to the Corporation Works Committee for approval: Arbroath-road, cottage for the Trustees of Craigie Estate; Kerrington-crescent, Barnhill, villas for A. Thomson; Park-road, house for W. Clark; Raglan-street, workers' club, for Caird's (Dundee), Ltd.

RATES OF WAGES IN THE BUILDING TRADE.

The following are the rates of wages in the building trade in England and Wales. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur :—

(For rates of wages in the Building Trade in Scotland, see page 72.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING AND PAINTING.

JULY 14.—**Grimsby.**—CONSTITUTIONAL CLUB.—The Committee invite tenders for the erection of new premises in Victoria-street. Mr. William Wells, Licentiate R.I.B.A., architect, Prudential Chambers, Victoria-street, Grimsby.

Butler, for Miss Hill; garage, "Lyndale," Marine-parade, for E. E. Bivand; house, St. Wilfred's-road, Smith, Bartlett & Co., for E. J. Jones.

FIRES.

Exeter.—An extensive fire has destroyed the City Roller Mills, belonging to Mr. C. H. Knapman, and the City Mills adjoining, owned by Mr. R. Upright.

Galashiels.—A large portion of Buckholmside Skin Works, Galashiels, has been burnt down, the damage being estimated at £68,000.

MODERN SCAFFOLDING.

The well-thought-out organisation and the use of modern appliances and labour-saving devices which make possible the rapidity with which buildings are erected nowadays are well exemplified in the description and illustrations given in our last issue of the new warehouse recently completed in Stamford-street, S.E., to the designs of Messrs. Bromley & Watkins, FF.R.I.B.A. The building is of the type now commonly adopted for commercial purposes, namely, steel-frame construction, and speed and economy were both effected by the use of machines for mixing the concrete, chuting plant, and steel forms. Another feature in connection with this contract was the entire absence of external scaffolding of any description—the steel forms being set up in position and all other necessary work to the exterior of the building being done by men operating from travelling cradles which were suspended by ropes from a rail projecting from the roof steelwork. The track was hung in duplicate, so that it was possible to place the concrete into the forms from one cradle whilst another cradle was occupied by the men engaged on finishing the face of the concrete with cement wash. A special feature of this travelling cradle system, which is patented and owned by Messrs Stephens & Carter, Ltd., of Paddington Green, W.2, is that one cradle can operate along any length of frontage, and by using suitable lengths of track the cradles can negotiate curved or irregular frontages as easily as straight wall surfaces.

Among the many recent contracts carried out with these cradles (the "Spencer" travelling cradle) may be mentioned the redecoration of the Charing Cross Hotel, illustrated on this page. On this building the entire frontage, with a length of 160 ft., was reached with two cradles only.

Redecoration of Charing Cross Hotel.

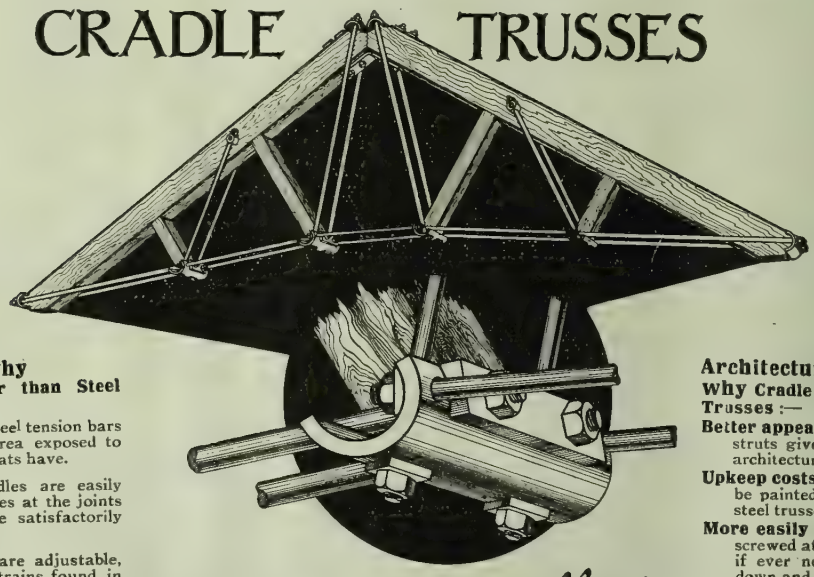
TRADE NEWS.

Midgley U.D.C. (surveyor, Mr. Robert Laycock) has placed the reconstruction and resurfacing of Luddenden-lane in the hands of Messrs. William Shepherd & Sons, Ltd., Milkstone, Rochdale.

Messrs. Wood, Russell & Co., of 34, Oxford-street, London, W.1, have designed and produced a small coke crusher for domestic use.

It is claimed that the appliance will reduce 36 lbs. of ordinary broken coke to fuel of the proper size for domestic boilers in a quarter-of-an-hour. The illustration shows the crusher working.



Drummond Brothers, Ltd., of Guildford, have issued a leaflet illustrating and describing their new Diaphragm Pumping Outfit. The power unit is one of their "Willing Worker" 3 B.H.P. paraffin engines, and the pump is claimed to combine the largest output with the smallest upkeep.

Mr. W. H. Cooper, builder and contractor, of 182, Hammersmith-road, informs us that for purposes of concentration, enlargement of offices, and his son's entry into the business, the style and address of his firm is changed to W. H. Cooper & Son, Latymer Works, 201, Hammersmith-road, W. 6. (Telephone: Hammersmith, 1323.)

With reference to Messrs. Boots' warehouse, Stamford-street, S.E., described and illustrated in last week's *Builder*, the steel sashes were supplied by Haywards, Ltd., of Union-street, Southwark, S.E., in accordance with the special requirements of Messrs. Bromley & Watkins, the architects. There are several points of special interest about the steel windows. Some of the openings are fitted with sets of louvres, whilst others have three vents interconnected to allow of fixing open to varying degrees for ventilation on staircases, &c., and were in this case fixed to the amount of opening shown, and with some overlap. Other windows are fitted with horizontally pivoted vents connected together in pairs, easily controlled to various positions by the girl-workers, with a very simple form of fool-proof gearing. A certain number of the windows on each floor are fitted with side-hung opening portions for use in case of fire, in accordance with L.C.C. regulations.

Berties, of 34, Hanway-street, Oxford-street, W., have just completed extensive alterations at the Victory Cafe, previously known as the Cafe d'Europe, Leicester-square. The N.S.P.C.C. have purchased the property and leased a portion of the ground floor and basement, which has been fitted up as a restaurant and soda fountain bar.

CRADLE TRUSSES

Structural reasons why Cradle Trusses are better than Steel Trusses:—

Double the life. The round steel tension bars have less than half the area exposed to corrosion that angles and flats have.

Much safer. The open cradles are easily painted. The narrow spaces at the joints on steel trusses cannot be satisfactorily painted.

No initial strains. All joints are adjustable, thus avoiding the initial strains found in riveted joints.

Greater lateral rigidity. The tension bars are all in pairs, set wide apart, thus giving more lateral rigidity than single flats, tees, etc.

Stronger. Timber is more efficient for compression members than steel, and steel is more efficient for tension than timber. The steel cradle, in overcoming the difficulty of joining these materials, has made the cradle truss the most efficient principal ever manufactured, being 30% stronger than steel trusses of equal weight,

Cradle Trusses can be supplied for all classes of work from 15 ft. to 80 ft. span, either complete or steelwork only.

A few agencies still open in the larger towns in the E. and S.W. Counties to firms with connections.

Solve corrosion problems

The unpaintable joints on steel trusses have for years been a problem to those who know how soon light steel scantlings become dangerously corroded if not periodically painted. As a structural engineer the inventor set himself to study this difficulty. We are pleased to be able to say, with confidence, that he has solved this problem and others besides, in designing the cradle truss. We explain clearly in adjoining column why the materials used are chosen. Timber was deliberately chosen in preference to steel for the compression members, although steel was equally available—the patent covering an all steel cradle truss. Large numbers of cradle trusses have been used during the past three years by well-known Architects for important public buildings, works, etc.

Architectural and other reasons why Cradle Trusses are better than Steel Trusses:—

Better appearance. The timber rafters and struts give a more substantial and solid architectural effect.

Upkeep costs less. The area of steelwork to be painted is only about one-third that of steel trusses.

More easily dismantled. The steel bars are screwed at the joints—no rivets—therefore, if ever necessary, could be readily taken down and re-erected elsewhere.

Covering easier to fix. The purlins, etc., can be more easily fixed in any position along rafter.

Better for transport. All members can be taken apart and packed in small bundles. Shipments abroad have all arrived undamaged.

Safer in fire. Heavy section timbers fare better and are only charred by fires that distort and often bring down steel trusses. To prevent their being a possible source of fire it is a simple matter to treat with fire-proof paint.

Although Cradle Trusses are the best trusses made, you can obtain them, thanks to mass production, at competitive prices. Write now for quotation and full details to suit your job.

HOUSING CONFERENCE AT STOKE.

A conference was held at Stoke recently between representatives of the Stoke-on-Trent Corporation and builders regarding the erection of houses by private enterprise in the Potteries, under the provisions of the new Housing Bill.

Alderman W. T. Leason, chairman of the Housing Committee, who presided, said the Corporation were most anxious that the builders should undertake the erection of houses in the Potteries, and, with that object in view, they had decided to increase the maximum Government subsidy of £78 per house to a maximum of £100 for approved houses. The subsidy would be paid in a lump sum as soon as each house was completed.

The Borough Surveyor explained that the Government desired that houses should vary from twelve to twenty to the acre.

The Chairman said he personally had seen quite suitable houses erected near Doncaster at a cost of £315 each.

Mr. Paul Pemberton, President of the North Staffordshire Master Builders' Federation, said a good serviceable house of the type demanded by the Bill could not be built at a cost of £300. A house of the twelve to the acre type, with a bath-room, would cost at least £500.

The Mayor said he hoped that the £100 subsidy would not pass into the hands of unscrupulous builders, who would build houses which would "just pass muster," and put the £100 in their pockets after having made a substantial profit in addition. That was not the intention of the Government. He hoped the Corporation officials would take care that the houses were built to a good specification.

Mr. Pemberton took exception to some of the Mayor's remarks, and said the builders of North Staffordshire did not require a subsidy. The subsidy, in fact, was being granted not to the builders, but to the building of houses, which was a very different thing. The £100 was not to subsidise the builders, but to subsidise the people who were going to buy the houses.

Alderman W. E. Robinson outlined an interesting scheme placed before a public meeting at Burslem. It was suggested that houses should be built by private enterprise at a cost of £450 each. Each prospective purchaser would be asked to deposit £50 in cash, and having received the £100 subsidy, it was suggested that the balance of £300 should be borrowed from a building society. This loan could be repaid in 18½ years, at the rate of about 10s. a week, at the end of which time the borrower would be the owner of his own house. He had made inquiries of the building societies, who were prepared to advance money on these terms. That was quite a feasible scheme, and when put before a public meeting at Burslem, about 40 persons immediately signified their willingness to deposit the £50.

Mr. Pemberton replied that the builders were not so much concerned about who paid the subsidy, so long as they received a fair return on their capital. He believed Alderman Robinson's scheme could be put into practice.

It was decided that the matter should be considered by the Builders' Federation, and that a deputation should meet the Housing Committee and report progress.

Town-Planning in the Midlands.

As the result of a conference in Birmingham of representatives of the city, the boroughs of Coventry, Dudley, Smethwick, Walsall, West Bromwich, Wolverhampton, Worcester, Bewdley, Droitwich, Kidderminster, Lichfield, Nuneaton, Leamington, Stourbridge, Stratford-on-Avon, Sutton Coldfield, Warwick and Wednesbury, and of the various urban and rural district councils within a radius of about 25 miles of Birmingham, it was decided to form a Midlands Joint Town-Planning Advisory Committee. Mr. F. H. C. Wiltshire (Town Clerk of Birmingham) consented to act as hon. secretary *pro tem.*

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXV.—No. 4198. JULY 20, 1923

ABOUT MANY THINGS.

IN our leading article for June 8 we observed that "we cannot assume that the architect shares with the workman the fatalistic platitude that buildings must be built, or, in the parlance of economics, that articles must be consumed regardless of cost." A correspondent, whose letter we published, considered this comment to be rhetorical, believing that the fallacy does not exist. We wish that his view was correct, and that we were wrong; but we can assure him that our view was at least no idle comment, but a sincere expression of opinion.

The sentence in question opens up a wide discussion upon certain economic truths and fallacies, but the difficulty is the old one, of proving the connection to the satisfaction of unbelievers. However, we owe it to our correspondent to say that a few months ago the whole problem was discussed in these columns in connection with the question of the proposed reduction of wages in the building industry. It appeared to us—as it must have appeared to everyone—that the lowering of wages to stimulate the amount or volume of building work was not accepted as an economic theory by the workmen or their leaders. There are certain industries in the country which have been paying wages on a scale much higher than pre-war, and the workers have been working half-time. Needless to say, there was much unemployment and bad trade, and it needs no knowledge of economics to realise the absurdity of any theory which both increases the cost of the commodity and gives no security of employment to the worker. Our comments were based upon considerations such as these, and it is still difficult for us to believe that we have all abandoned the theory that it is possible to command both the price and the consumer. We did not wish to suggest that architects should take a prominent part in the settlement of technical matters between the builder and his workmen; we indicated that the cost of a building was a dominating factor and that consequently the architect, on behalf of his client, should be in a position to state the difficulties curtailing or hindering his building schemes. Advice of this nature from a responsible source would be invaluable to masters and workmen in their deliberations, and we believe would be welcomed.

It is evident, judging from the correspondence we receive, that what might be termed the frontiers of architecture are presenting many embarrassing problems at the moment. They involve questions of cost, legal difficulties with land restrictions, by-laws, housing, increases in municipal rating, taxation and assessments, and the high costs of street and roads for heavy motor traffic.

It is now becoming fairly clear that in making laws for the housing of the workers we have apparently failed to make provision for the middle classes, who ask for the same facilities and conditions. We have never been convinced that the lessons of the Government housing schemes were safeguarded for the individual; the idea of communal housing schemes has become an obsession and the privilege of paying for a house seems to be the only reward. Private enterprise, as opposed to State housing, has a different meaning when applied to the individual who desires to build his own house. We grant that the busy designer might say that he has sufficient work attending to architectural matters, and that in any case he has no taste for purely business affairs. As an individual he is perfectly justified in maintaining this attitude, but taking the architectural profession as a whole, we doubt if it could be seriously argued that these matters can be neglected. If architecture suffers (as is frequently contended) from the corroding influences of everyday life, it would seem that the younger architects have nothing to gain if their profession were brought into touch with the immediate problems of the day. If this exclusive view is held the architect should not grumble if his scope is limited, and we feel he should expect a reply in the spirit of Talleyrand's answer to the man who said he had to live: "I do not see the necessity."

It is possible to be as completely isolated as a Trappist monk and be able to execute certain forms of creative work; it may even be necessary for an architect to be free for a time from interruptions or dependence on other people's arrangements, but few will deny that it is necessary for him to maintain contact with human life, its ideals and its follies. The complete detachment of the philosopher is a necessary attitude in any architectural training, but the approaches to present-day architecture seem to the student to lead through a maze of human foibles, and the directions are uncharted. The translation of the architect's ideas into building necessitates a large amount of process work and intimate dealings with a huge and highly specialised industry. Either directly or indirectly through his partner or surveyor, the architect is ultimately compelled to realise what is commonly termed the "practical side" of his work. That there are ideal partnerships amongst architects is certain, and, speaking generally, architects contrive in various ways to satisfy their clients that their work is being conducted on sound business lines.

We are convinced that the architectural profession should take the lead in many matters relating to the problems incidental to all building work, and it has been suggested that this work should be done by a permanent board acting in a judicial capacity for and in the interests of the whole profession. Administrative work is distasteful to many architects and, it is argued, they would be glad to have the backing of a "sleeping partner." There are many things to be done and they cannot be relegated to the spare time of busy men who, as it is, sacrifice much of their valuable time on behalf of their profession. We are aware that the conception of an architect which many people hold may be merely the limitations of popular thought, but it is none the less a danger. The work which is lost to architects is, we believe, so much loss to the community. No sacrifice of principle is involved by broadening the conception and scope of architecture, and we bear in mind all the perfections which John Shute considered were essential for the "Perfecte Architecte."

If our point of view seems to be one-sided, we would ask anyone to take a tour through the country and see the new houses and bungalows which are being built. We should be surprised if he did not, despite the many excellent designs which have been provided, consider the standard of design to be uncommonly low on the whole, notwithstanding the time and attention which has been devoted recently to the design of small houses and bungalows. Many of these new erections are situated in delightful parts of the country, and to say the least they are not happy. With larger gardens than we have been accustomed to see in the past, they provoke the reflection of a correspondent that "until powers are obtained to protect us, we would almost prefer to have the houses huddled together again to leave us so much more of the countryside undesecrated." It is certain that the great majority of them are not the work of architects, and it would be idle to pretend that this omission is one of the results of the high cost of building. His economic value to the speculative builder in pre-war days was never seriously entertained, and the unfortunate fact remains that any architectural student could vastly improve the plans and probably reduce the cost considerably. Protests and grumbling will not help matters, and the creation of informed public opinion is too slow a process. The only remedy seems to be to press for protective clauses, and the impetus must come from the architectural profession.

We have roughly outlined some weaknesses and the penalties which the architectural profession and the public are paying. The registration of architects would solve some of the difficulties, but even then, in fairness to the public, it must be safeguarded by an administrative body which would understand every aspect of our practical needs. Meantime, the problems are with us, and if there is a feeling that architects must continue as in the past there is nothing more to be said.

NOTES.

War Memorial Design.

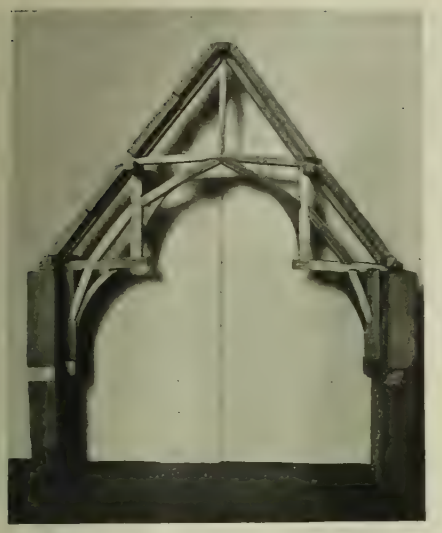
That the design of our war memorials is the choice of the typical Englishman we very much doubt, and in this respect we venture to think may be found a flaw in the argument of Mr. Paul Waterhouse, in the *Observer*, where he rather takes for granted that our war memorial designs represent the typical English taste and character. The way in which war memorials are obtained and designed leaves this much in doubt. No doubt the picture is preferred to the convention and picturesqueness is more appreciated than decorativeness by the average person; but the influences which are brought to bear in the choice of a war memorial design surely do not represent the choice of the average man. Between the naturalistic figure of Nurse Cavell and the purely decorative form of the Cenotaph, there is a world of difference, but whilst we may share the doubts of Mr. Waterhouse as to the mixture of the natural and the conventional in the Nurse Cavell memorial, we must admit the chance it provides to catch the public appreciation in two ways. Sir George Frampton has done some fine work in that memorial, though we think it suffers from over-statement, and in that respect by comparison with the fine reserve in the Cenotaph. Do any of our war memorials really reflect the special temperament of the average Englishman? It will probably be a long time before we improve on the Crimean War Memorial in Waterloo-place. The question arises whether we get the art we deserve or even the art we desire. Obviously, we get the laws we deserve if our electoral arrangements have any value.

The R.A.F. Memorial, Victoria Embankment.

Sir Reginald Blomfield, R.A., Architect; Mr. Reid Dick, Sculptor.

[Situated on the Victoria Embankment, midway between Westminster and Charing Cross Bridges, the Royal Air Force Memorial was unveiled on Monday by the Prince of Wales. Sir Reginald Blomfield, R.A., F.R.I.B.A., was the architect, and Mr. Reid Dick the sculptor. The lofty pylon of Portland stone is surmounted by a great bronze eagle weighing just over four tons. The eagle was cast by Mr. E. J. Parlanti, The Art Bronze Foundry, West Kensington.]

The Piccadilly Fountain



Whether Alfred Gilbert's fine fountain at Piccadilly Circus is the most suitable design for such a site or not, it is surely desirable to make the best of it, and this will not be done by cutting down the island space on which it stands, as is now proposed. If it were elevated some five feet more above its surroundings and had a good setting of terrace and steps the effect would be greatly enhanced; for it has a definite quality of dignity underlying its elaborate detail. Had there been found an adequate site where the sculptor's original idea could have been fully realised this fountain would have been a beautiful sight, with its water display crowned by a central jet of water holding aloft a ball of crystal glass. During the recent weather a good fountain display blown freely over the surrounding pavement might have been welcomed, and even the flower girls might have cheerfully sat in the wet.

The Birmingham Civic Society.

Our municipalities are so continually increasing their responsibilities and duties that we cannot wonder there should be a call for outside effort to deal with the amenities of town life. One of the most successful of these is the Birmingham Civic Society, the report of which, for the last year ending in June, being now before us. We have had the pleasure of commenting on the work of the Society for five years past, and now have to note the completion of the first year's existence of the Birmingham Advisory Art Committee. It is a happy augury for the future that this Committee and the Society appear to have the full sympathy of the City Corporation, whose generous spirit of co-operation is fittingly acknowledged in this report. The gold medal for 1923 was awarded to Mr. W. H. Bidlake, M.A., F.R.I.B.A., as a mark of high appreciation of his services to art. For nearly thirty years Mr. Bidlake has exercised a growing influence upon the architecture of the city, not only by the buildings that have been erected to his design, but even more by the inspiration of his teaching, and by the generous encouragement and guidance which he has given without stint to the younger generation of architects.

A Civic Garden Dell.

Amongst the latest activities of the Society is the Dell in the Muntz Park, which was opened on June 27, and we give illustrations on pages 88 and 89. The Dell has been transformed, whilst preserving its natural charm, into a delightful open-air amphitheatre. In the centre is a paved dancing area surrounding a large flower-bed. Above the grass-

Model of Westminster Hall. (*See page* 87).
Fig. 1. All main timbers represented by loose blocks.

covered lower slopes are a footpath and two rows of seats extending more than half round the circle; beyond these seats is a broad gravel path, and behind this the steep banks of the Dell planted with shrubs. All round the Dell are fine, wide-spreading trees. Facing the middle of the amphitheatre is a raised paved platform, and in front of this there is provision made for erecting a maypole. The platform has a superb setting of trees, and in the background there is another dais, with six steps leading to it, which can be utilised as a bandstand. Altogether, the Muntz Park Dell, when it is completed, will have a most charming sylvan setting, and its natural beauty will be enhanced a hundredfold by the changes which have been so cleverly wrought.

Westminster Hall.

The repairs which have been carried out to Westminster Hall roof afforded opportunities for the minute study of the old structure. Every detail of interest has been recorded in the measured drawings and sketches preserved by H.M. Office of Works. A beautiful wall arcade which formed part of the original Norman Hall was traced in the east and west side walls of the building as described in an article by Mr. William Harvey, illustrated by drawings lent by H.M. Office of Works, which appeared in our issue of January 5 last. Other articles dealing with the great size of the timbers and the problem of searching for and selecting them, and the possible genesis of the design of the "new" roof of Richard II's time by adaptation from the pattern of the Norman roof which had preceded it, appeared in our issue of September 23, 1921. Mr. Harvey's analysis of the compressive and balancing functions of the roof-timbers by means of a collapsible model composed of loose oak blocks was first published in our issue of October 7, 1921. This original design illustrated the practices of mediæval structural mechanics so clearly that we give photographs of the model on this and other pages. The Hall was reopened by the King, who was accompanied by the Queen, on Tuesday.

Sir Joshua Reynolds.

There is something very agreeable in commemorating our great progenitors in the fine arts, and the present bicentenary tribute to Sir Joshua Reynolds serves to remind us of the great contribution which our own countrymen have made to the arts; and the triumphs of the English School should encourage a greater esteem for our own traditions. For it is not only as a painter but as a man that we acknowledge the gifts of both Reynolds and Gainsborough, and though it is a fashion with some critics to place their art in unfavourable comparison with such artists as Franz Hals or Velasquez, we regard such criticism as mistaken—for the former of these two artists, bold and swashbuckling as is his art, is far less comprehensive in his scope and resources in that his technique assails us with an over-assertive emphasis. Acrobatic rather than poetic in its attributes, his treatment is less concealed by art. It is no Little Englandism which admonishes us at this time to build on our own native tradition, the example of which is so salutary and sufficient, developing our own characteristics rather than shaping our art by Continental examples. We have a pure fount of painting undefiled in the art of the eighteenth century from which to draw example, one which, as we study it, reveals to us the high dignity and self-esteem of the men of that time, and the "steady self-centred course" with which they pursued their vocation.

The Artist's Security.

Mr. Charles Ricketts, himself an admirable painter, points out in a contemporary, in writing of Sir Joshua, how "the jealous guarding of the privacy of his working hours has caused irritation among sundry critics"—and in doing so touches on a matter which is of importance to our own time. It is very much to be doubted, for architect or painter, whether the dividing up of their time by all sorts of distractions, under the guise of committees, meetings and artistic propaganda, is at all good for their art—and that the constant calls of too many public occasions act very detrimentally on their activity. As the writer says, in speaking of Reynolds, "To his friends—the elite of his generation—he was the great Sir Joshua, to some lesser contemporaries he seemed too impassive—too aloof." This is a charge often brought against the few whose modesty governs the close adherence to their working hours. And the danger of this over diffusion of activity in the craftsman is very apparent now, when he is called from the proper conduct of his work in so many ways. If the demands which his art makes upon him leave him suspect of exclusiveness by his lesser contemporaries, as too much aloof, he may take heart from the example of such men as Sir Joshua. It is most desirable that an artist should detach himself from so much machinery, and he will do so when he believes more in art. For it cannot be of advantage if, as the result of so much organisation for art, art itself should suffer, yet such is the case. We write this in no way to underestimate those public claims on his citizenship that an artist must acknowledge no less than others, nor do we, in deprecating entangling claims on his activity; but he cannot be in Paris and Rome at the same time, and should therefore respect the need of that privacy, that withdrawness, which is the only soil in which his great vocation can grow. We hear much in these days from those who are not directly artists about "sustaining high standards," but if they are to be sustained in art it is the artist who must sustain them, and they are best sustained by undivided devotion to his work.

The R.A.F. Memorial.

GENERAL NEWS.

Professional Announcements.

Mr. Martin Briggs, F.R.I.B.A., having been appointed one of H.M. Inspectors of Technical Schools, has resigned his lectureship at University College, London, and is retiring from private practice. From July 20 his address will be 9, Winterstoke-gardens, Mill Hill, N.W.7.

Mr. Harold A. Rolls, architect and surveyor, has commenced practice at 31, High-street, Leighton Buzzard, and will be pleased to receive catalogues, &c.

Mr. J. T. R. Wildman, F.S.I., quantity surveyor, has removed to offices at Triumph House, 189, Regent-street, W.1.

Since his demobilisation in 1919, Mr. Lewis John, of Llantrithyd, near Cowbridge, who has been studying architecture at Liverpool, has obtained the diploma A.R.I.B.A., and this year the degree of Bachelor of Architecture, with first-class honours. Also a prize for the best set of constructional drawings.

The Price of Bricks.

It is reported that an offer from a Belgian firm to supply bricks for about 50s. a 1,000 was made to the Parks Committee of Folkestone Town Council. The committee recommended that if the sample of the Belgian bricks should prove satisfactory these bricks should be purchased, subject to the approval of the Ministry of Health.

"Concrete Roads" to be Broadcasted.

On July 21, at 10 p.m., during the "Men's Hour," Mr. David Weston, Managing Director of the Walker-Weston Company, Ltd., will speak on "Concrete Roads" at the London Station of the British Broadcasting Company. The remarks will be delivered simultaneously from all provincial stations of the British Broadcasting Company.

Tilemaker's Estate.

Alderman John Wilcox Edge, J.P., of Woburn Sands, Bucks., formerly of Albert-terrace, Wolstanton, Staffs., Alderman of the Staffordshire County Council and twice Mayor of Burslem, formerly partner of Messrs. Cork, Edge & Malkin, tile makers, who died aged 80, left gross estate of the value of £10,715, with net personalty £10,254. He gave £500 to the Staffordshire County Council for a fund for acquiring portraits of members.

Royal Tour in Scotland.

During their visit to Scotland the King and Queen have visited Melrose Abbey (illustrated in *The Builder* of June 15 last) and other historic places. Their Majesties were attended during the inspection of the Abbey by Mr. Hew Dalrymple, who was in charge of the whole day's tour, by Mr. C. R. Peers, the inspector-general of ancient monuments, and by Mr. J. Wilson Paterson, the architect in charge.

Public Works, Roads and Transport Exhibition.

The Public Works, Roads and Transport Congress and Exhibition, to be held at the Royal Agricultural Hall, Islington, N., from November 22 to 29, will be attended by a large number of official representatives from all parts of the country. The number of exhibitors already exceeds that of previous Roads and Transport Exhibitions. Firms still desirous of participating should at once write the Managers at 13, Victoria-street, S.W.1.

Swansea's Housing Schemes.

The Borough Treasurer's announcement of the saving of £21,900 by the Corporation on their first two housing schemes, viz., 150 houses in the first and 110 in the second, gave great satisfaction to Swansea Housing Committee. The only tender received for the erection of 21 houses at Fforestfach, amounting to £9,941, was accepted. The chairman (Ald. Molyneux) remarked on the apathy shown by the builders, which, he considered, would hamper their endeavours to catch up the housing shortage.

Paris Exhibition in 1925.

It is stated that the plans for the great international exhibition to take place in Paris in 1925—l'Exposition des Arts Décoratifs—are now rapidly being completed. The exhibition will occupy a large area on both sides of the Seine, including the Esplanade and Place des Invalides, the Champ de Mars, the Petit Palais, and part of the Champs Elysées. The areas on either side of the river will be connected by the Alexander III, the Concorde, and Iena bridges, which the Paris Municipal Council have decided to close entirely to ordinary traffic from a date in the near future until the close of the exhibition and the restoration of the site.

Prices in Germany.

The maximum price in Germany for cement as from July 1 has been fixed at 8,300,000 marks per 10,000 kg., excluding freight and packing.

The average price for pig-iron manufactured with German and English fuel is 3,964,000 marks. The price difference between hematite, foundry pig-iron I and III, and foundry pig-iron Luxemburg quality, remains the same.

COMPETITION NEWS.

Hull.

For the Corporation.—Designs for the erection of a cenotaph in Paragon-square. Sending-in date July 31. Conditions from the Town Clerk on receipt of a cheque for one guinea. The estimated cost of the work is £4,000, and premiums of £150, £75, and £50 are offered for the designs placed first, second and third respectively. The assessor is Mr. Stanley Hamp, F.R.I.B.A., whose decision will be final.

Mint Competition for Artists.

The Royal Mint proposes to strike and to place on sale at the British Empire Exhibition, 1924, a series of plaquettes in bronze illustrative of London as the capital city of the Empire, or of one or more of her main architectural features. It is proposed to hold an open competition for suitable designs, which should be submitted in the form of models in plaster, and which will be adjudicated upon by the Mint Advisory Committee on Coins, Medals, and Seals.

The following prizes are offered for the successful models:—One prize of 100 guineas, two prizes of 50 guineas, three prizes of 25 guineas.

The plaquettes, when finished, may be of any shape or size, not exceeding 3 in. square, that the artist may choose, and must show designs on one side only. The plaster models should be twice as large as the intended plaquette. Sending-in day, September 30. Further particulars from the Deputy Master of the Royal Mint.

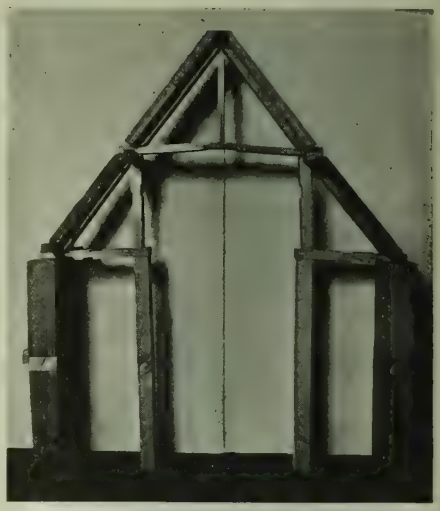


Fig. 5.—Model of Westminster Hall: Conjectural Norman Roof.

Halifax.

For the Corporation.—Plans and reports for lay-out of Bull Green site and part of centre of the town adjoining. Premium, £50. Sending-in day, October 1. (See advertisement this week.)

Westcliff-on-Sea Crowstone Congregational Church.

In the competition for a church, to cost about £20,000, twelve designs were submitted, and the award of the assessor, Mr. Arthur Keen, F.R.I.B.A., was as follows: First (premium, £100), George Baines & Son, F.R.I.B.A., F.S.Arc., London; second (premium, £52 10s.), J. H. Sellers, Manchester.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Singapore College (Jan. 1, 1924; March 30). Greenwich Baths (Aug. 25; May 4). Hull Art Gallery (Nov. 5; May 4). Mint competition for plaques (Sept. 30; May 25). Birmingham Masonic Temple (Sept. 12; June 22). Hull Cenotaph (June 22). Colour scheme (Sept. 30; June 29). Glasgow Pavilion (June 22): Warrington Church (Aug. 8).

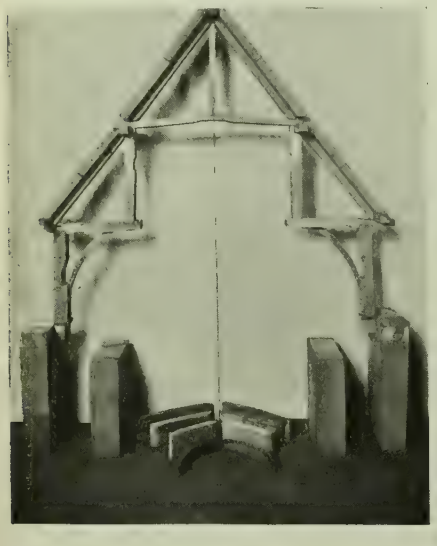

Fig. 3.—Model of Westminster Hall: Showing structural value of curved struts.

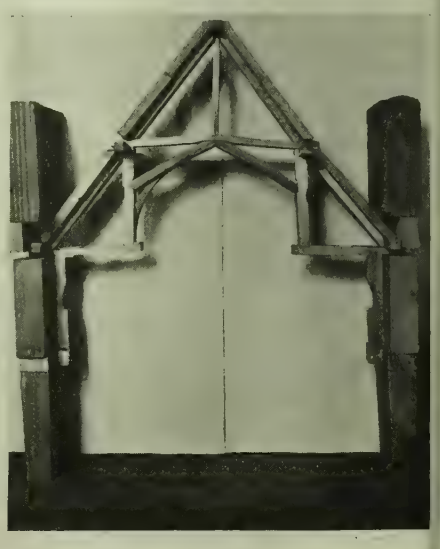

Fig. 4.—Model of Westminster Hall: Without arch rib and struts.

WESTMINSTER HALL ROOF.

By WILLIAM HARVEY.

The completion of the admirable works of repair by which the roof of Westminster Hall has been preserved, after it had been brought to the verge of collapse by the attacks of the death watch beetle, gives occasion for the recapitulation of the results of an inquiry into its structural principles, undertaken at a time when the works in progress in the hall laid open many details of its construction that had been previously unknown or unconsidered.

The views here expressed have, of course, no official authority, and H.M. Office of Works is not in any way pledged to acknowledge them. The investigation was, however, greatly facilitated by the opportunities for research granted to me by the Historical Buildings Branch.

The analysis of stresses in a structure so deficient in tensile connection as the roof principal of Westminster Hall is liable to lead to inconclusive and contradictory results, when studied in the ordinary way by means of statical diagrams and figures.

Definite results can be arrived at in this way, but, as pointed out by the Blue Book containing the famous report on the condition of the hall in 1913, the results of calculation do not agree in some important respects with the actual behaviour of the timbers themselves. The idea presented itself of applying to the examination of an English mediæval structure the laws of mediæval building science I had learned in Bethlehem and Hebron, where the masons in 1909 were still erecting vaults and domes with a conscious employment of expedients long since fallen into disuse in England. The exact statement of stresses was not aimed at, but it was hoped to arrive at some comprehension of the main lines of the design and the functions of the timbers as they may have presented themselves to the mind of their designer.

In such a case it seemed better to be content to be somewhat indefinite as to the number of tons per foot, and to maintain an agreement between the explanation and the facts explained, rather than to be demonstrably right in the details of a calculation which, somehow, failed to apply to the actual condition of the roof. The problem resolved itself into the question : "What did the master carpenter mean by his magnificent design ?" and its investigation was carried out by means of a series of models composed of loose wooden blocks.

The thought of balancing three-ton baulks of oak high up in air above the floor of the hall is so foreign to our modern methods of structure that it is interesting to see that such a balancing feat is practicable in miniature, and is, therefore, conceivably possible on a large scale. The photographs here reproduced were taken from one of the last models made, in which the dimensions of the blocks were proportioned fairly in relation to the design of the great timbers, and should prove of use in illustration of the structural significance of the main timbers of the roof in accordance with the practices of the Gothic science of construction with arch and buttress, corbel and pinnacle.

The model acknowledges, however, the carpenter's tradition also, which shows itself in the use of internal ashlar timbers instead of external pinnacles for the modification of outward thrust. The ornamental tracery which exists in the actual roof is not shown in the model, since it can hardly have been intended to play the important part assigned to it by the decay and distortion in other parts of the roof. Prior to the newly completed repairs the tracery bars were probably called upon to support and to connect timbers whose proper joints and bearings had been eaten away by the larvæ of xestobium tessellatum, or left in a precarious condition by slovenly attempts at patching up with fragmentary wedges and billets.

The tracery was no idle ornament and must have been looked upon by the designer as an additional safeguard in giving some slight additional strength to his mighty pile of balanced baulks.

Fig. 1 shows the model with all its blocks representing roof timbers in position. The junctions of the blocks are arranged to rest loosely in notches from which they are free to fall on the balance of the structure being disturbed but into which they push and lock themselves, while the model is complete, by their own weight and the pressure received from the upper timbers. The model was built up with the assistance of temporary supports, which were removed before the photograph was taken.

The state of balance is such that the outward thrust on the blocks representing the walls can be distinctly felt in handling the model. All the timbers contribute to the stability of the whole but are not all stressed to the same degree. The upper curved struts are the most readily dislodged and in this respect agree with what seems to have been the designer's forethought, for their counterparts in Westminster Hall have their upper extremities pegged into position with five or six treenails, whereas great timbers like the hammer post and collar beam are only provided with one. This liberality in the matter of treenails might be read as an indication of tensile function on the part of the upper curved strut were it not for the fact that only two treenails connect its lower extremity with the hammer post. The behaviour of the model makes it clear that they were pegged in securely because it was feared that they would not receive enough of the load to keep them always fast fixed by mere compression.

Fig. 2 shows the same arrangement of roof timbers, but the upper wall blocks have been removed. The balance of the whole is distinctly more precarious than before since the upper part of the walls acted as pinnacles to the thrust applied to the corbels by the heels of the wall posts. The precision with which the line of pressure is applied to the wall at its safe inner edge should be observed in this photograph. The corbels are represented by separate loose blocks, but are held in position by the oblique pressures from the wall posts. The behaviour in this respect agrees with that of the actual work where a stone corbel, broken off at the wall face by the partial collapse of the roof, was held pinned against the wall by the oblique pressure. Fig. 3 shows the model from which the timbers representing the great arch rib have been removed. The compressive bracket function of the lower curved strut is faithfully indicated in this state of the model. The great pressure and weight due to the large scale of the actual roof would have made it impracticable to omit the great arch at Westminster Hall, though roofs of smaller span were afterwards built very much in the pattern of Fig. 3. The balance of the model is, however, precarious and additional struts would be required to stiffen the structure.

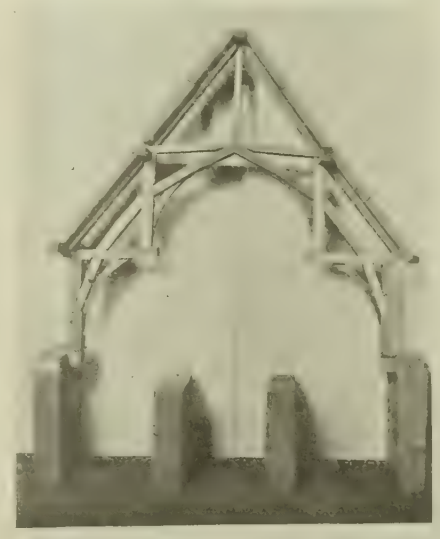

Fig. 2.—Model of Westminster Hall, showing delicate balance of timbers.

Fig. 4 shows the model denuded of both the lower curved strut and the lower part of the great arch rib. The roof pressures are now applied at a far more dangerous point, at the wall head. Not only have the blocks representing the upper part of the walls been reinstated, but a great deal of extra top weight has been required to make the model stand. Even so, the structure is firmer than it would be without the hammer posts, for when built up without them external buttresses had to be added to assist the top weight shown in Fig. 4 to withstand the outward pressure.

The compressive and balancing functions of the timbers are confessed in the actual roof by the drooping state of the hammer beams and by a curious detail of which traces exist in the wall ends of the hammer beams. These appear to have been loaded formerly by a great pole plate and cornice, which carried the lower ends of the common rafters and their ashlar timbers. The mortises for the pole-plate and cornice remain in the hammer beam, but the cornice itself must have become defective and been removed at a comparatively early date. The pole plate was converted into a wall plate by Sir Charles Barry, who severed its connection with the decaying ends of the hammer beams in order to place in position cast-iron shoes which formed part of a scheme for introducing tie bars into the roof when he removed the old buttresses from the east wall of the hall. The remainder of each length of plate he packed up and supported from the wall top, where it could no longer exercise its functions of balance weight to the hammer beam.

Following upon this subtraction of useful weight and application of futile tension, the inherent tendency of the hammer beams to droop developed to an extraordinary extent, and their wall ends were lifted clear off their bearings upon the wall top and upon the head of the wall post. The great arch rib and the lower curved strut received all the weight and became very obviously distorted in consequence.

Fig. 5 is a photograph of the same model adapted to illustrate the probable design of the Norman roof of the hall, removed to make room for the present roof of Richard II. The pattern is similar to that of a Norman roof at Leicester Castle Hall, and by comparing Figs. 1 & 5 it is easy to see how a designer of the Perpendicular period could read into the old roof (Fig. 5) the opportunity to replace its mighty posts with a great arch rib.

This proceeding would, of course, revolutionise the whole design from a structural point of view, and convert it from a very simple post and beam construction into a wonderful and highly complex composite arch calculated to direct its own line of thrust in a manner scarcely less economical than if designed upon true catenary principles. The tradition resulting from three hundred years' experiment in arch building permitted the designer to recognise in the upper parts of the main Norman posts the prototypes of the great hammer posts which he has perched high above the floor of the hall in such a manner as to correct, by means of their weight and the load applied to them by the purlin and collar, the kick of the principal rafters and of his newly-introduced arch-rib.

Then, to demonstrate his complete mastery of his problem, with a flash of wit that would be apparent to all who knew the pattern of the ancient roof, he carved the ends of the hammer beams below the posts into the forms of flying angels seemingly unconscious of the gigantic burdens upon their backs.

Auctioneers' and Estate Agents' Institute.

The annual provincial meeting of the Institute will be held at Bristol, from July 25 to 28, the headquarters being the Royal Hotel, College Green. An interesting programme has been arranged.

CORRESPONDENCE.

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Jury System in Architectural Competitions.

Sir,—We have read with interest the article by Mr. Robertson in your last issue, in which he advocates the appointment of a jury in preference to a single assessor. We should like to point out that this is the general practice on the Continent and in America, and that its adoption has long been recommended by the Competitions Committee of the R.I.B.A.

As members of the Beaux Arts Jury we have had considerable experience in the adjudication of competitions, and we have usually found that individual opinions as to the relative merits of designs have been materially modified after discussion between the members of the jury. No one is exempt from personal preferences and prejudices, and, in fairness to competitors, it is essential that every possible measure should be taken to eliminate these.

The general employment of a jury facilitates the introduction of new blood into the ranks of the assessors, as younger men who have distinguished themselves can be included without risking failure through inexperience, and in time the art of judging designs, which is still rather inchoate in this country, could be brought to the point that it has reached abroad, where the importance of a clear and logical appreciation of artistic values is better understood.

Arthur J. Davis.
H. V. Lanchester.

Sir,—The best way to secure a good building, which requires that the best architect should be employed in building it, is not at all easy of solution. I doubt whether public competitions as at present undertaken secure the best for us, though one looks in vain for any more certain way, and the present discussion of the subject reveals the inevitable uncertainty where the arts no longer move united by tradition. Tradition having been broken, its directing force no longer unconsciously guiding us, we suffer from the over emphasis of personality, or an eclecticism too diffused to determine anything. In such circumstances we do the best we can, but the best is not perhaps possible under such conditions.

More than one of our best modern buildings has been the privately directed choice of the donor who paid for it; in other cases a competition has achieved an equally good result. But results are uncertain and the assessor is a poor substitute for a healthier national endowment. It is when we are sick that we require so much nursing. Where one assessor only is appointed to judge perhaps a hundred designs—some better and some worse—he places upon himself a responsibility which, unaided, he were wiser to decline, and the jury system seems a better method.

Mr. Howard Robertson suggests that, in any case, such services are better given than paid for, and architects who, by reason of their reputation, are called upon for such work might well forgo their fees in the case of a public service which they may be expected to afford to give. In appointing a jury it is desirable that it should not be composed only of architects, in order to secure detachment and freshness of view, and to give breadth to professional prepossessions. The assessors or juries need to include more of the younger men, who are doing some of the best architectural work at the present time, and perhaps have other aims in life than personal ambition and the publicity it includes.

Isis.

Sir,—Mr. Howard Robertson's letter on the present system of judging competitions will, I feel sure, evoke sympathy from all ranks of the profession. In the interests of architecture it is essential that the old order should change in favour of conditions more suited to the enlarged and, I submit, most enlightened views now current. The competition system, which I have reason to believe had its inception in the late eighteenth century, when Thomas Cooley was awarded the prize for the City Hall, Dublin, has since recorded a century and a half of tears and wailings. There was trouble over the building of Blackfriars Bridge, more trouble when London Bridge was projected; delay and vexation over the rebuilding of the Royal Exchange in the forties, tribulation over Street's Law Courts, and recrimination over the awards of nearly all single assessed competitions from the late seventies until the present moment. There have, of course, been exceptions. Such successful buildings as St. George's Hall, Liverpool, Leeds Town Hall, and the new Cathedral at Liverpool can each be cited as instances of the value of autocratic judging. But the reverse of the medal also has its lessons. When one thinks of the time and energy required to prepare a well thought-out design, it is a tribute to the perseverance of young architects that they are content to engage upon such gambles, for under present conditions this strong term aptly states the nature of the average competition.

The jury system, I am glad to say, has of recent years been slowly but surely creeping into favour; so far it has been limited to questions of housing and town development. The selection of an assessor for competitions of a public nature has, hitherto, been guided by the rarest discrimination and tact, but the responsibility is too great for one man, however well qualified he may be as an architect, to master every particular essential to the exact realisation of a complicated set of conditions. Under the guidance of single assessorship there is, *à fortiori*, a tendency for competitors to make a study, not of the work before them, but of the whims and idiosyncrasies of the assessor. Hence the strong family likeness that exists between the work selected for first place and the peculiar detail, mannerisms and oddities of the acting assessor, who influences in a subconscious way the work of the competitors in the initial stages. The jury system does not mean more than a slight readjustment of the excellent machinery at the disposal of the Royal Institute. Three assessors at least should be nominated by the President for all works of the first magnitude, and these gentlemen should have power to co-opt others, such as an engineer or a sculptor, should need arise. The fees now in operation for assessors would need revision, but the scale could be proportioned to suit the promoters. It is clear that three assessors would have less work to do than is the case when a single individual undertakes the responsibility. The arrangement of a competition entails more than drawing up the conditions or judging sets of drawings. In the first place it demands an envisioning of the building as a completed entity, not from one, but from many points of view. It calls for an exact knowledge of the subject, some acquaintance with current events and social conditions, and an inside knowledge of the type of men likely to enter the lists. As Mr. Robertson states, competition under the jury system would give more attention to preparing a good design than to studying the personality of the eminent assessor before whom, under present conditions, their drawings would be reviewed. How and when the revised system can be introduced must be left to the President and Council of the Royal Institute. That the change must be brought about in the near future is a pressing need which admits of little argument to the contrary.

A. E. Richardson.

University College, London.

Muntz Park Recreation Centre, Birmingham. (*See p.* 84.)

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

The following are notes from the Minutes of the R.I.B.A. Council meeting on June 25 :—

The British Institute of Industrial Art.—It was decided to support the Exhibition which is being arranged by the British Institute of Industrial Art at the Victoria and Albert Museum in September and October next. The Exhibition is to consist of Churchyard Monuments and other Architectural Exhibits. Architects who wish to exhibit appropriate examples of work within the scope of this Exhibition are recommended to communicate with Major A. A. Longden, D.S.O., Director of the British Institute of Industrial Art, 16, Grosvenor-gardens, S.W.1, from whom particulars may be obtained.

Singapore Society of Architects.—The Council approved the application of the Singapore Society of Architects for admission to alliance with the R.I.B.A.

Reading Corporation By-Laws.—It was decided, at the request of the Berks, Bucks and Oxon Architectural Association, to support the Corporation of Reading in their efforts to obtain the sanction of the Ministry of Health for a provision relating to footings in their new by-laws similar to that in the London Building Act.

Retired Fellowship.—Mr. Albert E. Murray (F) was transferred to the list of Retired Fellows.

Reinstatement.—Mr. J. Coughey Walker was reinstated as a Licentiate.

Visit to Ocean Liner.

Through the courtesy of the Cunard Steamship Company and of the U.S. Shipping Board, a party of leading members of the Royal Institute of British Architects paid a visit on July 6 to the *Aquitania* and the *Leviathan*, now lying at Southampton. Mr. Arthur Davis, F.R.I.B.A., the architect, who was responsible for the internal planning and decoration of the *Aquitania*, conducted the party and explained the methods employed in dealing with these colossal vessels.

London Building Acts.

The Committee appointed by the Council of the R.I.B.A. in July, 1922, to consider the reform of the London Building Acts have submitted to the Council an Interim Report covering the work done by the Committee up to the end of the Session. This Report, which deals with a great variety of points of the utmost importance to architects and building owners in London, will be considered by the Council at their meeting on July 23. Mr. C. A. Daubney, the Hon. Secretary of the Committee, has been invited to attend the meeting for the purpose of assisting the Council.

Board of Architectural Education.

Attention is drawn to the fact that designs prepared at recognised Schools submitted for approval by candidates for admission to the R.I.B.A. final examination in lieu of the same number of R.I.B.A. problems in design must in all cases contain the name of the School, and be countersigned by the master of the School.

Mr. Paul Waterhouse.

Members of the Councils over which Mr. Paul Waterhouse presided and of the Board of Architectural Education during his Chairmanship of that body, and Presidents of Allied Societies during the years 1921–1923 have united to present him with a signed address in recognition of his services as President. The address will be presented to him by the President (Mr. J. Alfred Gotch), on Monday next, at 3.30 p.m., in the Common Room. Members who desire to be present are cordially invited to attend.

Help to British Art.

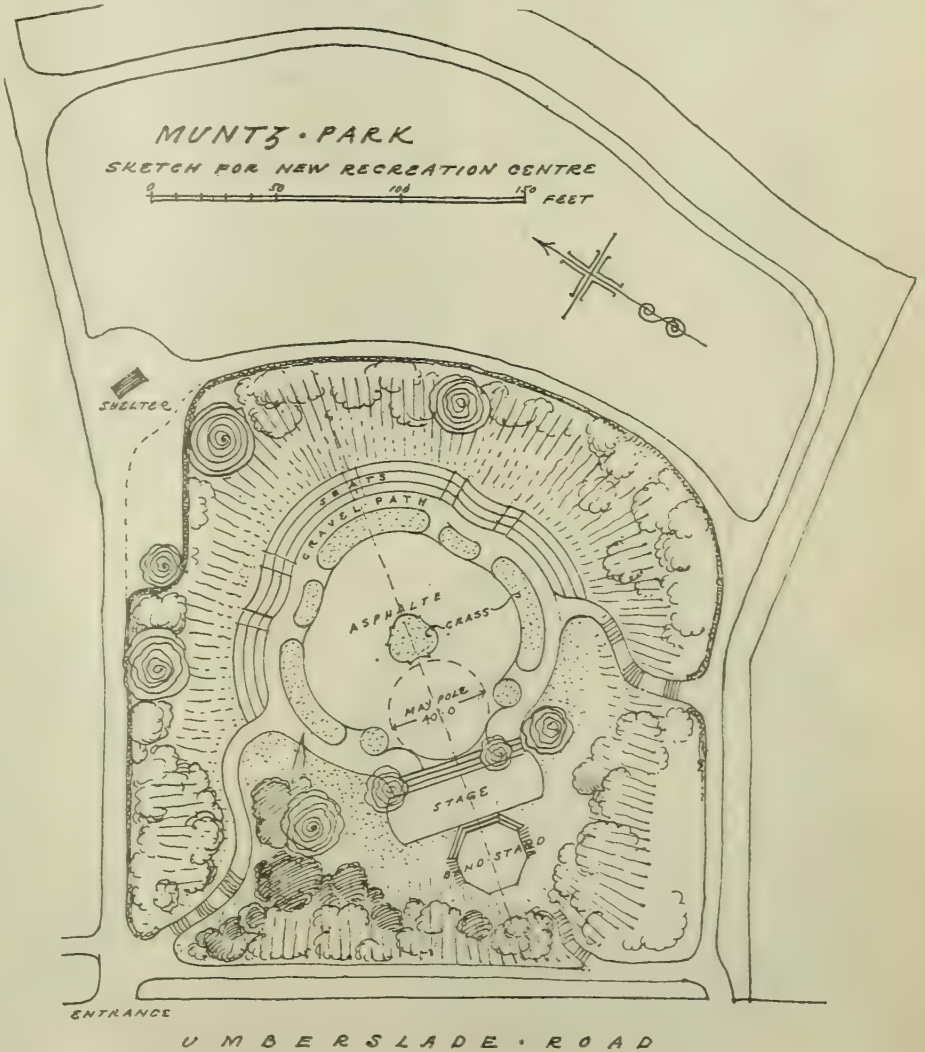
The Museums Association, at their conference at Hull, adopted a scheme for circulating art exhibitions, which it was declared would be a real help to British art. It was announced that with the assistance of eminent artists a selection of a hundred paintings had been made for the first exhibition.

THE SOCIETY OF ARCHITECTS.

The Study of Modern Architecture in America.

Last autumn the Society of Architects, with the assistance of a generous donation from one of its members, established a scholarship for the study of modern architecture abroad. It is of the value of £300 and was offered this year for the study of modern architecture and methods in the United States of America. The announcement drew from the recent convention of architects in Washington a resolution congratulating the society upon its action. It may therefore be assumed that the holder of the scholarship will be able to pursue his studies in the States under the most favourable conditions with the co-operation of leading American architects. The report of the Jury of Assessors charged with the duty of recommending a suitable candidate for the scholarship has just been confirmed by the Council of the Society, which has awarded the first scholarship to Mr. R. A. Cordingley, of "Glenorchy," Irlam-road, Sale, Cheshire, who was articled to Mr. R. J. McBeath, M.S.A., of Sale, and after four years Army service entered the Manchester University School of Architecture, where he won the R.I.B.A. Henry Jarvis Ex-Service Travelling Studentship in 1920 and 1921, and also the Manchester Institute of Builders' Travelling Scholarship in 1922. He was elected an Associate of the R.I.B.A. the same year, and was successful in winning the Rome Scholarship in Architecture for 1923. The scope and conditions of the Society's scholarship render it not merely of educational value to the holder, but a means of securing, through him, for the profession a serious contribution to the information and original thought available in respect to modern architecture and its development abroad.

High Buildings.



The Trehearne-Norman premium of £15, offered by the Society every three years for an essay on some subject of professional interest, has been awarded this year to Mr. F. R. Jelley, of "Fairview," Cedar-road, Sutton, Surrey, for an essay on "The Influence of High Buildings on Civic Development." The essay will be found to be a useful and suggestive contribution to a subject which is being very widely discussed in professional circles.

Membership Examination.

The following candidates satisfied the examiners in the recent examination to qualify for candidature for membership in the Society of Architects :—

James Ernest Firth, 83, Burton-road, Lincoln; Charles Beresford Marshall, 54, Grey-street, Newcastle-upon-Tyne; Frederick Uriah Jenkins, 18, Cyprus-avenue, Church End, Finchley, N.3; Duncan St. Clair Macphail, 130, Marchmont-road, Edinburgh; Frederick Charles Button, 5, St. Hilda-road, Folkestone.

The majority of the candidates who took the examination were relegated in various subjects, and most of them failed to reach the standard set by the Society in architectural composition and design. It is with a view of supplying a deficiency in the facilities for architectural education in this subject, with which, we are informed, candidates in the smaller towns are faced, that the Society's correspondence course in architectural composition and design is meeting with such support as to call for an extension of its scope and facilities.

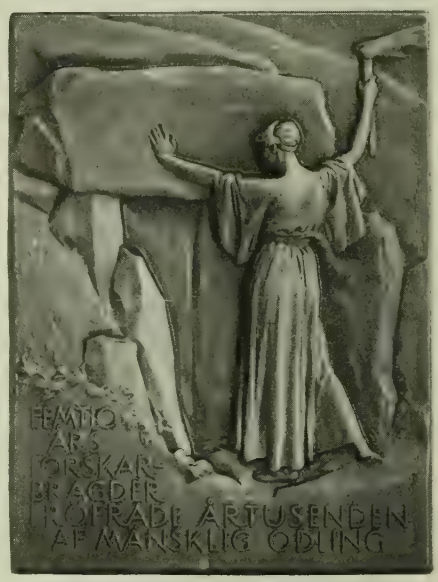
Medal by Gerda Qvist.

THE ART OF THE PLAQUETTE:



ROYAL MINT COMPETITION.

BY KINETON PARKES.

It has been decided by the Royal Mint to institute, in connection with the British Empire Exhibition next year, a competition in architectural and sculptural design. This is one of the most important steps ever taken in this country in the direction of encouraging practical decorative art. Prizes of 100 guineas, two of 50, and three of 25 form an adequate inducement for artists to enter a competition for works not more than 3 in. square when reproduced, or not more than double that size in the models. Further than this, although the successful models will become the property of the Mint, a moderate royalty will be paid the artists on all plaquettes sold.

The subject of the competition, London, as the capital city of the Empire, is big enough to offer scope to every designer, and to stir his imagination by its richness of suggestion. The material of the models is to be plaster, and the reproduced plaquettes will be in bronze. All particulars may be had on application to the Deputy Master of the Royal Mint, London, E.1, and the models must be sent to the Mint not later than September 30.

The plaquette is not a form of artistic production that has received encouragement in this country, for England, less than most countries, is disinclined to encourage the adoption of permanent popular souvenirs of historic occasions, or medallic memorials of its great men and women. Memorials, medals and plaquettes, on the contrary, are widely popular on the Continent and even in America, where public and ceremonial events receive some measure of universal attention. The art of modelling small things in wax, clay or plasticine is one yet to be developed here, but our designers are ready now that the demand has begun. Architectural decorative designers should be particularly interested in this movement, as the subjects of London, London events, and London buildings, appeal particularly to them; indeed, it might have been originated purely in their interests and favour.

Plaquette, by Eric Lindberg.

To any draughtsman, modelling, whether incised or in relief, is easy; and the technique of the medal and plaquette is soon acquired from the study of the magnificent collections of Renaissance and other works in the museums, and the illustrations of the work of sculptors in little at work at the present time. The main thing is to produce a complete picture in a severely restricted design. In this, a feature for which British craftsmen are well prepared owing to the extensive efforts that have been made in our art schools, that of lettering, is a valuable adjunct to the pictorial effect, and in the past has added very greatly to the charm of some of the most important examples of the medal and plaquette.

In Sweden and Finland, in Spain, Italy and

OBVERSE.

REVERSE.

University of Prague Memorial, by Otokar Spaniel.

Memorial Medal, University of Abo Finland, by Emil Wikstrom.

in Czecho-Slovakia the finest sculptors have produced plaquettes and medals, and have shown that pictorial plastic sculpture can in its way equal the exquisiteness of glyptic gem-work, and rival the art of the ciseleur. Erik Lindberg, of Stockholm, is an example of the true medailleur and plaquette maker. He is the author of the Nobel Prize, the André, North Pole, the Carnegie Foundation medals, as well as many personal ones. Another maker of medals and plaquettes, devoting all her energies to the craft, is Gerda Qvist, whose portrait memorials include several artists and poets of her own and other countries; the Finnish sculptor, John Munsterhjelm, has done the same (including one of Sibelius, the musician), and Emil Wikstrom, the monumental artist of the same nationality, has made, among others, a very fine medal for the University of Abo.

That really great sculptor Bohumil Kafka, of Prague, professor of sculpture there, is the author of a number, one of which, Mr Hanus Karlik, is a very fine portrait medallion. Otakar Spaniel is another Prague sculptor who devotes much of his talent to the craft and has produced, among others, the two fine commemorative medals of the Prague University and National Theatre, which may well serve as examples for any artist essaying the plaquette form for the first time, so fitted are the designs for the purpose. Another form is adopted by Romano Romanelli of Florence, in his modern memorial work. He reduces his things to as simple a statement as possible, although he follows part of the road indicated by the Italian Renaissance designers. An example is his memorial of the Dreadnought "Andrea Doria" (1914). The Catalan metal workers produce good things in the form of repousse plaquettes, but Antoné Parera, one of them, prefers modelling, and his plaquettes have a clean classical character of

Plaquette, by Antoné Parera.

their own, well seen in a memorial to a newly-born child and in an admirable series of Sports plaquettes. In America there is a strong medallic school, including several of the foremost sculptors. At the present moment in New York the National Sculpture Society is holding a representative American Exhibition, and plaques, plaquettes, medals and other reliefs in little form an important section. Many of them are portraits, but many others are pictorial memorials such as Victor Brenner's "Peace." John Flanagan's "City of Verdun" is very suitable for a model for the Mint competition, as is also the work of Emil Fuchs, Edward McCartan, and Otto Schweizer.

The art of the plaquette is being pursued in most countries with vigour, and there is every reason to hope that the fine technique of the British modeller, and the fine sense of design of the British architect, so well fitted for plaquette and medallic work, will find sufficient incentive in this important competition to manifest itself at its highest and prove that it is by no means behind that of other nations.

OBITUARY.

The Late Mr. R. F. Atkinson.

Mr. Cyril A. Farey, A.R.I.B.A., writes in the R.I.B.A. *Journal*:—

On June 15, at Leeds, after an operation for appendicitis, Mr. R. Frank Atkinson, F.R.I.B.A., died at the age of 52. Mr. Atkinson's early training was in Liverpool, and he came under the influence of Norman Shaw. He started practice in London, and his work first became known generally by the new premises which he designed in Oxford-street for Messrs. Waring & Gillow. This was followed by the first portion of Selfridge's Store. From 1908 to 1912 he was engaged upon his principal work, the Adelphi Hotel, Liverpool, of which only two-thirds has yet been completed. To appreciate the scheme fully, the third portion at the rear must be considered. The excellence and delicacy of detail in the Adelphi Hotel obtained for Mr. Atkinson the commission for the interior decoration for the Cunard liner *Transylvania* and Pullman cars for the London Brighton and South Coast Railway. Mr. Atkinson's last important executed work is Magnet House, the premises for the General Electric Company in Kingsway, completed in 1921. . . . . Three days before his death he sent in a design for the Bournemouth Pavilion competition in collaboration with Mr. Charles D. Carus Wilson and Mr. W. Boyd Scott, his former assistants, who will carry on his practice. He leaves a widow and young child and five children by a former marriage.

ILLUSTRATIONS.

New Offices for the Great Northern Telegraph Co., Ltd.

This building, of which reproductions of the architect's working drawings and a description were published in our issue of February 10th, 1922, is being erected in St. Helen's-place, Bishopsgate, and is nearing completion. Mr. Farey's perspective view is on exhibition at the Royal Academy. The architect is Mr. Henry A. Saul, F.R.I.B.A., and the general contractors are Messrs. John Greenwood, Ltd. Subcontracts are being carried out by the following firms: Constructional steelwork, Messrs. Redpath Brown & Co.; fireproof floors and partitions, Messrs. H. W. Cullum & Co.; asphalte, Messrs. T. Faldo & Co., Ltd.; Portland stone work, The United Stone Firms; carving, Messrs. A. J. & A. T. Bradford; sanitary work, Messrs. Davis, Bennett & Co.; steel casements, The Crittall Manufacturing Co., Ltd.; lifts, The Express Lift Co., Ltd.; heating and ventilating, Messrs. R. Crittall & Co., Ltd.; lift enclosures and iron railings, Crittall Freeman Bronze, Ltd.; electric lighting and power works, Messrs. Girdlestone & Co.; marble work, Messrs. Fenning & Co., Ltd.; wall tiling and terrazzo floors, Messrs. Carter & Co.; jointless flooring, Messrs. H. Burke & Co.; oak block flooring, The Westminster Patent Flooring Co.; rubber carpeting, The North British Rubber Co; linoleum, Messrs. Treloar & Sons; copperlifte glazing, Messrs. Haywards, Ltd.; posting tubes, Messrs. F. Sage & Co.; iron stairs, Messrs. Wilmer & Sons.

University of London School of Architecture.

The designs illustrated are representative of the work now being carried on at this School. The character of the work is of a high standard. The examples given are from the recent exhibition of students' work and are in most cases modern in character. The school is to be congratulated on the works now being produced.

B.A. Examination for Honours, 1923: A University Athletic Centre.

A design was required for a building which would form an important part of the athletic centre of a University, the building to include a large vestibule, a gymnasium, and a swimming-bath. The vestibule would serve not only as a general means of communication, but as a memorial to the donor of the building. By its size and treatment it would form the dominating feature of the athletic centre. The vestibule was to be entered from the playing-fields and from the main approach, and would provide the chief means of access to the swimming-bath and the gymnasium. The gymnasium hall would have a superficial floor area (excluding seating accommodation) of approximately 20,000 sq. ft. Raised seats for spectators to be provided, arranged in such a way that every spectator had a clear view of the floor. The superficial area of the swimming-bath would be approximately the same as that of the gymnasium floor. The water area would be about 5,000–7,000 ft. super. Raised seats to be provided for spectators, who must have, in all cases, a clear view of the swimming pool.

The Lever Prize in Architecture.

For this competition designs were invited for the treatment of the façade of the buildings in the new lay-out for the approach to King's Cross Station, as shown in the winning design in the Lever competition held by the Town-Planning Department. The designs show the façades facing the Euston-road, and a cross section taken on the central axilia line, showing the fore part of the new station (*i.e.*, the concourse) and the new building on the East *or* West side.

Bartlett School of Architecture: Diploma in Architecture, 1923—A Concert Hall.

The concert hall was to be built at a south coast summer resort. The site is level, and is situated at the south side of some public gardens. A wide road runs between the gardens and the sea. The hall is to seat 600; the seating to be without galleries or boxes.

Six Hours' Sketch Design (Fourth Year)—An Island Cafe and Boating Pavilion.

The design is based on the requirements stated:—About 150 ft. from a river bank stands an island of a roughly elliptical shape, measuring approximately 300 by 100 ft. The height of the river bank and summit of the island above high-water mark is 20 ft. The ground on the shore side at this point will be laid out as public gardens, and it is intended to connect the gardens to the island by a bridge. On the island will be built a cafe and two lounges, the former of approximately 8,000 ft. and the latter of 2,500 ft. super each. Necessary service and public lavatory accommodation must be provided. Landing stages for pleasure boats will be built on both the shore side and the island.

Roman Study (Second Year)—Imperial Baths.

The design is based on the following requirements:—A Roman emperor of the first century A.D. has commanded the construction of baths in the gardens of his country palace for the use of himself and friends. The baths will contain one or two entrances, vestibules and dressing-rooms, a cold-water swimming tank (frigidarium) open to the sky, and a large chamber for warm baths (tepidarium), and also a chamber for hot baths (caldarium). Colonnades giving shelter from the sun will form part of the scheme and exedra for rest and conversation may be added if desired. The building will be decorated in a richly imperial manner with marbles, mosaics, paintings, bronzes &c.

A Naval Memorial (Fourth Year).

On a rock just within the entrance to an important harbour, and midway between the shores on either side, will be built a memorial to the men who lost their lives in the Battle of Jutland. The superficial area of the rock is about 4,000 ft. super, at mean tide level. Its form is proportional as 2 to 3, the long axis pointing seaward. Height of top of rock from water at mean tide level is 40 ft. The width of the harbour entrance is about three-quarters of a mile.

CORRESPONDENCE.

(*Continued from p.* 88)

Small House Plans.

SIR,—I wish to thank Messrs. Culpin & Bowers for their reply to my letter, and am glad they agree with the axiom that the scullery sink should be as near the kitchen fire as possible; but are they reasonable in suggesting I put it forward as something original when it was a quotation from a work published so far back (some 50 years) that it is apparently forgotten?

In the cases they mention, in which the cooking is done in the scullery, or small kitchen, and the living-room is used as a dining-room, would not direct communication between the two be desirable? It would facilitate service, and for that reason is frequently provided in houses of a larger type than those shown. The plans were described as "the result of considerable experience and endeavour to give the best possible accommodation"; that rather challenged criticism and led me, mistakenly, to imagine they were rather put forward as a last word.

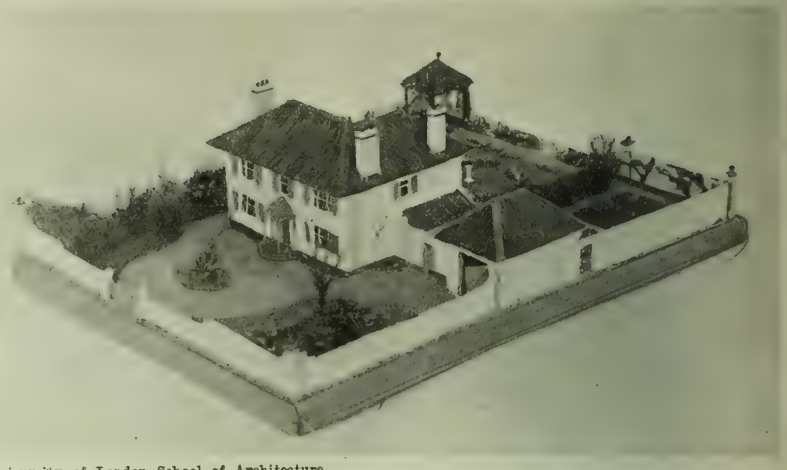
With regard to the back porch in plan "D," left hand, it has a cube of some 220 ft.; as the type has been repeated by the thousand let us take three thousand, that will give a total cube of 660,000 feet, which at, say 1s. (often exceeded at peak prices) amounts to £33,000. Many a burdened tax-payer would consider this too much to pay for a feature which is not absolutely necessary; and, in carrying the plan a stage further, might be omitted.

London, S.W.12. W. J. H. LEVERTON.

Gray's Monument, Stoke Poges.

SIR,—I read from our local paper a letter from Mr. Walter de Gray Birch, which had been reprinted from your columns, and beg to inform you as follows:—

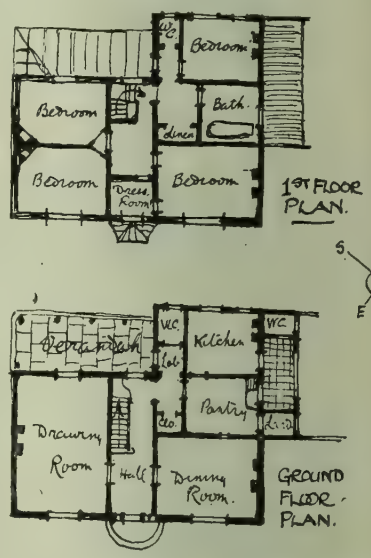
Land belonging to the estate surrounding the church, having a frontage to the roads of about a mile and a half, has recently been sold for building purposes. The above monument stands on ground forming part of the church fields, adjoining the churchyard, comprising some thirteen acres of the land above referred to. Three acres of these, on which the monument stands, have recently been given to the National Trust for the Preservation of Ancient Monuments. The remainder has already been planned out for building plots, hence our anxiety to preserve the same, and which is understood to be "the lea" of the poem. On two portions of the land already sold near the church, numerous houses have recently been built, and others are contracted for.



Here, we think, no mistake has been made by the National Trust in preserving for all time this monument designed by Wyatt, and with this remark will allow Mr. de Gray Birch's letter to rest on its merits. F. W. HIPKISS,

Stoke Poges. *Hon. Sec. Appeal Committee.*

Moisture in Walls.



We have received the following inquiry from a correspondent:—

"Recently I executed some alterations to business premises, the walls of which are covered with embossed paper, painted and varnished. Whilst the usual precaution has been taken to prevent moisture rising in the walls, white woolly fungus has made its appearance; this, in parts, is interspersed with brown patches discolouring the embossed paper; the walls were plastered with a reliable patent plaster. I am of the impression that the effect is brought about by the fact that the brickwork was executed in very wet weather, and that the moisture has not had a chance of evaporating. This would seem correct, as, where the stoothed partitions adjoining have been similarly treated as the brickwork, no cause for complaint has been found. Would you please inform me if a petrifying liquid, and which particular make, would cure this; or would you suggest any other remedy?"—F. A. C.

SIR REGINALD BLOMFIELD, R.A., Architect.

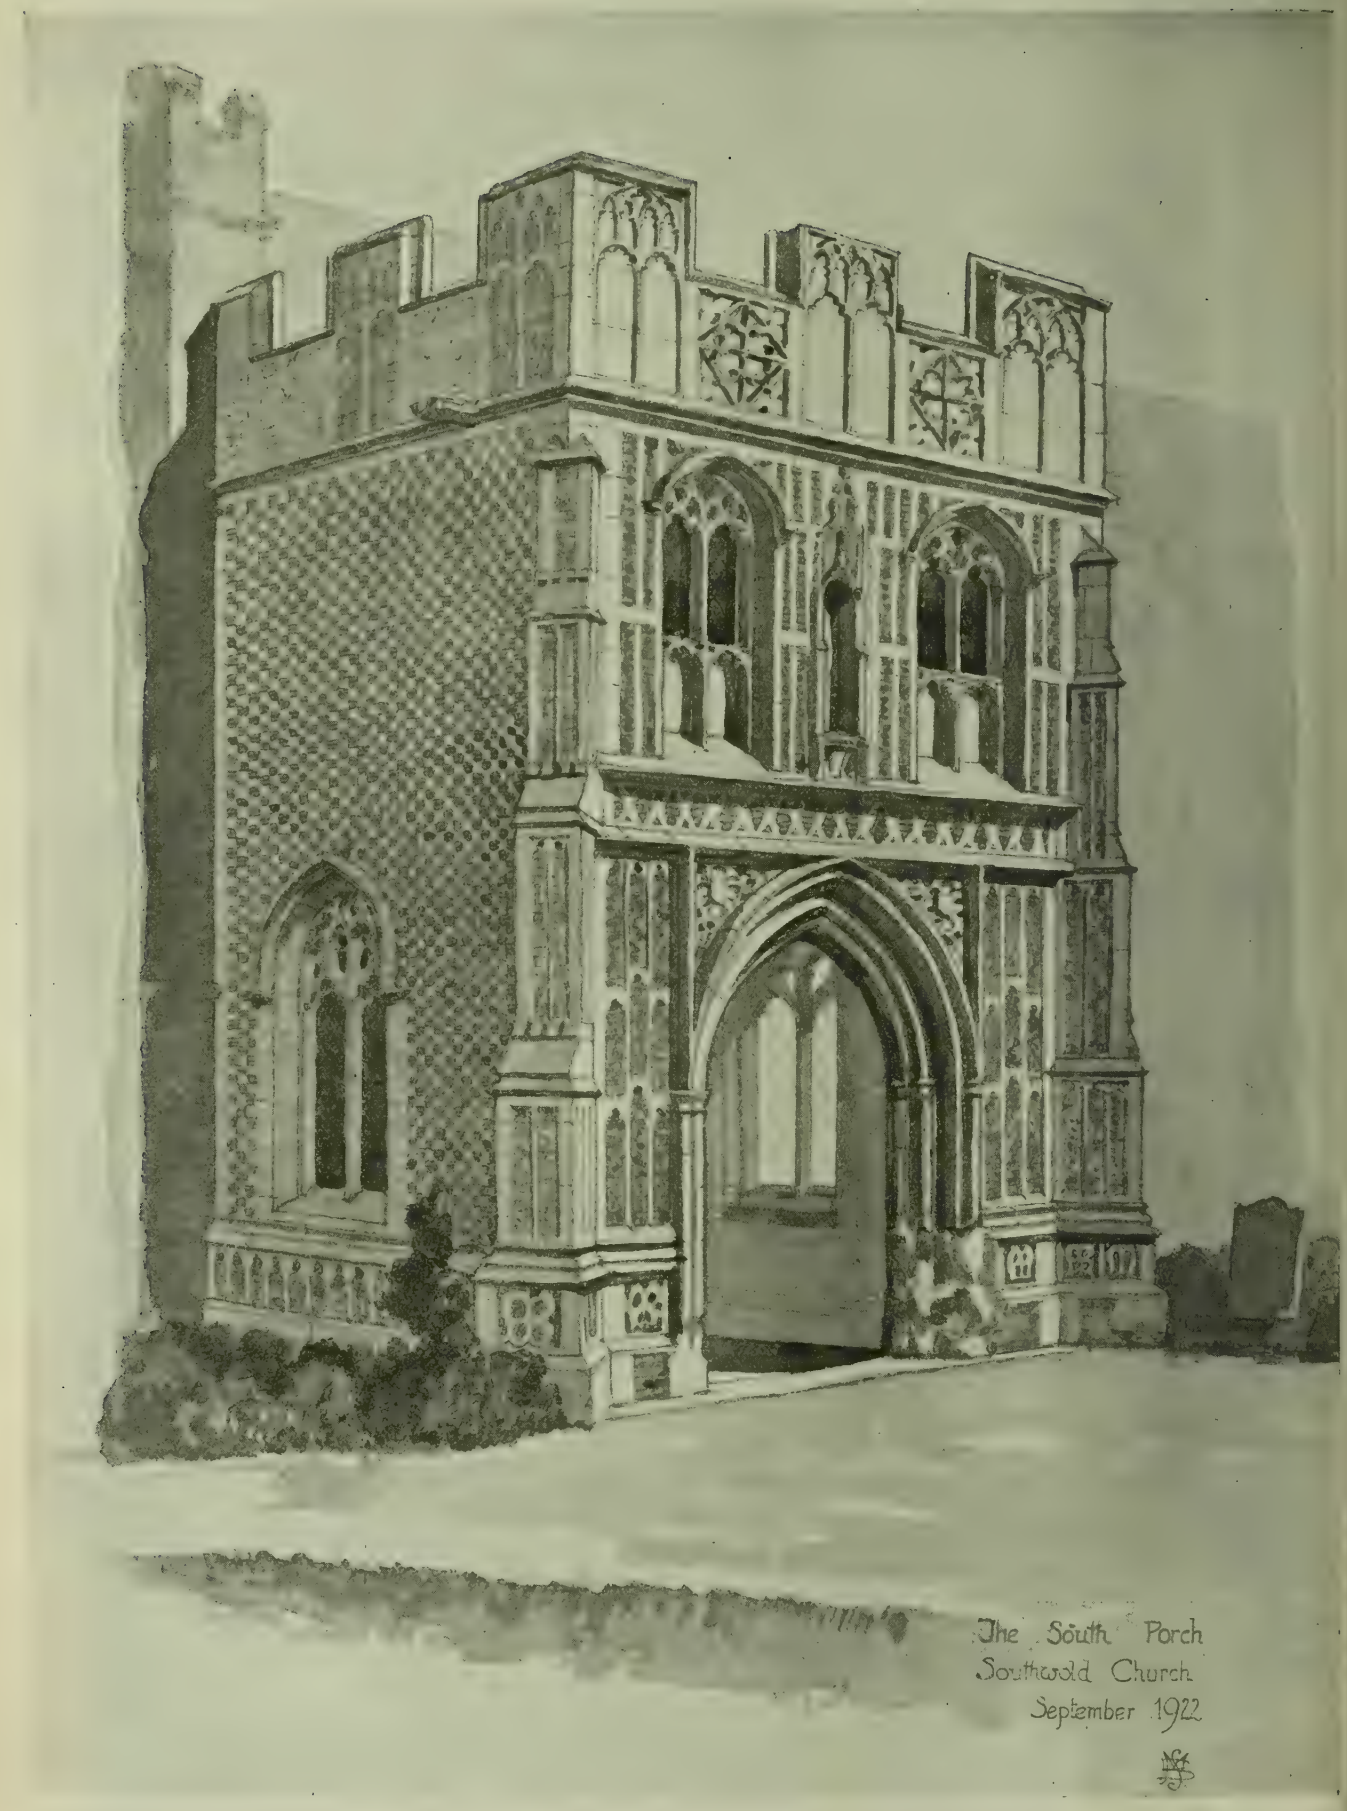
[Illustrations of this design were given in our issue for May 12, 1922.]

Co-operation with Germany.

SIR,—I understand a certain number of architects have received a request from a well-known British architect asking them to contribute plans, drawings or photographs of recent work to a proposed publication by a German architect. Such a suggestion in the circumstances seems rather inopportune to many of those who have received the request, who consider that the time has not yet arrived for such co-operation.

H. P. CART DE LAFONTAINE.

Cardiff School of Art Club.



The summer excursion of the Department of Architecture and Civic Design was held recently when a number of the members, including the Vice-President, Mr. R. H. Winder, M.A. A.R.I.B.A., and Mrs. Winder, visited the beautiful Valley of the Wye. The main points of interest included the Abbey of Tintern, now being restored by H.M.O.W. (as described and illustrated in *The Builder* of August 18, 1922) and the Castles of Raglan and Chepstow affording good opportunities for studying mediæval architecture; while in the picturesque towns of Monmouth and Chepstow many interesting Georgian features were noted.

HOUSES ERECTED AT DARLINGTON.

THE photographs on this page show views of the Faverdale, Darlington, Housing Scheme of the London and North Eastern Railway Company (North-Eastern Area) Housing Trust. The lay-out on the architect's original plans provides for, in the near future, four hundred or more houses.

Two hundred of the houses have been erected and are ready for immediate occupation. These houses have been erected in record time. The work was commenced on March 1, 1922, and the contractors handed over the whole scheme complete in every detail, including all necessary roads, drains, and fencing, on February 28, 1923.

The houses are all built in blocks of four, as this construction was considered advantageous from an economical point of view, and also for the increased comfort of the inmates with regard to interior warmth, etc.

Fifty per cent. of the houses are provided with the following accommodation:—Ground floor: Living-room, washhouse, pantry, larder, coal-store. First floor: Three bedrooms, bathroom with w.c. (which in some cases is on the ground floor). The remaining houses are all provided with a parlour or sitting-room in addition, and eight of the houses have four bedrooms. Sanction was obtained from the Ministry of Health for carrying out a specially designed drainage system.

The contractors were John Laing & Son, Ltd., of Carlisle, who had the assistance of the following sub-contractors:—Steel windows, Messrs. Hope & Sons, Birmingham; plumbing and sanitary work, Messrs. Shuksmith, York; baths, Messrs. Doulton & Co., London and Paisley; grates and ranges, Messrs. R. & A. Main & Co., Falkirk, N.B. The entire scheme has been carried out from the designs and under the supervision of the Company's architect, Mr. Stephen Wilkinson, A.F.C., F.R.I.B.A.

London and North Eastern Railway Co. Housing Trust, Darlington: Views of the Oval.
MR. S. WILKINSON, F.R.I.B.A., Architect to the Railway.

THE NEW HOUSING CAMPAIGN:

SELECTION OF TENANTS AND LIMITATION OF RENTS.

BY JAMES P. ORR

(Late Director of Housing to the London County Council.)

THE new Housing Bill is directed towards meeting local needs by enlisting private enterprise in the construction of the dwellings needed. Private builders are not likely to construct dwellings of any particular type if there is any risk of the local authority putting similar dwellings on the market at lower rents or prices than the builder must charge to make a reasonable profit. The Bill provides against this risk: it is only the smaller types of dwellings, which at the present cost of production yield too low a profit to attract private builders, that the local authority may build under State-aided schemes; and the Minister of Health will sanction such schemes, only if and in so far as he is satisfied that there is a need for such dwellings, and that such need can best be met by the provision of such dwellings wholly or partly by the local authority.

Local authorities are empowered by the Bill to assist private enterprise (i) by grants, and (ii) by advances, under certain limitations, the chief of which may be summarised as follows:—

(i) *Time limit.*—The local authority may make a *grant* at any time after the completion of a building, but they will get the State subsidy only for buildings completed before October 1, 1925, except where the Minister allows an extension of the time limit up to June 1, 1926. *Advances* are permissible, if made before October 1, 1926, even though the building is completed later.

(ii) *Limit of amount.*—There is no statutory limit to the local authority's grant to a private builder; but the State subsidy to the local authority is the amount of that grant, subject to a maximum of £6 per house per annum for 20 years. The only limitation on the amount of an advance is that it must not exceed 90 per cent. of the value of the mortgaged property, and must not at any time before completion of the building exceed half the aggregate value of the site, and of the constructional work done to date. There is no State contribution towards the advance.

(iii) *Type of dwelling.*—To qualify for a grant, a dwelling must have a floor area of from 620 to 950 sq. ft. in two-storied buildings, and from 550 to 880 sq. ft. in flats, except where the Minister for special reasons sanctions a reduction of the mimimum by 50 sq. ft. There is no limitation as to value.

To qualify for an advance, a dwelling must not exceed £1,500 in value. There is no limit as to maximum size, but the same minimum is prescribed as for houses subsidised by grants.

(iv) *Circumstances justifying assistance.*—A local authority may make grants for dwellings only if there is a need for such dwellings in their area, and if such need cannot be met without such assistance as the Bill permits.

(v) *Conditions of assistance.*—Local authorities may make both grants and advances subject to conditions approved by the Minister of Health. The only compulsory condition is that an advance must be secured by mortgage.

The Bill does not explicitly provide, as a condition of assistance, that rents shall be limited to certain maxima and that tenants shall be only those who cannot afford higher rents.

The main purpose of this article is (*a*) to urge that there should ordinarily be such a condition, enforceable for say 20 years, and (*b*) to suggest a procedure for enforcing specific performance thereof.

As to (*a*), in the absence of such a condition, builders will naturally dispose of their houses at the best price or rent obtainable: and the result may be that the houses will not be within the reach of the poorer people most in need of relief. For fear of such a result many members of Parliament urged in the discussion of the Bill in Committee that the proposal to make grants to private builders should be dropped altogether. Others supported an amendment in favour of conditions limiting rent. The Minister of Health opposed this amendment on the ground that builders would not accept such conditions; and it is, perhaps, as well that the amendment was lost: for there may be places in which such conditions are unnecessary, *e.g.*, where moderation in rents can be secured by competition among many private builders. It is still open to local authorities to include the conditions in question among those on which the grant is made (though they are not bound to do so), and it is to be hoped that they will do so wherever there is any doubt as to whether the subsidised houses will now or in the near future be let at rents which those for whose benefit they were subsidised can afford to pay.

If the new campaign is to be based on goodwill and kept going by goodwill, as it should be, then its main object should surely be to provide better homes *at rents which those who need the homes can afford to pay.* When this is the declared object of a local housing campaign, we may find local investors more willing to take up local Housing Bonds at moderate interest, workmen and contractors more willing to put their best work into a building scheme, and ratepayers more willing to pay a substantial subsidy from the rates. All this will help towards the earlier solution of the housing problem by reducing the cost of building, and consequently the prices or rents which must be charged to yield a reasonable profit to the builder and the investor.

As to (*b*), the sanction provided in the Bill for breach of any of the conditions of assistance is merely the recovery of the grant and the advance; but obviously that would not set things right in case of levy of rents exceeding the prescribed maxima or admission of tenants able to pay more than the prescribed rents. The high rent would still be charged; the wrong tenants would still be left in possession; and the object of the scheme, viz., the re-housing of the ill-housed at rents within their means, would be defeated.

A more effective sanction can be provided, if among the conditions of public assistance is the condition that the houses shall be erected on the local authority's estate. The regulations (as to maximum rents and class of tenants) that may be necessary to secure the houses to the tenants for whose benefit the assistance is given can then be enforced as conditions of the ground lease. The local authorities are not likely to be driven to re-entry; but, if they should be, they can then bring in tenants of the right class at the stipulated rents. The regulations can be varied with changing circumstances by agreement between house-owners and local authorities; but both the original regulations and any variations should be thoroughly advertised, so that public objections may be duly considered before the regulations or variations are adopted.

The Housing, Town-Planning, etc., Act, 1919, makes it easy for local authorities to acquire land for housing estates, and thereby assist and encourage pioneer developers by securing the permanency of healthy residential surroundings, and obviating that risk of depreciation which results from overcrowding land with a conglomeration of both residential and commercial or industrial buildings. In my opinion the local authorities of all large or growing towns would be well advised to acquire large suburban areas suitable for development as residential estates; to lay out thereon, at least, as many house sites as are required to make good the present shortage of houses; and to announce their intention of letting these sites on 999 years' leases, at low ground rents, to anyone who will build the houses needed, with or without the assistance permitted by the new Bill. Those who accept public assistance must accept the prescribed conditions of lease as to limitation of rents and selection of tenants; others will be free to do what they like with their houses, provided that they build them to plans approved by the local authority, and complete them within, say, two years.

If private builders do not come forward to lease the sites and construct the smaller types of houses under the State-aided scheme to the required number, it will be clear that the circumstances in which, under the new Bill, the local authority may themselves build, instead of relying wholly on private enterprise, have come into existence. The local authority may then take up their scheme for themselves section by section, always giving private builders, including public utility societies, the opportunity to come in at any stage on a new section; but whether they leave the building to private enterprise or do it themselves they must see that the houses built include a sufficiency of the types that the people in actual need of relief from bad housing conditions require, and that these are let to those same people at rents which they can afford to pay.

HOUSING CONFERENCE IN THE NORTH.

A HOUSING conference of Northumberland and Durham local authorities was held in Newcastle recently, Councillor James Smith, chairman of the Newcastle Corporation Housing Committee, occupying the chair. Mr. Henry R. Aldridge, secretary of the Town Planning Council, discussed the new Bill, paying particular attention to the misunderstanding which existed as to the responsibility of local authorities in augmenting the State subsidy for housing. He pointed out that the Bill contemplated that whether the local authority assisted private enterprise or provided the dwellings themselves, an annual charge would fall on the rates. If 20,000 houses were erected, and the rate contribution amounted on the average to as much as £5 per house, the charge falling upon the rates would be £600,000 per year for 20 years. They must accept it for granted that the Treasury would not allow them to adopt the attitude of simply dispensing Exchequer money, either for their own schemes or for private enterprise, without they themselves making a contribution. In his opinion the Government was correct in expecting local bodies to accept part of the responsibility. It was sound in principle, even if it might be unpopular. The speaker produced figures as to the cost of erection of non-parlour houses, and said that if they were let at 7s. per week, a penny rate in Newcastle would cover the local authority liability for nearly 2,000 houses.

Answering questions, Mr. Aldridge said the Council had been pressing for an increased Exchequer contribution for rural areas, and there was a prospect of special legislation to meet this requirement. Industrial and mining areas, too, he considered could not be left without special assistance. In the building industry key men were very urgently required, and greater inducements must be offered to attract men to the trade. He considered that nothing was more antiquated nor more against the best interests of housing than the system of apprenticeship in the building trade.

Welsh Housing and Development Association, to impart information on sanitation, housing, and town development, has arranged illustrated lectures.

BOOK REVIEWS.

English Country Life and Work. By ERNEST C. PULBROOK. London: B. T. Batsford, Ltd., 94, High Holborn. Price 16s. net.

The subject of Mr. Pulbrook's book on English country life is no less important than extensive, and gains in interest both from its own wonderful variety and its close connection with the life of millions of town-bred Englishmen, who understand little or nothing about it.

As Mr. Pulbrook explains, the countrymen of England cannot be grouped together as a peasant class; their activities are far too specialised to permit of sweeping generalisations coming anywhere within hail of the facts. It is only with the spread of education that the local differences in speech and manners are dying out with the ancient pageantry and traditional country lore. A lover of the country as it is, Mr. Pulbrook has little good to say in favour of modern science, and does not seem to look forward to the day when rural England will be one intelligently conducted model farm, where nature has been tamed out of her wildness and all paths made straight. However wasteful and inefficient country ways may be they possess a charm that is possibly a necessary compensation for the arduous nature of agricultural pursuits.

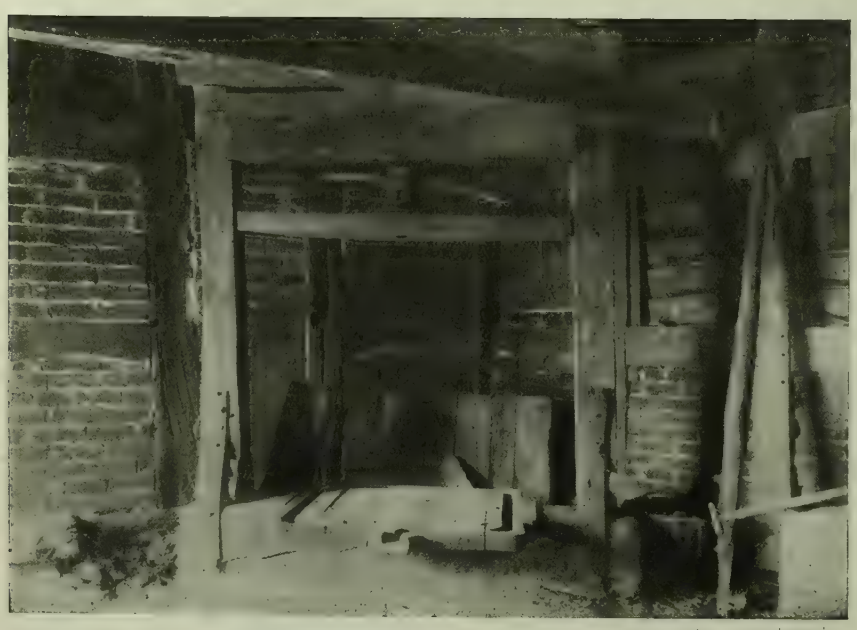
The financial loss due to waste of time and material in negotiating deep mud in the lanes and bye-ways must be far greater than would cover the cost of a metalled cart track, but the substitution of the cheap and efficient tar-mac for the clay and the primroses would also involve a spiritual readjustment in the Englishman's ideas of beauty if it were to be tolerated for a moment.

But though the same ruts have to be negotiated year after year, and hard as country life can be, it has the advantage of encouraging practical efficiency in many minor ways, and keeping alive just those faculties of resourcefulness that become atrophied in the life of the factory hand.

Of country crafts Mr. Pulbrook writes:—

"When we see some of the beautiful things the old craftsmen have handed down to us, it is sad to think that the machine is supplanting the hand working in conjunction with the brain, and that the great factory is taking the place of the individual workshop. The solitary worker, the master and his few assistants, are usually real craftsmen, whereas the factory-hand is the slave to a process, the unnoticed cog in a big machine doing the same thing again and again under identical conditions."

This doctrine of individual interest in doing good work was preached a century ago by Thos. Love Peacock, in his novel "Melincourt," but the difficulty of bringing up young people to take a pride in skilful production is enormously increased by the fact that the monetary return is often less for thoughtful work than for merely mechanical machine-minding. Only the most conservative or the consciously philosophical find themselves in a position to reject the call of higher wages, realising that money coupled with hard conditions is no improvement, and that intelligence and independence would be sacrificed in vain.



There is another side to the question also, for while men of spirit prefer to direct their labours for themselves, others find in a dull routine relief from the necessity of taking the trouble to think, and, while this vegetable outlook on life is favoured in the factory, it is penalised in the country where it comes into competition with the tendency of the other ill weeds to grow apace.

Mr. Pulbrook's book, however, is a descriptive work and makes no pretence of following all effects to their remote causes, and his remarks upon the changes in the countryside in recent times are often justified by hard and very unpleasant facts, as when he finds that "education seems to have been more successful in eradicating useful knowledge than in destroying superstition."

The author's obvious preference for the countryside in its wilder state betrays itself from time to time in his pages, and he is probably too optimistic in his estimate of the possibilities of the west country orchard.

English country life and work are faithfully chronicled in the two hundred and thirty-six pages of the book, which contains some extremely beautiful illustrations taken from photographs. The patience and skill of the photographer in snapping at the right instant has had the happiest possible results.

Many of the illustrations include moving objects, but the definition seldom leaves anything to be desired. Scenes containing teams of horses, yokes of oxen, flocks of sheep, poultry, to say nothing of human beings at work or play, have been faithfully reproduced in a manner that is now artistic and, with the changes that have been going on rapidly during and since the war, will soon become historical.

An Old-Fashioned Cider Mill

A Concise Explanation of Lord Birkenhead's Act (The Law of Property Act, 1922). By SIR ARTHUR UNDERHILL, LL.D., Bencher of Lincoln's Inn, and Senior Conveyancing Counsel of the Court, &c. London: Butterworth & Co. 1922. Price 10s. 6d. net.

The Law of Property Act, 1922, is no ordinary Act, but it is an attempt to simplify the law of real property and personal estate and thus to amend the law which has been the growth of ages. To quote the title of the Act itself, it is an Act "to assimilate and amend the law of real and personal estate to abolish copyhold and other special tenures, to amend the law relating to commonable lands and of intestacy and to amend the Wills Act, 1827, the Settled Lands Acts, 1882 to 1890, the Trustee Act, 1893, and the Land Transfer Acts, 1875 and 1897." This Act of "assimilation" occupies in the Law Reports 312 pages, which is a severe task for the digestion of any reader, and as the little work before us consists of about 130 pages of larger print than the Law Reports, and also contains an index, any reader will turn to it with a sense of relief. The author in his preface points out that there are two kinds of professional knowledge, viz., "a general and habitual knowledge of the broad principles of law, and a knowledge of where to find when wanted the minute details of the law," and that this work is confined to the first of these classes. As we have referred to the length of the Statute we should perhaps point out that the author in these pages assures us that "the pith and marrow" of the Act is not so voluminous as at first sight it would appear, as that portion containing the amendments of the various Acts mentioned in the title will be removed eventually from the Act and form a series of consolidating Statutes. The author states that this work is founded on certain lectures recently delivered by him at Lincoln's Inn. In the first chapter he gives an historical sketch of the law of real property from early days to the present time, and in the following chapters he shows how the present Act is to operate in simplifying the law. Those who have regarded the 312 pages occupied by this Statute in their Law Reports with awe will be surprised to find that the subject has been treated by the author not only in so small a space, but that his lucid and witty style has rendered even this tough subject interesting and attractive, and those who require what is all that the author has set himself to provide them with—"a general knowledge of the broad principles of the law" as it is affected by this Statute—cannot do better than study this little volume.

Italian Renaissance Architecture. By GEORGES GROMORT, Ecoles des Beaux Arts, Paris. Translated from the French by GEORGE F. WATERS. London: John Tiranti & Co. Printed in France MCMXXII. Full cloth, 20s.; paper wrapper, 17s. 6d.

M. Georges Gromort is an enthusiast in his subject, and the apology for the survival of Renaissance art to the present day contained in the last pages of his book, "Italian Renaissance Architecture," supplies the key to his other remarks upon the works described in the text and illustrated in photographs and measured drawings reproduced in eighty plates. "A form of art," he writes, "could not be imposed upon a people, in a lasting form, except given a mass of affinities, to be met with in traditions, customs, language and literature. It has been said of 'style' that it is the 'man himself.' It can be said of 'style' in architecture that it is the people or the race itself, at a given period in its evolution. If the influence of the Renaissance still succeeds with us to inspire, from time to time, a great work, it proves that we have preserved to a certain extent the spirit of that strong race which brought forth in the fifteenth century the Bramantes and the Brunellesches."

Whatever faults may be found by purists in the Renaissance—and Ruskin had a great deal to say on this head—it had the merit of possessing a firm foundation in popular interest. Our repetition of its forms and even of its formulæ at the present time is justified by their suitability,

From "English Country Life and Work."

An Old Barn.

if not to a perfect state of architectural existence, at any rate to the state we live in.

Like his great compatriot, Zola, whose novel "Rome" should be read by all architects who wish to understand something of the spirit of that mighty city, M. Gromort comprehends the grandiose tradition embodied in such enormous works as the Duomo of Florence and St. Peter's at Rome, of which latter building he says: "Here indeed is the *great work* of the Renaissance, and without doubt the most important production of modern times. Other compositions have perhaps equalled it in grandeur or surpass it in purity of execution, but none has been so completely a résumé of the civilisation of two whole centuries, nor, above all, the realisation by means of novel architectural forms, of a programme at once so imposing and so new. Only the harmonious *ensemble* of Versailles might be seriously compared to it. They are both works of equal interest, inspired by a similar motive, that of raising a durable monument to the glory of the Papacy or of the monarchy. . . . To begin with, St. Peter's is something more than a church; it is not right to judge it as such."

Just as Zola saw in the building the spirit of the old Roman Emperor-gods uniting religious and temporal power, M. Gromort also compares it to the works of ancient Rome. "It is an immense *Basilica*, in the Latin sense of the word, a place of reunion for a host of pilgrims, a waiting hall for the whole of Christendom. . . . Perhaps the Imperial Forums and their great Basilicas, in the first centuries of our era, aimed also at giving to passing strangers, to colonists of the Roman provinces, the impression of clearly established power. . . . Bramante was hardly mistaken, and it was the Basilica of Constantine which seemed to him, from the first, the proper monument from which to draw his inspiration."

The otherwise excellent production of the book is marred by an unusual number of trivial misprints, but the many interesting illustrations alone would render the book a valuable addition to any architect's library, and the measured elevations and full face photographs of these Renaissance buildings permit of analysis of their dimensions and geometrical proportions in a manner likely to be of great use to students.

"*The Studio*" *Year Book of Decorative Art*, 1923. 7s. 6d. and 10s. 6d.

This volume edited by Geoffry Holme, deals with the numerous and essential objects and fitments for the house and garden. In the architectural section many of our architects, well known for the excellence of their domestic work, are represented by exterior and interior views of their executed buildings, many in colour. The latest work by Continental architects is also shown in a similar manner, enabling an interesting study to be made of their ideas of design and construction. In the furniture the percentage of well-designed pieces is small, and there is considerable room for improvement before the standard of the old pieces is attained. The English section is pre-eminently first. Many of the Continental pieces are odd and freakish and repel rather than attract, but presumably this is a record of the vogue of to-day. The pottery section is strongly represented, some of the pots are excellent, others crude. In conclusion, we may add, the garden and garden furniture section is one of the most interesting.

The Organ. A quarterly review for its makers, its players and its lovers. No. 5, Vol. II., quarto, July, 1922. (London: "Musical Opinion," 13, Chichester Rents, W.C. 2. Price 2s.)

The first of the seven articles in this book is by the Rev. Andrew Freeman, Mus.Bac., F.R.C.O., upon "The Organs of Old St. Paul's." Mr. Freeman points out that our knowledge of them is almost entirely conjectural, since the records were destroyed in the Great Fire of 1666. William Beton, who was at work between 1518 and 1552, built an organ for the Cathedral. It stood on the north side of the choir in the third bay over the stalls. It had a Gothic case with carved gables, and folding doors at either side. In 1694, the Dean and Chapter, the Surveyor of Works, Sir Christopher Wren, and Dr. John Blow, the organist, gave an order to Bernard Smith to make a large organ of 21 stops, with all ornaments, carvings and gildings, for the sum of £2,000. This was the beginning of the present organ. Sir Christopher urged that it should stand in the bay, as the old one did, but the Dean and Chapter insisted upon a central position over the screen. Wren accordingly designed the present extremely beautiful case, with east and west fronts, and it was placed on the screen.

The main case was 30 ft. high, 18 ft. wide, and 8 ft. deep. It was provided with glass window sashes, which were supposed to be drawn down when the organ was not in use. They were removed in 1826. The case was made by Charles Hopson, and the carving was by Grinling Gibbons. The choir screen was taken down in 1859, so that the whole building might be available for services. The organ was placed in the second bay over the stalls on the north side of the choir, Mr. Hill carrying out the work. In 1871-2 the organ was rebuilt, enlarged and divided, as we now see it, by Messrs. Henry Willis. The original east front was placed on the north side, and the west front on the south. Francis Penrose, the Cathedral architect, supervised the alterations, while certain carving, designed by him, was carried out by Messrs. Cubitt & Co.

A fine drawing by Mr. H. T. Lilley shows the east front as it stood from 1697 to 1826, when the window sashes were removed. Specifications of the various organs and accounts of four subsidiary organs are appended. The great Schulze organ at Armley, Leeds, is dealt with by Mr. T. E. Pearson, who speaks about it *con amore*, pointing out its defects, but eulogises its many beautiful qualities. There are three fine photographs which demand some attention.

The book is worthy of a place in the library of all lovers of the organ. It is well printed on good paper with large margins; in fact, its qualities, style and price will ensure its success. It is enriched with specifications, and ten beautiful photographs, which are given on art paper.

A Herefordshire Cider Mill.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

The Metropolitan District of the Institution of Municipal and County Engineers met at Horsham Town Hall on Friday last week, after which members and friends inspected places and works of interest in the borough, under the guidance of Mr. G. S. Atkinson, Surveyor and Water Engineer.

The Town Hall was inspected with considerable interest. Except for the embattled front bearing the Royal and other arms, it was erected in 1812, on the site of the original structure built some four hundred years earlier, and the building was sold to the town in 1888 by the Duke of Norfolk for £25. The roads of the district were inspected by the party. A section of North-street, it was explained, was recoated in January last with tarred slag, containing 10 per cent. bitumen, at a cost of 5s. 6d. per sq. yd., including the scarifying and shaping of old metal; while surface tarring on all the classified roads and a large proportion of the district roads for the past two years cost 3.68 and 2.74 shillings per sq. yd. respectively.

The urban housing scheme has been carried out on a site of about 5½ acres in Oakhill-road. Eight parlour and forty-two non-parlour type houses have been erected, and eight more are to be built to complete the scheme. The materials used were obtained locally, as far as possible, the cottages being built of stock bricks and roofed with sand-faced tiles, and they are so constructed that the cost of up-keep shall be as low as possible. The houses were built when prices were at their zenith, and cost £43,881, including drainage and fencing. Two cottages of the non-parlour type have been erected at the sewage pumping station, the cost of which was £1,024, including demolition of an old house. The cubical contents is 22,950 ft., and the floor area 855 ft. super. to each cottage.

Prior to the starting of the existing water works in 1865 by a private company, the town was supplied with water from the River Arun, by means of pumps worked by a water wheel, the water being conveyed in wooden pipes. These works were in operation about 1735. Improvements were made in 1877, when a service reservoir of 500,000 gallons capacity was constructed. As time went on and demands for water increased, further improvements were made. The scheme has now been completed and to-day all the pumping is done by electricity generated in the Council's own works, though the steam plant is being retained in case of emergency.

At the invitation of the Sussex Brick and Estates Co., Ltd., the party gathered at "The Black Horse" Hotel, where luncheon was presided over by Mr. W. Wenhan Smith, chairman of the company. In proposing the health of the Municipal and County Engineers, the Chairman said there never was a time when the profession had more important problems to solve. Living, as we were, in more and more congested areas, we were only enabled to do so by the valuable service rendered to the community by the engineers. Those meetings brought them together, and they were able to discuss questions which appeared difficult, though the brick trade was solving its problems separately.

Mr. F. Wilkinson (Willesden Council) replied for the Institution.

The toast of the day—"The Sussex Brick and Estates Co., Ltd."—was given by Mr. F. J. Wood (County Surveyor, East Sussex), who asked the company to drink to the health of the chairman, coupled with the name of Mr. Whitehouse.

Mr. P. E. Harvey (Worthing) proposed "The Horsham Urban District Council," Mr. G. S. Atkinson replying.

After lunch a visit was paid to the Engineering School at Christ's Hospital, *en route* for Southwater Engineering Works, where facing and engineering bricks are manufactured from clay and shale from the Wealden clay measures, at one time known as the oak tree clay. The raw material, which is dug by hand, is drawn up to the pans in small trucks; and the bricks, some 900,000 per week, are produced from one kind of clay, in the making of which 15,000 tons of coal are consumed weekly. Two hundred men and boys are employed in these extensive works, which are picturesquely situated.

The visitors returned to the hotel for tea, after which a vote of thanks to the hosts was proposed by Mr. E. F. Spurrell, Hon. District Secretary.

This was seconded by Mr. A. S. E. Ackermann, B.Sc. (Eng.), who, in making a reference to "making bricks without straw," described the method employed in Egypt in ancient days. The straw was soaked in water till it rotted in order to extract the tannic acid; this liquid was mixed with the clay to bind it, and the same acid was used at the present time.

Amongst those present at the day's proceedings were Messrs. C. A. Austin, S. Evans, H. S. Wood, K. F. Spurrell, C. G. Atkinson, C. Chambers-Smith, L. G. Dashper, W. R. Guilford, F. J. Wood, A. S. E. Ackermann, P. E. Harvey, C. F. Williamson, F. Wilkinson, R. Chart, G. T. Cottrell, C. W. Giles, W. Wenhan Smith, J. Stewart Whitehouse, and D. Hayden Whitehouse.

THE RENT ACT.

Costs.

The case, Wolff *v.* Smith, recently heard in the High Court, raises an interesting point under the Rent Act. The plaintiff had been a weekly tenant of certain premises, but, some twelve months before the cause of action arose, had been given a legal notice to quit, and therefore was a "statutory tenant." The action was brought in the High Court, the plaintiff claiming an injunction as against the landlord in respect of a trespass. This case of trespass seems to have arisen out of a misunderstanding, for the plaintiff had left the premises, and the defendant had understood he was giving up possession and had entered the premises, stacked the furniture, and done other acts acting on this assumption. The Court had held that the defendant was mistaken as to the plaintiff having given notice of intention to quit and had awarded nominal damages on the defendant undertaking to reinstate the plaintiff in possession.

The question now before the Court was one of costs, for section 17, sub-section (2) of the Act provides: "A county court shall have jurisdiction to deal with any claim or other proceedings arising out of this Act or any of the provisions thereof, notwithstanding that by reason of the amount of the claim or otherwise the case would not, but for this provision, be within the jurisdiction of a county court, and if a person takes proceedings under this Act in the High Court, which he could have taken in the county court, he shall not be entitled to recover any costs."

The amount here was within the county court jurisdiction, but that did not conclude the question, because the point taken was that these proceedings were not taken under the Act at all, but were an action for trespass independent of the Act. That point was met by showing that in a claim for trespass the plaintiff must show the right to possession, and to prove this he must rely on the Act, and when, as here, he is a statutory tenant, for he could only show his right by pleading the Act, and therefore his claim rose under the Act. But upon this a further point arose, for it was contended that the plaintiff was not a statutory tenant because the notice to quit had been given twelve months before, and the defendant had continued to receive rent, and therefore under section 16, subsection (3) a new agreement was created. That subsection is: "Where the landlord of any dwelling-house to which this Act applies has served a notice to quit on the tenant, the acceptance of rent by the landlord for a period not exceeding three months from the expiration of the notice to quit shall not be deemed to prejudice any right to the possession of such premises, and if any order for possession is made any payment of rent so accepted shall be treated as mesne profits." The Court was at first impressed by this argument, but in the result followed the decision given in Shuter *v.* Hersch (1922, 1 K.B., 438, *The Builder*, July 28, 1922) that this subsection had not the effect that was contended here, *i.e.*, that a fresh tenancy had been created by waiver, and therefore it was held that the action was one under the Rent Act, and by virtue of section 17 the plaintiff was not entitled to any costs.

No satisfactory interpretation has ever been placed upon section 16, subsection (3). All that has been held is that it does not create a waiver of notice to quit even when rent is received for a longer period than the three months prescribed in the subsection, and it is curious that this point did not receive attention in the Rent (Notice of Increase) Act of this year. We dealt very thoroughly with this subsection in our article July 28, 1922, and it will be remembered that in Shuter *v.* Hersch it was suggested by the Court it had been inserted in the Act on the recommendation of the Rent Commission when Hartell *v.* Blackler (*The Builder*, July 20, 1920) was law. That case decided that receipt of rent even from a statutory tenant would waive a notice to quit, but this case was not followed in Davies *v.* Bristow (*The Builder*, August 26, 1921) where it was held that the principle of waiver could not apply to statutory tenants who were only in occupation against their landlord's will under the Rent Act.

We have frequently drawn attention to the fact that this subsection does away with the principle enunciated in this latter case and that it causes confusion, and we wonder that the legislature has not dealt with the point in the recent Rent Bills. It would be absurd to compel a landlord who has a tenant forced upon him and must receive his rent to give a fresh notice to quit every three months, but under this subsection that is the really only safe course to adopt.

Statutory Tenant's Right to Assign.

Just as the Rent Bill has passed its third reading, a point has been decided by a Divisional Court in two cases, Keeves *v.* Dean and Nunn *v.* Pellegrini (*The Times*, July 14), which appear to give another cause of complaint to landlords. It is unnecessary to set out all the facts; it is sufficient to say that in both cases an assignment of the premises had been made by statutory tenants; but in the second case the subsidiary point was raised that the assignment was bad because it had not been made by deed.

The decision of the Divisional Court is of extreme importance, and it amounts to this: The right to assign must depend upon section 15 of the Act of 1920, which provides that the statutory tenant shall, "so long as he retains possession, observe, and be entitled to the benefit of, all the terms and conditions of the original contract of tenancy so far as the same are consistent with the provisions of this Act . . ." The Court interpreted this section as giving the statutory tenant the right to assign, unless in the original contract of tenancy there was some express provision dealing with the question of assignment. If there was some such provision, the tenant would be bound to observe it, but, in the absence of some such provision, it must be implied that the tenant could assign.

Now the Rent Acts apply to many houses where there is no formal contract of tenancy, and the result of this decision will be that every weekly tenant and every tenant not bound by covenant is at liberty to assign the premises which he is holding after a legal notice to quit and against the will of the landlord. This is such a manifest injustice, we trust it may yet be remedied, for the Rent Bill is not yet through Parliament, and an amendment to meet the case could still be introduced in the House of Lords. As regards the subsidiary point, the form of assignment, it was held that this was a case in which the absence of a deed could, under the equitable jurisdiction of the Court, be given relief from, and thus, in both cases, the assignment by the statutory tenant was upheld.

INTERNATIONAL ROAD CONGRESSES.

Mr. Rees Jeffreys, Chairman of the Roads Improvement Association, and a member of the Permanent International Commission responsible for the organisation of the International Road Congresses, has addressed a letter to the County Councils Association, the Institution of Municipal and County Engineers, and other organisations represented at the Fourth (Seville) International Congress, asking their observations upon certain proposals directed to increase the usefulness of these Congresses to British road engineers. These suggestions for modifying the procedure of the Fifth and subsequent Congresses are practically a summary of those made to Mr. Rees Jeffreys in his capacity as Chairman of the British Committee by British delegates at the Seville Congress, and they are as follows:—

(1) That the Congresses shall be held only in readily accessible capital cities where interesting and modern forms of highway construction can be examined. (2) That there shall be more business meetings so as to enable all the members, and not only the Government delegates, to take part in discussions and debates. (3) That purely sight-seeing excursions be eliminated and their place be taken by road and other inspections of interest to road engineers. (4) That formal meetings and courtesy speeches be reduced to a minimum, and social functions confined to the evenings. (5) That the general reports and resolutions should be circulated at least three weeks before the Congress. (6) That the resolutions which form the basis of discussion shall be framed by persons who are recognised internationally as leading authorities on the subject to be discussed. (7) That an adequate paid secretarial staff shall be attached to the British delegation. (8) That time and facilities shall be provided to allow the representatives from the same countries to meet informally in order to enable them to co-ordinate their views on the resolutions and to draft resolutions and amendments which they desire to move. (9) That seats on the platform during the debates on the papers shall be provided only for (*a*) the chairman, (*b*) the general reporter, (*c*) secretaries of organising committees, and (*d*) translators—the rest of the Government delegates taking their seats with other members of the Congress in the body of the meeting.

A meeting of the Permanent International Commission will be held shortly in Paris to consider an invitation which has been received from the Italian Government that the next Congress—the fifth of the series—shall be held in Italy. Before voting for or against the acceptance of this invitation, Mr. Rees Jeffreys wishes first to obtain the opinions of the principal British organisations supporting the Association, in case they desire that he should propose on their behalf any changes in the policy pursued in selecting the venue of the Road Congresses, as well as in the procedure adopted at its meetings.

ROYAL SANITARY INSTITUTE.

Programme for Conference at Hull.

The Thirty-fourth Congress and Health Exhibition of the Royal Sanitary Institute is to be held at Hull from July 30 to August 4, under the presidency of the Right Hon. T. R. Ferens, P.C., J.P., High Steward of Hull. Nearly 500 delegates have been appointed, and many representatives of public health bodies are expected. The following Government departments have appointed delegates to the Congress: Admiralty; Board of Control, England; H.M. Office of Works; War Office; Scottish Board of Health; Ministry of Health. Foreign and Dominion Governments and Municipalities are also sending representatives as follows: Bombay; South Australia, New South Wales, Victoria; Brisbane; Perth; New Zealand; Christchurch, New Zealand; Capetown; Kimberley; South Africa; Czecho-Slovakia; Greece; Mexico; United States of America. In addition, many of the members of the Institute (which total over 5,000) will be attending.

The Congress will be opened by the President's inaugural address, followed by lectures. There will be conferences on sanitary science, engineering and architecture, maternity and child welfare (including school hygiene), personal and domestic hygiene, attended by representatives of sanitary authorities, port sanitary authorities, medical officers of health, engineers and surveyors to public authorities, veterinary inspectors, sanitary inspectors, and health visitors. An exhibition of apparatus and appliances relating to health and of domestic use will be also held in connection with the Congress.

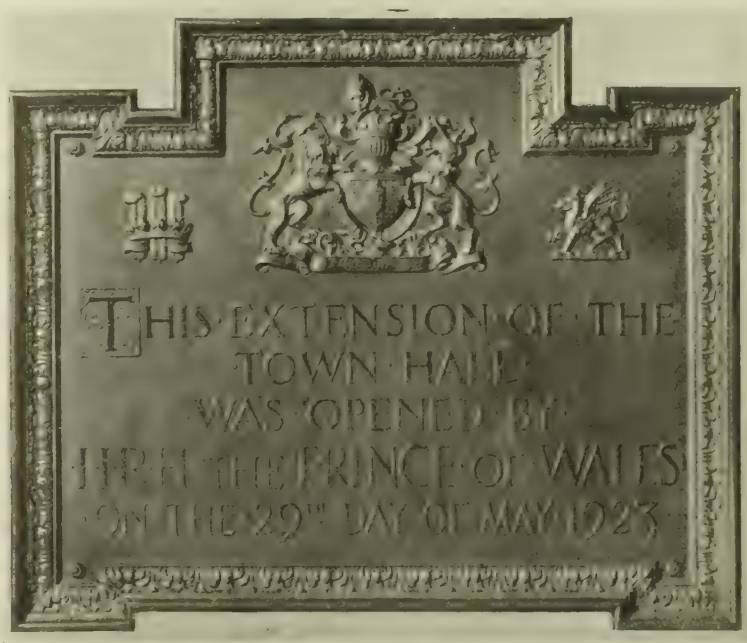
The following is a list of Members and Associates, elected July, 1923:—

Members.—Mr. G. R. Bruce, M.A., M.D., D.P.H. (M.O.H.), (Hastings), Mr. J. H. Contractor, L.R.C.P. & S. (Edin.), D.P.H. (Assistant Medical Officer, Rangoon), Mr. N. B. Cran (Salisbury, S. Rhodesia), Mr. D. Forbes, M.B.E., M.D., B.Sc., D.P.H. (M.O.H.), (Brighton), Mr. G. T. Hill (Letchworth), Mr. B. S. Joshi, M.B., B.S. (Bombay), (Matunga, Bombay), Mr. B. Mohanti, B.E.(Cal.), (Patna, India), Mr. E. S. O'Brien, B.A., B.E., M.Inst.C.E.I. (Belmont Park, Western Australia), Mr. J. Robertson, M.B., M.S., D.P.H. (M.O.H.), (Darwen), Mr. G. R. Whale (Pretoria), Mr. R. J. Williams, A.M.Inst.M.& C.E. (Gillingham, Kent).

Associates.—Mr. B. T. Bailey (Southsea), Mr. H. L. Baty (Birkenhead) Mr. E. G. Carey (Krugersdorp), Mr. I. E. Clark (Langport, Somerset), Mr. D. Cuthbertson (Leonora, W. Australia), Mr. E. M. Denbury (Abergavenny), Mr. G. L. Evatt (Syston, near Leicester), Mr. J. N. Hughes (Sherwood Rise, Nottingham), Mr. J. W. Lewis (Hamilton, New Zealand), Mr. B. R. Madge (Pontardawe, Glam.), Mr. W. S. Marshall, (Treorchy, Glam.), Miss K. M. D. Oliker (Glenageary, Co. Dublin), Mr. J. W. Phillips (Pinelands, near Cape Town), Mr. S. M. Pillay (Rangoon), Mr. O. Pincock (Erith), Mr. G. Rae (Salt River, South Africa), Mr. C. W. Smith, B.A., A.R.I.B.A. (Cambridge), Mr. A. C. Swim (Brisbane), Mr. D. I. Treharne (Llanelly), Mr. C. W. Walsh (Streatham).

The Right Hon. Viscount Burnham has accepted the office of Vice-President of the Institute.

SHEFFIELD TOWN HALL EXTENSION.



The Sheffield Town Hall extension was opened by the Prince of Wales on June 29. The original portion of the Town Hall, which was designed by the late Mr. E. W. Mountford, was opened by Queen Victoria in May, 1897.

The new building has frontages to Norfolk-street and to the open space of St. Paul's churchyard, and connects the earlier portions of the structure. While the site is only about one fourth of the whole, the floor area of the extension is nearly half that of the original building. This has been attained by increasing the height of the main frontage to seven stories above the basement. The accommodation provided includes new Council library and conference rooms, with rates collecting hall, and new and extended offices for various departments, some of which previously occupied premises outside the Town Hall. This work began in 1914, suspended in 1916 on account of war, was resumed in 1919 and is now practically completed, the estimated cost being about £120,000.

The principal contractors were as follows:—

General contractors, Messrs. G. Longden & Son, Ltd.; structural steelwork, Messrs. Walter Scott, Ltd., Leeds Steel Works; heating and ventilation, The Brightside Foundry & Engineering Co., Ltd.; slating, Proctor & Son; plastering and tiling, Hodkin & Jones, Ltd.; plumbing and glazing, H. Braithwaite & Co., Ltd.; painting, F. Naylor, Ltd.; electric installation, Corporation Electric Supply Dept.; metal casements and dome, Mellowes & Co., Ltd.; leaded glazing, Robertson & Russell, Ltd.; mosaic paving, Rust's Vitreous Mosaic Co.; fireproof floors, Kleine Syndicate, Ltd.; fireplaces and ironwork, H. E. Hoole & Co., Ltd.; J. W. Wilson and Hydes & Wigfull; sanitary fittings, Twyfords, Ltd.; stone and wood carving, F. Tory & Sons; asphalte, Claridges Asphalte Co. and The Limmer Co., Ltd.; strong room doors, Ratners, Ltd.; marble work, Walton, Goody & Cripps and Burke & Co.; office fittings, John Walsh, Ltd. The Clerks of Works were Mr. G. Prebble and Mr. F. W. McInnes.

The new building was designed by and erected under the supervision of Mr. F. E. P. Edwards, F.R.I.B.A.

Commemoration Tablet, Sheffield Town Hall Extension.
Mr. F. E. P. Edwards, F.R.I.B.A., City Architect.

THE BUILDING TRADE.

ESTIMATING FOR SMALL BUILDERS—III.

By J. H. BARNS, F.I.O.B.

CARPENTER.

For readily dealing with this trade it is essential that an estimator be fully conversant with the methods of squaring dimensions. These may be generally stated as methods of arriving at the superficial area or cubical contents of any piece of timber, either by cross multiplication, duodecimals, or other system. These are commonly taught in schools and are generally known, but even the most experienced will find new uses for these systems of multiplication if they would only spend a little time in restudying the subject. Upon a price per standard of timber being stated an estimator should be able by simple mental arithmetic to state the price per ft. run of door frame. Problems in mental arithmetic, however, do not come within the scope of this article.

Analysis of prices for carpenter's work must be dealt with under two main divisions—"material" and "labour." The cost of "material" would depend upon the size and quality of wood selected. There are over 80 sizes of deal ordinarily imported into this country, and a very large number of firms import some or all of these sizes, each having their own standard of quality, so that in dealing fully with the question of prices some hundreds of rates must be dealt with. This is quite impossible for practical purposes, and an average of the size or quality of timber required should be taken. The size of timber required may possibly be found from the quantities. The specification will probably state the quality required. Timber is sometimes specified to come from ports which do not now export timber. It is useless for anyone to expect to buy first quality Archangel deal to satisfy the requirements of all estimates, as there is not sufficient of this quality of wood coming into London to satisfy the requirements of the largest building firms. Timber merchants will not sell first quality wood without a much greater quantity of lower qualities is purchased. The estimator must, therefore, find out what quality of timber will satisfy the customer, and quote accordingly. The best way to acquire information as to the value of timber, is carefully to examine the four or five different qualities of the very best deal, such as Archangel, you may have access to, note its chief characteristics and its price, and after some experience you may be able to arrive at some idea of the value of the quality of the timber required for the job. Before the War, some of the outstanding characteristics of Archangel deal were as follows :—

1st quality.—A few centres, a few small knots, occasionally a little sap, slight shakes.

2nd quality.—A proportion with centres, knots a size larger, more sap, and shakes.

3rd quality.—Centres, definite shake on one side, pith, larger knots, proportion of sap. Suitable for medium class joinery or good class carcasing.

4th quality.—Centres, large knots (usually termed coarse), sap, proportion of waney edge, shakes.

Unsorted is usually a quality between 3rd and 4th.

5th quality.—A few knots, little sap, cross shakes, dote, a little waney edge, or dead sap.

The quality of imported timber has not improved since the War. The batten sizes of timber present a more attractive appearance than the deal and plank scantlings, but the stuff is less mature. If an estimator will construct a table on the above lines from his own observations, he will find it of great value. One can form an opinion of the quality of timber by reversing the procedure, as if a first quality deal is offered at £30 per standard and the price of 4th quality Archangel or similar grade wood is £30 per standard, it may be reasonably inferred that the first quality wood offered is equal to 4th quality of some well-known firm's goods. The cost of timber, apart from quality, will depend chiefly upon the size, as deal 11 in. wide would be very much dearer per ft. cube than wood 6 in. wide.

The following are a few examples to show the variation in prices. The prices are not given with the intention of quoting the lowest market rates, as it is presumed that the estimator will know these from his ordinary sources of supply and he will, therefore, be able to keep in touch with the ordinary fluctuations of the market, although the prices quoted for labour and material are those current in London at the present time :—

Quality.	3″×11″	3″×9″	3″×8″ & 3″×7″	2″×11″	2″×9″	2″×7″
Equal to 1st Archangel yellow deal	£72	£65	£47	£72	£67	£47
2nd	60	56	42	60	56	40
3rd	38	38	30	47	44	30
4th	29	29	26	32	32	25
Inferior brands of deal from various ports	26	25	22	26	27	22

Prices are per Petersburg standard at the docks, and to which must be added the cost of delivery. Timber stored under sheds in docks is likely to be in a better condition than that stacked in the open yard.

The principal imported sizes of deal are: 11 in., 9 in., 8 in., 7½ in., 7 in., 6½ in., 6 in., 5½ in., 5 in., 4½ in., 4 in. wide, and ½ in., ¾ in., 1 in., 1¼ in., 1½ in., 2 in., 2½ in., 3 in. and 4 in. thick. The hammer marks or brands on timber are convenient for identification. Imported sizes of timber less than 7 in. wide are usually immature and are often of inferior quality. A Petersburg standard contains 165 cu. ft., and at 1s. per cu. ft. would cost £8 5s. per standard, or could be roughly stated at £8 per standard. £48 per standard would be 6s. per ft. cube, and 6d. per ft. run of 4 in. by 3 in. On these lines one can easily arrive at the approximate price per ft. run of scantling when the price per standard is known. To state the matter in another way, by what is known as the inch by inch method, 6s. per ft. cube represents a ½d. on every sq. in. of sectional area; therefore, 4 in. by 3 in. = 12 sq. in. sectional area at ½d. per in. = 6d. Similar results can be obtained by cross multiplication.

A square of boarding= 100 super ft. One square of 1 in. boarding is roughly one-twentieth of a standard, so that if deal were £30 per standard it would equal 30s. per square 1 in. thick. The method of arriving at the price per square of ¾ in. or 1¼ in. boarding on these lines is obvious. Imported planed boards are usually sold at the same prices as unplaned boards of the same mark, and it would, therefore, seem that no charge is made for planing, whereas planed boards are more expensive because they are usually about one grade lower in quality than unplaned boards. Unplaned boards hold up the full thickness of wood, whereas in the case of 1 in. prepared boards they would be about 13–16 in. finish.

Example (feet cube fir in plates and lintels) :—

The scantling of the fir is not usually stated, but will probably be about 4 in. by 3 in. The 4 in. by 3 in. imported size is of inferior quality, and for a decent job they would have to be cut out of, say, 3 in. by 8 in., equal to 3rd Archangel.

Feet.	s.	d.
6 run 3 in. by 8 in. deal, at 4s.	4	0
6 ,, flat cutting, say		2
Waste, 5 per cent., say		2
Labour fixing	1	7
	5	11
Add profit and oncosts, 15 per cent.		10
Per ft. cu.	6	9

The cost of labour will necessarily depend upon the class of work, supervision, and many other factors, and must be verified. It would also depend upon the sectional area of the timber to be fixed, as the larger sized timbers will cost relatively less per cu. ft. to fix than the smaller ones. In practice it would cost just as much to fix a 4 in. by 3 in. plate as it would a 4½ in. by 3 in., so therefore all one's calculations on the subject are of little avail. The only possible method of pricing labours when the sizes are not stated is to take them at an average price per ft. cube, or if they are stated, somewhat on these lines :—

	Per ft. cube
18 in. and under square section	1s. 7d.
From 18 in. to 36 in. ditto	1s. 6d.
From 36 in. to 81 in. square end section	1s. 5d.

Example (feet cube fir framed in floors) :—

Fixing wooden joists is worth about 2d. per ft. cube more than fir in wall plates. The cost of framing cannot be exactly stated, as no indication is usually given in the description of quantities of the amount of framing required. Fir framed in joists may mean that every joist is to be framed (that is, mortised and tenoned or otherwise worked), or it may mean that only one joist on a floor has to be framed. Framing is worth from 8d. to 2s. per ft. cube.

Sometimes the description of the timber required in the estimate does not exactly state that imported sizes are to be used, but some form of wording is inserted which leaves the matter in doubt whether imported sizes of deal or fir sawn out of baulk timber are required. Where the wording of the description of the timber is ambiguous, it may fairly be presumed that for items in estimate of fir in plates, or framed in floors and roofs (as rafters), imported sizes can be used. If, however, one description covers both roof and roof trusses, presume one-third would be out of baulk timber. Space will not permit of an analysis of cost subsequent upon conversion and cutting timber, although it may roughly be stated at 30 per cent. on the first cost of timber.

Example (feet cube fir framed in roof trusses) :—

1 cu. ft. sawn timber	5s.	6d.
Waste (in fixing), say, 5 per cent.		3d.
Labour, say	2s.	6d.
	8s.	3d.
Add profit and oncosts, 15 per cent.	1s.	3d.
Per ft. cu.	9s.	6d.

Example—Squares — sup. flat boarded centering for concrete floors and all necessary cutting to 10 ft. story and striking when directed :—

1 sq. 1¼ in. boarding, say, 35s. sq.		£1	15 0
4–10 ft. (40 ft.) 4 in. by 3 in heads	3 ft. 4 in		
12–9 ft. (108 ft.) 4 in. by 2 in. struts	6 ft. 0 in.		
	ft. cu.		
	9 ft. 4 in. 3s. 6d.	1	12 8
Wedges, &c.			2 0
Total cost		£3	9 8
If used three times		1	3 3
Carpenter, 5 hours at 1s. 7½d.			8 1½
Labourer, 5 hours at 1s. 2¼d.			6 2
		£1	17 6½
15 per cent.			5 8
Per square		£2	3 2½

With care the timber may be re-used three or four times. There are many methods of spacing timbers, &c., but the above quantity should suffice. If hanging irons are used, cost would be similar. The cost of labour will depend upon how the centering is fixed against girders, &c. (the above is a simple form). Casing to form temporary beams would cost about 50 per cent. more than above for labour. Timber would cost more, as wider stuff would be used.

Example (feet— sup. centering to segmental apertures):—

A centre 3 ft. 6 in. long and 14 in. wide would girt about 3 ft. 9 in. by 1 ft. 2 in. = 4 ft. 4 in. super.

2– 3 ft. 6 in. 5 in. by 1½ in. deal sides, say	1s. 6d.
23– 1 ft. 2 in. 1 in. by 1 in. lagging ..	10d.
Nails	1d.
Cost of material, 4 ft. 4 in. super	2s. 5d.
Material per ft. super. ..	6½d.
Labour, say, ...	1s. 0d.
Ft. super	1s. 6½d.

Charge for use of struts can be set against credit of timber. It may be possible to re-use centres for other openings on the job.

Add profit and oncosts.

Example (squares — sup. 2 in. by ¾ in. slating battens for Countess slating, 3 in. lap. Battens would be 8½ in. centres) :—

14–10 fts = 140 ft. batten, say.. ..	5s. 0d.
5 per cent. waste	3d.
½ lb. nails..	3d.
Carpenter, 2 hours at 1s. 7½d... ..	3s. 3d.
Per sq...	8s. 9d.

Add profit and oncosts.

2 in. by ¾ in. imported slating battens can be purchased for about 2s. 1d. per 100 ft. run.

[Note.—In Article II, col. 2, line 26, for 500 bricks read 50.]

BUILDING TRADE HOURS.

The official returns from the building trade unions on the proposed change of working hours were issued this week. The proposals were :—

No. 1.—Are you in favour of establishing in the national working rule agreement a variation of the present working week, and setting up what is known as the "spread over," 44 hours weeks, by a longer working week in the eight summer months, 44 hours for two months, and 41½ hours for two months ?

No. 2.—Are you in favour of maintaining the present maximum 44 hours week for ten months, and 41½ hours for two months ?

Proposal No. 1	12,772
Proposal No. 2	118,504
Majority against	105,732

Individual unions voted as follow :—

STANDARD RENT.

There seems some point in a letter dated June 5, by Mr. W. H. Devenish, and which recently appeared in *The Times*, on the subject of standard rent under the Rent Act. He points out that, in the definition of "standard rent," the Act does not take into consideration whether on August 3, 1914, the tenancy was an old tenancy or a new one, and whether it was or was not a repairing lease or only a yearly tenancy, and he gave examples of the result of treating all houses, whatever the tenancy, alike.

At the time the legislation was instituted it only applied to houses which from their character were likely not to be let on leases compelling tenants to repair, and in 1920, in the new Act, some attempt was made to deal with this question by allowing a greater increase of rent where the landlord was responsible for the whole of the repairs. So part of the grievance has to some extent been met, as some difference is now made between a repairing lease and a non-repairing lease where the landlord is responsible for the whole of the repairs. Where, however, the tenant is responsible for part of the repairs the twenty-five per cent. has to be reduced, and in such cases the standard rent clearly does not take into consideration the difference between a tenancy existing in 1914 where a tenant is liable for some repair and a tenant is liable for no repairs at all.

As regards Mr. Devenish's first point, that no account is taken as to the age or currency of the lease or agreement as at the date fixed by the Act, no attempt at all has been made to deal with this question, yet, as Mr. Devenish points out, it has a very important bearing on the rent. No one conversant with house property, in London especially, can fail to recognise that the rent of a house in 1914 at the end of a lease, and the rent of one held on a lease then just renewed or granted, would be very different, and it can only be assumed when the Legislature adopted this rough test it was never imagined that the legislation would be extended and continued for long after the war had ended, but the effect has been not to fix rents on any commercial basis as at August, 1914, but to create an arbitrary standard rent for all houses let on that date, although the leases may date from long before that date.

With the extension of the Acts to houses of higher values and the prolongation of the Acts for so long a period this injustice has become more apparent, but remedy can hardly be looked for when houses are treated as so many counters in a political game.

NEW BUILDINGS IN LONDON.

Edgware-road.—Cinema.—Plans of the new Grand Cinema have been approved by the L.C.C., and it is hoped to proceed with the work at an early date. No contracts have been entered into in respect of the new building. The architects are Messrs. W. G. R. Sprague & W. H. Barton, of 2, Clement's Inn, Strand, W.C.2.

Tottenham Court-road.—Shops and Flats.—Messrs. Y. J. Lovell & Son are erecting shops and flats at 114–115, Tottenham Court-road, under the superintendence of Mr. A. H. Middleton, architect. It is a four-storied building with Bath stone entrance and dressings with main elevation to Tottenham Court-road.

Lewisham.—Plans passed by B.C.: Two houses, Cranston-road, for A. Fitzsimmons; three houses, Belmont-hill, for L. Shore; house, Winn-road, for S. J. Judd; house, Winn-road, for C. Cutler & Son; house, Winn-road, for J. G. Whitcombe; cinema, High-street, for Sir C. T. Ruthen & Co.; nine houses, Rushford-road, for A. J. Glock.

Tottenham Court-road.—New Building.—Messrs. Catesby's, Ltd., have acquired the site on which stood for many years the well-known public house, "The Talbot." On this site they are to erect an eight-story building, which will link up their present extensive premises in Tottenham Court-road, Goodge-street, and Whitfield-street. The builder is Mr. T. Shillitoe, and the architects, Messrs. H. A. & A. S. Whitburn.

Oxford-street.—Building.—Shops and offices are being erected at the corner of Oxford-street and Lumley-street. The building will have a 56 ft. frontage to Oxford-street and 100 ft. to Lumley-street, and will be five stories high (not including basement). Steel frame construction, fronts faced with Portland stone, and cast-iron panels with windows between the piers. Sub-contracts already let include :— Constructional steelwork, Messrs. A. D. Dawnay & Sons, Ltd.; stonework, Messrs. F. J. Barnes, Ltd.; cast-iron fronts, Messrs. Walter Macfarlane & Co.; electric lighting and heating, Messrs. Duncan Watson & Co. General contractors: Messrs. F. D. Huntington, Ltd. Architect: Mr. G. Thrale Jell, A.R.I.B.A.

BRISTOL HOUSING SCHEME.

The report of the Housing Committee, presented at the last meeting of the Bristol City Council, recommended the granting of a lease to the Great Western Railway Co. of a portion of the City's housing estate at Knowle for the erection of 50 houses, subject to the payment of an annual ground rent of £3 12s. 6d. per plot. The company had agreed to erect 26 parlour houses and 24 non-parlour houses in accordance with plans, which have been approved by the Corporation. The houses will be of a similar type to those already erected on the estate. The Committee reported that tenders had been accepted for the erection of 160 houses on Fishponds, Knowle, Luckwell-road and Highbury-road sites. For non-parlour houses the lowest price received was £325 per house, and the maximum price for parlour houses was a little less than £400. The prices were one-third of what they were some little time ago. The Chairman drew attention to the fact that non-parlour houses at £325 were semi-detached houses, whereas the contract price for terrace houses was £350. The last portion of the report dealt with a pamphlet which had been prepared relative to the assistance to be given to private enterprise. The Committee had prepared five different schemes and, at a meeting of the master builders in the city, which had been well attended, the feeling was expressed on the part of all present that they should do everything they could to co-operate in the building of houses. A copy of the pamphlet had been sent to each local builder. The report was adopted by the Council.

Housing in America.

In face of the abnormal demand for housing, new building operations in the United States suffered a further setback in June. According to *Bradstreets* (quoted by *The Times* New York correspondent) permits for construction were valued at $225,090,818 (about £49,000,000) for that month, against $263,044,107 (about £57,000,000) for May. For June, 1923, they show a lower total than for the corresponding month of 1922. The contraction is due to scarcity and the extraordinarily high cost both of labour and building materials. In New York City, where the need for many additional school buildings is pressing, Mayor Hylan has called a mass meeting of bricklayers and masons to devise a way of getting the schools built. The labour unions some time ago promised to furnish men to work on school building at $12 (52s.) a day, but were unable to keep their promise because the average wage on the other jobs was $16 (nearly 70s.). In the Police Force and in the City Departments are many former bricklayers and masons. To these the City is offering leave of absence if they will ply their old trades in school building until the emergency has passed.

THE WEEK IN PARLIAMENT.

WESTMINSTER, *Wednesday.*

The Housing Bill.

DURING Committee stage of the Housing (No. 2) Bill, in the House of Lords, Lord Crawford moved the addition of a new clause, which, he said, authorised the preparation of town-planning schemes in places where there is a special interest, whether architectural, historic or artistic. This could only apply to a very small number of areas in this country, but those areas were in many ways the most interesting and most historic in Britain, and as such were most deserving of consideration. The clause provided in a very modest fashion an opportunity of preserving the historic character of such places.

Lord Onslow, on behalf of the Government, accepted the new clause, which was added to the Bill.

Some discussion took place on an amendment moved by the Bishop of Southwark to limit the number of houses to be built to twelve per acre. He pointed out that there was nothing in the Bill to prevent the building of fifty houses to the acre. There was thus a real danger that there might be overcrowding in the building of houses which were good in themselves. They had to take care that they did not create new slums and problems for the future.

Lord Onslow said the Government could not accept the amendment, although they were in sympathy with its objects. If it were carried, the building of houses would be delayed, and the Government thought it better that the question should be left to the local authorities.

The amendment was negatived.

The Rent Bill.

In spite of a motion for its rejection, moved by the Labour Members, the Rent Bill has passed the third reading in the House of Commons by 212 votes to 111—Government majority 101. Mr. Chamberlain, after replying to a number of points of detail, said the measure was, he believed, generally recognised as an honest attempt to hold the balance fairly between all parties, and he looked forward with confidence to the future, which would be the only true test of the Bill.

Lead Poisoning.

In the course of a debate on the Home Office Vote, a number of Members called attention to the growth of lead poisoning among painters, and urged the Government to put into force the Geneva Convention with regard to the use of white lead.

Mr. Locker-Lampson, Under Secretary to the Home Office, after stating that until misunderstandings had been cleared up it was difficult to put the Convention into force, said he understood that a new process involving the use of wet sand-paper had been invented by means of which the old dangers arising from dry rubbing down could be prevented. It was absolutely essential that further experiments should be made with this new material before a decision was come to.

Price of Building Materials.

Mr. A. T. Davies asked the Minister whether he was aware that since the publication of the Government housing proposals the prices of good, sound building timber, iron and steel bars, glass, white-lead paint, red-lead paint, and other essential building materials had been considerably raised; and whether any means were being adopted to protect builders from these prices?

Mr. N. Chamberlain said the fluctuations in prices of materials from April to June of this year would be seen in the schedule attached to the first interim report by the Committee on the Cost of Building Materials. For the most part prices had remained constant. Fluctuations had, however, occurred in different areas and in certain materials, but had included reductions as well as increases in price.

Sir W. de Frece asked the Minister whether, in view of the certain shortage of building material, he would consider the desirability of employing available and serviceable unemployed labour on schemes of increasing output.

Lord E. Percy, who replied, said there was no evidence at present of any general shortage of building materials, but he had no doubt that manufacturers would increase the employment of serviceable labour up to the limits of their output capacity if they were warranted in so doing by the demand for their products.

Cost of Building.

Mr. N. Chamberlain informed Mr. T. Thomson that the highest monthly averages of cost of building per square foot were as follows:—

	s.	d.
Non-parlour type for September, 1920	20	8¾
Parlour type for October, 1920 ..	19	3

Individual figures did not exceed 22s. per square foot save in a few very exceptional cases. During the last six months tenders at or about 7s. per square foot for both types of houses had been approved, and these might be taken as representing the lowest figures reached. Returns of tenders accepted by local authorities under the new scheme were not yet available, but such tenders as had been referred to the Ministry did not indicate any general departure from the figures of the last six months.

Answering a further question, Mr. N. Chamberlain said that for the last twelve months contracts had usually been let at lump sum prices without quantities and without allowance for fluctuations in rates of labour or prices of materials. No rent data were accordingly available for arriving at any reliable average percentages of the cost of whole work represented by the various trades engaged in building. The percentages varied considerably according to the design of the individual house, the locality and the period and general conclusions could not be drawn from individual examples. An estimate made in the summer of 1921 from a number of examples gave the following average figures for the percentages of the total cost:—

	Per cent.
Excavator, Concretor, &c. ..	7
Bricklayer, &c.	35
Carpenter and Joiner	22
Slater and Tiler	8
Plasterer	9
Plumber and Glazier	12
Painter	4
Sundries	3
	100

Hours Taken in Building.

Mr. N. Chamberlain informed Mr. T. Thomson that complete records of the numbers of hours occupied in the erection of houses were not available. The general tendency was, however, indicated in the following figures obtained from an analysis of the figures for four schemes for which continuous records were kept over a long period. In these schemes the highest recorded average figure was 4,664 hours per house in respect of houses completed in the quarter ending December, 1921, while the lowest comparable figure was 2,711 hours per house for houses completed in the quarter ending March, 1923. The reduction in hours during this period was continuous and fairly regular.

The Subsidy.

Replying to a number of questions, Mr. N. Chamberlain said that there was no authority for the statement that the grant by the State of £6 per house for 20 years would be dependent on the local authority making a contribution out of the local rates. Where the local authority, with his approval, themselves erected houses complying with the Bill, the Government grant would in all cases be £6 for 20 years. Where the local authority granted assistance to private enterprise, the Government grant would be £6 for 20 years if the total assistance so granted was equal to or greater than the equivalent of this annual payment. If the total assistance granted to private enterprise was less than the equivalent of £6 for 20 years, the Government contribution, in accordance with the latter part of the proviso to Clause 1 of the Bill, would be the equivalent of the total assistance actually granted.

Wooden Houses.

Lieutenant-Commander Kenworthy asked the Minister of Health whether, in view of the fact that the shortage of houses would still be acute at the end of this year, he proposed to continue in force the relaxed bye-laws of the Ministry of Health with regard to wooden houses beyond that date.

Mr. N. Chamberlain said that section 25 of the Housing, Town Planning, &c., Act, 1919, which enabled local authorities during a limited period to consent to the erection and use of buildings notwithstanding the provisions of building by-laws, was at present in force till December 31, 1923. Provision had been made in the Expiring Laws Continuance Bill to extend the operation of the section for another year. A person aggrieved by the neglect or refusal of a local authority to give a consent under the section had a right of appeal to the Minister of Health.

Schemes in Surrey.

Mr. N. Chamberlain informed Mr. Ede that schemes have been submitted under the new Housing Bill by Guildford Town Council and Caterham Urban District Council for the erection of 110 houses and 20 houses respectively by the local authorities, and by Maldens and Coombe Urban District Council for the erection of 302 houses by private enterprise. The scheme proposed by Caterham had been approved. The others were under consideration, and a decision would be given shortly.

Brick Prices.

Mr. N. Chamberlain informed Mr. D. G. Somerville that the question of brick prices was engaging the attention of the Committee on Building Materials Prices, who would report further on this subject at an early date. The last published price for Fletton and best and second-hand stock bricks delivered in London was £2 13s. 3d. and £4 2s. and £3 17s. per 1,000. From the published market rates it did not appear that any increase in the price of Fletton bricks delivered to King's Cross had been recorded for some considerable time. It was known that there was a great demand for Fletton bricks in the South of England, and that the manufacturers were making great efforts to meet it.

Housing Loans.

Mr. Emlyn-Jones asked the Minister whether, in view of the fact that local authorities were able to obtain loans for housing purposes at 4¾ per cent. or less, and that the present rate at which they were authorised to intending borrowers under the Small Dwellings Acquisition Acts, viz., 5½ per cent., tended to limit the number of possible house purchasers under the Act, he would issue an order permitting loans to be granted at 5 per cent.?

Mr. N. Chamberlain said the present general rate was 5½ per cent., but lower rates had been fixed in special cases, and he was prepared to consider any case where the local authority were of opinion that 5 per cent. is an adequate rate for their area.

Contract Prices.

Mr. T. Thomson asked what was the average contract prices at the present date for non-parlour and parlour houses, exclusive of lands, roads, sewers?

Mr. N. Chamberlain said that complete information was not yet available, but tenders submitted to him in May and June have ranged from £277 to £400 for non-parlour houses and from £329 10s. to £444 for parlour houses.

Office of Works Staff.

Sir J. Baird, First Commissioner of Works, informed Sir H. Brittain that the professional, administrative and clerical staff of his Department numbered 1,786, and cost in salary and wages approximately £580,000 per annum. In 1913 the number was 655 and the cost approximately £148,000.

NEW BUILDINGS IN SCOTLAND.

Falkirk.—Club House.—The Dean of Guild Court has passed plans for a club house at the new golf course at an estimated cost of £1,550, and for extensions to properties involving an expenditure of £2,000 in all.

Aberdeen.—Various.—Twelve plans, involving an expenditure of £6,405, have been passed by the Plans and Sewerage Committee of the Town Council. The principal one was for additions to Elmhill House, Cornhill-road, submitted on behalf of the directors of the Royal Aberdeen Mental Hospital, which is estimated to cost £2,000. Another plan which was submitted by the Aberdeen Picture Palaces, Ltd., for extensions and alterations to the Globe Picture House, estimated to cost £1,500, was also passed. The list included a house in Broomhill-road for Mr. P. Smith, Newlands, to cost £1,100. The Aberdeen Race Meetings, Ltd., had a plan for a spectators' stand at Seaton House to cost £500. The remainder were for extensions and alterations to existing premises. The Aberdeen Education Authority has been recommended to pass plans for a memorial pavilion to be erected on the Grammar School playground at Rubislaw.

Lanarkshire.—House.—The District Committee of the Middle Ward of Lanarkshire propose that a new programme for the provision of additional houses should be undertaken as soon as possible, subject to the necessary consents. The Committee propose, under the new housing subsidy, to make a lump sum payment to private builders and themselves to undertake the completion of their original scheme propounded in 1919. They also propose that a scheme for slum clearance should be commenced without delay. The total number of houses involved is over 2,000.

Leith.—Houses.—The Corporation has been recommended to erect 30 additional houses at Sheriff Brae, Leith.

Edinburgh.—Various.—Permission has been given to erect a garage in Lochrin Place-lane, at an estimated cost of £3,000, and to convert a house at 41, Moray-place into three small houses. The Dean of Guild Court has passed the following plans: A. Bremner, to erect three double-flatted cottages at Davidson's Mains; Henry Burnet, to erect a bungalow at Davidson's Mains; Peter Cameron, to erect a bungalow and garage at Milton-road, Portobello; Miss M. Clark, to erect a bungalow and garage at Drum Brae, Corstorphine; Craiglockhart Building Co., to erect 12 self-contained houses at Lockhart-avenue; Mrs. J. B. Gibson, to erect a dwelling-house at Duddingston; R. Scott Millar, to erect dwelling house and garage at Barnton; George Graham & Sons, to erect four semi-detached houses at St. Alban's-road; Spylaw Building Association, to erect two villas at Barnshot-road, Colinton. Edinburgh Corporation: To erect three blocks of three-storied tenements (three-roomed houses), at Hope-street, Corstorphine; the Plans and Works Committee has resolved to proceed with the erection of washhouses at Abbeymount at an estimated cost of £15,000.

Brechin.—Schools.—The Education Authority has approved expenditure of £380 in connection with the reorganisation of the High School and Bank-street School. One-third of the amount is for structural alterations, and the remainder for furnishings.

Cults.—Public Hall.—A scheme is on foot for a public hall at Cults, Aberdeenshire. Plans have been prepared for the new building by Brown & Watt, Aberdeen.

Kirkcaldy.—Education Offices.—The Fife Education Authority has approved of the extension to their offices at Kirkcaldy, at an estimated cost of £7,800.

Lochgilphead.—School.—At a meeting of the Argyllshire Education Authority at Campbeltown, the master of works was requested to prepare plans for a new junior school at Lochgilphead, and also alternative plans for the improvement of the existing building.

RATES OF WAGES IN THE BUILDING TRADE.

The following are the rates of wages in the building trade in England and Wales. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Masons'	Bricklayers'	Plasterers Labourers.
Aberdare	1/7	1/7	1/7	1/7	1/7	1/7	1/7			1 2½
Accrington	1/7	1/7	1/7	1/7	1/7	1/7	1/7			1 2½

(For rates of wages in the Building Trade in Scotland, see page 110.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING AND PAINTING.

JULY 21.—**Camrose (Pemb.).**—ERECTION OF MANSE.—For erecting a new manse at Camrose (Pemb.), for the Trustees of Camrose Baptist Chapel. The Secretary, Elm Cottage, Camrose.

JULY 21.—**Colchester.**—HOSPITAL BLOCK.—Erection of a new out-patients' block at the Essex County Hospital, Colchester. Mr. W. T. Cressall, A.R.I.B.A., and Mr. Duncan W. Clark, A.R.I.B.A., joint architects, Colchester. Deposit £2 2s.

JULY 21.—**Cudworth and Darfield.**—PAINTING.—Tenders are invited for the external painting and repairs of Council Schools at Cudworth and Darfield. Messrs. G. J. Gibbs, Education Offices, Cudworth.

JULY 21.—**Elgin.**—HOUSES.—Tenders are invited for various works in connection with the erection of one block of four houses in Maisondieu-road, Elgin, for the T.C. Mr. A. G. Cockburn, Town Clerk.

★NO DATE.—**Rawmarsh.**—First-class Assistant required by the U.D.C. The Surveyor, Parkgate, near Rotherham.

PROPOSED NEW BUILDINGS & OTHER WORKS.

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations:—T.C. for Town Council; U.D.C. for Urban District Council; R.D.C for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; L.C.C. for London County Council; B.C. for Borough Council; and P.C. for Parish Council.

ABERDARE.—The Aberdare U.D.C. has decided to join the Mountain Ash U.D.C. in purchase of Aberdare Canal from private owners for clearing out as a sanitary measure. The Mountain Ash Council requires its portion in connection with development of a housing scheme, whilst Aberdare Council may construct a road in the future in bed; schemes respectively estimated £98,000 and £50,000 (approximately) have already been prepared for a road construction.

ABERDEEN.—Plans passed by T.C.: Alterations, 25, Westfield-terrace, for Mr. Lauchlan Mackinnon, jun., per Mr. A. H. L. Mackinnon; additions, Royal Mental Hospital, Cornhill-road, for the Directors, per Mr. James Anderson; reconstruction of shop fronts, 105-109, Holburn-street, for Mr. William M'Donald: addition to calendar winding-house, Donside Paper Mills, for the Donside Paper Co., Ltd.; alterations, 159, Crown-street, for Mrs. Brown, 52, Bon-Accord-street, per Messrs. Brown & Watt; extension of tea-room, 23-25, Union-street, for Mitchell & Muil, Ltd., per Messrs. Wilson & Walker; house, Broomhill-road, for Mr. Peter Smith, per Messrs. Sutherland & George; alterations, Nos. 7-13, Waverley-place, for Mr. George A. Stephen, per Mr. George Watt: alterations to hall on the south side of Leadside-road, for the Loyal Order of Ancient Shepherds, per Mr. A. H. L. Mackinnon: club-room on the north side of Oakhill-road, for the 25th Troop Boy Scouts, per Mr. Thomas C. Young, C.A.

ABERYSTWYTH.—Plans passed by T.C.: Ten semi-detached villas on land at Penporke, for Messrs. Russell & Moseley, of Walsall; plans submitted, but referred for amendment: House in St. David-road, for Messrs. Edwards Bros.; houses in Upper Caradog-road, for Mr. R. Davies.

ALFRISTON.—The Ministry of Health has refused to sanction plans of 10 new houses proposed by the R.D.C. on the ground that the accommodation is not up to the standard required, and the cost unnecessarily high.

ASHBY WOLDS.—Addition to shop, Ashby-road, for Mr. Woodward.

ASPATRIA.—The U.D.C. has passed a plan for Mr. Oldfield, architect, for a house in Station-road, for Mr. J. Johnston.

AYLESBURY.—Plans passed by T.C.: Alterations to premises, 34, High-street, for G. Cannon: alterations, 10, Temple-square, for Dr. Perrin; new shop front, Temple-street, for G. Smith; two cottages, Havelock-street, for A. W. Hadaway; alterations, Britannia-street, for F. Longley; new timber sheds, Exchange-street, for R. P. Richards & Co.

BARNSLEY.—Plans passed by T.C.: A. Dunk, extension to garage, Victoria-crescent; W. Ibbotson, garage at rear of 3, Greenwood-terrace; Ezra Edson, dwelling-house, Barbro' Hills-road; T. Armitage, three lock-up shops, Summer-lane; James Clarke, dwelling-house, Cockerham-lane: E. Gothard, two dwelling-houses, Smithy Green-road; Markwell & Austin, two dwelling-houses, Middlesex-street; C. F. Moxon, dwelling-house, Cockerham-lane; O. Freeman & H. Potter, two dwelling-houses, Dodworth-road; G. Fenton, dwelling-house, Carlton-road, Smithies.

BATLEY.—Subject to the present Housing Bill becoming law, the Corporation propose to grant a special subsidy of £75 per house upon all houses erected for them which comply with Government requirements.——The Batley and District Hospital Board have decided to proceed with the full scheme of extensions at an estimated cost of about £14,000. Mr. W. Hanstock, of Batley, is the architect.——Plans for alterations at the Maternity Home, to provide further sleeping accommodation for members of the staff, are to be submitted for the approval of the Ministry of Health.

BEDFORD.—Plans passed by T.C.: Mr. K. Gammell, for J. Lovell & Son, offices and flat, Newnham-street; Mr. A. W. G. Prosser, for Mr. J. Smith, garage, 3, St. George's-road: Mr. E. H. C. Inskip, for Mr. T. Ambridge, additions, Ampthill-road; Mr. W. E. G. Hull, for Mr. W. Goldsmith, two houses, London-road: Mr. J. B. Thomas, for Mr. W. J. Bennett, villa, Park-road North: Messrs. Usher & Anthony, for Mr. F. Gale, alterations, 24, Mill-street; Mr. F. Corby, two houses, Bradgate-road; Messrs. H. Young & Son for Mr. E. Bristowe, garage, St. Cuthbert's-street; Mr. E. H. C. Inskip, for Mr. A. T. Covington, house, Goldington-road; Mr. J. B. Thomas, for Mr. W. T. Lansberry, bungalow, London-road; Mr. J. B. Thomas, for Capt. F. Corner, villa, St. Albans-road.

BEDWELLTY.—It was reported to U.D.C. that Powell Duffryn Coal Co. would erect bridge over road in connection with colliery tipping. The U.D.C. is acting jointly with Mynyddislwyn Council in soliciting from B. & M. Railway Co. a new station in the Pengam district additional to the present one.

BELFAST.—Plans passed: Alterations to house and shop, Cliftonville-road, for R. Herron: house, Hillsborough-drive, for J. Elliott: additions to hall, Alfred-street, for Rev. John Canon McKinley: store, Montrose-street, for S. Boyd: stand to football grounds, Ormeau-road, for North of Ireland Football and Cricket Club, Ltd.: factory, Bain's-place, for the Newforth Weaving Co., Ltd.: alterations to premises, Donegall-square North, for the Belfast Banking Co., Ltd.: house, Newtownards-road Upper for T. J. Robinson: dye house, Springfield-road, for the Springfield Dye and Finishing Co., Ltd.: Parochial Hall, Gracehill-street, for Rev. J. MacAuley: shop and house, Crimea-street, for Miss A. Finnigan; two houses, University-avenue, for J. M. Nelson and Mrs. A. Orage; house, Sans Souci Park, for Miss A. Hamill; two houses, Ravenhill-road, for R. J. Kerr: shop and house, Foundry-street, for J. McKenna; conversion of workshops into offices in Fountain-street, for W. Coates & Sons, Ltd.; stores, Norwood-street, for W. D. Breathwaith & Sons; two houses, Ravenhill-road, for G. F. Thompson; four houses, Falls-road, for the White Cross Building Society, Ltd.; nine motor sheds, Dunmore, Antrim-road, for the O. D. Cars, Ltd.; alterations to shop and house, Oldpark-road, for S. Halliday; four houses, College Park, Belmont, for R. S. Sutcliffe; additions to hall, Antrim-road and Brookvale-avenue, for Brookville Masonic Hall Co., Ltd.; additions to hall, Beersbridge-road, for Grove Baptist Hall Committee; golf pavilion, Westland-road, for Cliftonville Golf Club, Ltd.; store, Ann-street, for Jamison & Green, Ltd.; house, Deramore Park, for R. E. Corry; shop and house, Springfield and Whiterock-roads, for Mr. R. Cullinan, Mr. W. I. Convery, architect; two houses, Luxor-gardens, for Mr. F. W. Hall, Mr. James Scott, B.E., architect; conversion of house into shop and house, Lisburn-road, for Mr. G. Fletcher, Mr. James Scott, B.E., architect; extension of house, Lansdowne-road, for Mr. A. H. Muir, Mr. John Seeds, architect: addition to Baptist Church, Great Victoria-street, Mr. James A. Hanna, architect; shop and house, Newtownards-road Upper, for Mr. R. McIlroy, Messrs. Coates & Sons, Mr. R. I. Calwell, architect; house, Stranmillis-road, for Mr. R. A. Rutherford, Mr. R. Barton, architect; additions to house, Marlborough Park, for Mrs. A. E. Young, Mr. T. Callender, architect; addition to Masonic Hall, Antrim-road, for the Brookville Masonic Hall Co., Mr. D. W. Boyd, architect: sheds and building yard, in Roden-street, for Messrs. J. & R. Thompson; premises, Marlborough-avenue, for Messrs. Walter Munn & Co., Mr. James Scott, B.E., architect.

BLACKBURN.—Plans passed by T.C.: Houses, Preston Old-road, by Mr. Harper Southworth: well house, Smithies-street, by the Blackburn Brewery Co., Ltd.; scullery, 24, Bell-street, by Mr. Kenan; addition, 6, Trinity-street, by Mr. S. Cob; two bungalows, Pleckgate, by Mr. J. Whalley; garage, "Netherwood," Preston New-road, by Mr. J. Rutherford: addition to laundry, Pleckgate, by Messrs. Haydock Bros.; addition to shop, 76, Heys-lane, by Messrs. Dutton & Hindle.

BLYTH.—An inquiry has been held into the application of the T.C. for power to borrow £7,200 for a new fire station.

BOGNOR.—Application is to be made by the U.D.C. for sanction to borrow a further £3,000 to complete the pavilion: it is also intended to borrow up to £5,000, for the completion of the sewage contract.

BOOTHFERRY.—The West Riding County Council Highways Committee has approved the proposal to erect a bridge over the River Ouse at Boothferry, and agreed to contribute a sum not exceeding £30,000 towards the estimated cost of £100,000.

BREDBURY AND ROMILEY.—Plans passed by U.D.C.: Two houses, Stockport-road, Bredbury, for Mr. Allcock and Miss Dewhurst; house, Hyde-road, Mr. G. F. Jeffries: bungalow, Gilbert Bank, Mr. H. Swinfin: bungalow, Compstall-road, Mr. J. F. Chaplin: additions, "Summer Hill," Sandy-lane, Mr. E. Taylor: additions to works, Messrs. J. E. Wards, Ltd.

BRIDGE.—Plans for bungalows at Charing Field, Petham, and Iffin-lane, for Mr. F. A. Smith; for a house, near Shelvin Farm, Barham, for Mr. Austin: and for a house at Kingstone, for Mr. F. C. Clarke, have been approved by the R.D.C.

BRIDGEND.—Plans passed by U.D.C.: Bungalow, Grove-road, for Mr. Stanley Lewis. The U.D.C. has requested Board of Guardians to make up road in front of workhouse and take back boundary wall to conform with submitted plans. Mr. W. Welbury, Electrical Engineer to the Penybont (Bridgend) R.D.C. has advised Council to amend draft of order for supply powers so as to include sanction to erect a generating station. The Penybont R.D.C. has put forward for grant following road works: Road improvement, Oldcastle, to near Emeny Chapel (estimate for work of 1¼ miles), with widening to 21 ft. at cost £10,000, with macadaming: junction of Pont Alum and Ogmore roads at £1,000, and improvement Roger's-road, Larleston at £1,000; total estimated cost £12,000 with additional work to be done at Arcade-road, Pencoed.—The Penybont Council, having provided site for erection of public hall at Llangynwyd, has now decided to fix a time-limit for construction of hall or withdraw site. It was stated that delay in grant from Miners' Welfare Fund has caused delay in contracting out the work of erection.

BRIGHTON.—The E.C. has approved the proposal to build a new girls' secondary school on the Varndean Estate at a cost of £63,800. Provision is made for accommodating 535 scholars, the building to include 23 classrooms, three laboratories, cookery and workrooms, assembly hall, gymnasium, dining-room, staff rooms, &c.——It is proposed to erect a war memorial in the churchyard of the old Church of St. Nicholas.

BUILTH WELLS.—The U.D.C. has agreed to bear half cost of erection of bridge at Nantstalwyn and work will shortly be put in hand.

BULKINGTON.—Plans passed by U.D.C.: Bungalow, Nuneaton-road, for Mr. J. T. Atkins.

BURTON-ON-TRENT.—A proposal to construct a garden village near Burton, on the lines of Bournville, has been made by Lieut.-Col. H. E. Disbrowe-Wise, of Walton Hall.——Messrs. Connsmaker & Armstrong, architects, of Burton-on-Trent, are in communication with the Tutbury R.D.C. as to the sewering of a somewhat extensive area of land between Branstone and Barton Turns. They are acting on behalf of Colonel Wise, the owner. The area involved is about 40 acres, and it is probable that 90 houses will be erected on sites of approximately half-an-acre per house.

CAERPHILLY.—An inquiry has been conducted by Ministry of Health representative into application of U.D.C. for sanction to borrow and expend £5,900 on acquiring Bronhiw, Caerphilly, and grounds for conversion, at £8,000, estimated cost, into Council offices. Some opposition was made, with alte.native suggestion put forward that present Council office should be extended and altered. Announcement of result will be made in due course.

CARLISLE.—Plans passed by R.D.C.: Messrs. Stead, McAlpine, Cummersdale, for two semi-detached houses at Cummersdale: Mr. S. Stewart, architect, Botchergate, Carlisle, on behalf of Mr. G. Cullen, Whitecloseagate, house at Houghton.

CARMARTHENSHIRE.—The County Public Health Committee has adopted recommendation of County Medical Officer that provision be made forthwith of hospital for smallpox isolation, there being none at present.—The Llandovery Borough Council has selected site for proposed new cottage hospital near Llanfair Cottage Farm.—The Carmarthen R.D.C. has adopted road schemes submitted by respective district surveyors as follows: District of Mr. G. Protheroe, estimated £9,786: Mr. W. E. Jones, £10,913 17s. 6d.: and Mr. E. Morgan (after revision), £10,000: and grants have been applied for in respect of works entailed. The County Standing Joint Committee has submitted plans for two houses for police at Llandovery to Home Office for approval.—The Ministry of Health has sanctioned purchase of steam-roller by Whitland R.D.C. The County Education Committee has approved sub-committee's recommendation that cottages and land adjoining Llanelly Intermediate School be acquired for extension of school grounds and to find alternative accommodation for cottage residents in order to demolish them.

CHADDERTON.—Messrs. Alfred Redfern & Sons, builders, Brooklands-grove, Oldham, propose to erect two houses in Fields New-road, Chadderton. Mr. F. E. Thomas, builder, proposes to erect 14 houses off Cornbrook-road, Chadderton: and plans have been approved for a new pavilion for Springbank Bowling Club on their green off Albion-street, Chadderton.

CHEADLE.—Mr. L. Wharton, builder, is erecting detached houses and bungalows off School's-hill.

CHEETHAM.—Mr. P. Cummings, architect, 51, Kingstreet, Manchester, is preparing plans for alterations to the Roumanian Synagogue, Ramsgate-street.

CHERITON.—Plans passed by U.D.C.: Four houses, Royal Military-avenue, for Mr. C. H. Waters.

CROYDON.—Crystal Palace F.C. have bought a big freehold site between South Norwood and Thornton Heath, and some £30,000 is to be spent on stands, offices, &c., and the preparation of the ground. The lease of the club's present ground will expire shortly.——In view of the amendments to the Corporation Bill, under which it had been originally proposed to demolish Whitgift Hospital, in order to widen the roads in the centre of the town, it has now been decided to widen right up to the Hospital which will be left projecting into the road.

DEWSBURY.—Plans passed by T.C.: House, Overthorpe-road, for Mrs. Rowley; garage, Clarence-terrace, Saville Town, for Mr. G. E. Benson: detached house, for the Ravensthorpe and Northorpe Conservative Club: extensions to shops in Green-lane, for Mr. Teale: motor garage and stables, Crackenedge-lane, for Mr. Knowles; shop, Foundry-street, for Mr. Wood: additions to warehouse, Huddersfield-road, for Messrs. Handley & Drury; greenhouse, Vulcan-street, for Mr. G. Simpson: alterations to archway, St. Joseph's Church, Batley Car, for the Trustees.

DORCHESTER.—Rebuilding of Dorchester Brewery, for Eldridge, Pope & Co.

EASTLEIGH.—The Ministry of Transport has sanctioned the scheme for widening North End-road and the erection of the bridge.

EBBW VALE.—The U.D.C. has appointed a deputation to act with the Board of Guardians in soliciting sanction to £25,000 relief work scheme.

EDINBURGH.—The Dean of Guild Court at its last sitting considered 53 cases, the largest number since the war. Thirty-two were full petitions and 22 were granted. They included: A. Bremner, to erect three double-flatted cottages at Davidson's Mains; Henry Burnet, bungalow at Davidson's Mains: Peter Cameron, bungalow and garage at Milton-road, Portobello: Miss M. Clark, bungalow and garage at Drum Brae, Corstorphine: Craiglockhart Building Co., 12 self-contained houses at Lockharton-avenue: Mrs. J. B. Gibson, dwelling-house at Duddingston: R. Scott Millar, dwelling-house and garage at Barnton: George Graham & Sons, four semi-detached houses at St. Albans-road: Spylaw Building Association, two villas at Barnshot-road, Colinton: Edinburgh Corporation, to erect three blocks of three-storied tenements (three-roomed houses) at Hope-street, Corstorphine.——At the last sitting of the Dean of Guild Court 53 cases were considered. Of 33 petitions for full warrants, 18 were granted, including several for the erection of houses in the suburbs. Among these were the following: Mr. David Barrie, two semi-detached villas, Milton-road: Mr. George Roberts,

* See also our List of Contracts, Competitions, etc.

villa, Ravelston Dykes; Mr. Charles W. Mitchell, bungalow, Lanark-road; the Royal Infirmary, cottage, Convalescent House, Corstorphine.—The following warrants were also granted: Dr. W. A. Fowler, laboratories, 21, Walker-street, for X-ray research; Edinburgh Corporation, electric transformer-house, Portobello Power Station; Robert Maule & Son, extension of premises at the west end of Princes-street: Mr. John White, conversion of house, 31, Palmerston-place, into two separate houses; the Scottish Dyers & Printers, Ltd., dispatch house, Inglis-green-road; Sears & Co., alterations to shop front at 23, Earl Grey-street; St. Cuthbert's Co-operative Association, Ltd., alterations to shops, 34-36, Deanhaugh-street.

EPSOM.—A scheme, which is receiving considerable local support, provides for turning the old brewery adjoining the Parish Church into a Church Hall.

EXETER.—The T.C. is recommended by the Housing Committee to approve the City Architects' lay-out of the Buddle-lane housing estate, providing for the erection of 469 houses and 10 shops, with recreation and allotment grounds, and also for the erection of 201 houses, including 58 parlour houses. The Health Ministry has approved the Council's town-planning scheme, and the Council is recommended to appoint an assistant to the City Surveyor, with experience in town planning, at a salary of £350 to £400 per annum, the appointment to be limited to the period of the scheme.

GATLEY.—Alterations to the frontage, kitchen, smoke-room and vault of the "Red Lion" Hotel are proposed by Messrs. Threlfall's Brewery, Ltd., Cook-street, Salford. The plans are being prepared in their own office.

GOLBORNE.—Mr. W. T. Molyneux proposes to erect a detached house in Barns-lane. The plans have been approved.

GRAVESEND.—Plans passed by T.C.: House, Campbell-road, Mr. J. B. Miles, for Mr. P. J. Cork; conversion of "Hillside," Old-road East, into three dwellings, Mr. A. J. Heeley, for Messrs. G. E. Wallis; alterations to cinema, Windmill-street, for the Cinema Co.; alterations at Milton House, Parrock-street, Mr. A. Sidwell, for Dr. Hancock.

GREASEBOROUGH.—Mr. James Totty, architect, has been asked to prepare plans, &c., for the erection of eight bungalows on land in Croft-street, acquired from the overseers as trustees of the late Jane Horsfall's estate.

GUILDFORD.—The T.C. is being recommended to apply for sanction to borrow £41,100 for its housing scheme.

HALE.—Messrs. Walker & Toft, builders, Edale-street, Failsworth, propose to erect a bungalow in Hale-road.

HASTINGS.—Plans passed by T.C.: House, Albany-road, Mr. C. Hughes, owner, Messrs. Callow & Callow, architects; house, Priory-avenue, Misses Wilshin, owners, Mr. H. M. Jeffrey, architect; bathroom, &c., 32, White Rock, Mr. H. Salmon, owner, Mr. H. W. Coussens, architect; bathroom, 40, Quarry-road, Mr. J. Hollingsworth, owner, Mr. H. M. Jeffrey, architect; alterations to shop, 125, Mount Pleasant-road, Messrs. Draper & Co., owners, Mr. H. W. Coussens, architect; garage, "Banavie," St. Helen's Park-road, Mrs. Willett, owner; pair semi-detached houses, Collier-road, Mr. J. B. Ward, owner, Mr. J. Hunt, architect; bungalow, Hoads Wood-road, Mrs. Wade Brown, owner, Mr. J. Hunt, architect; alterations, "The Dun Horse," Albion-street, the Steyning Breweries, Ltd., owners, Mr. Stavers H. Tiltman, architect; bathroom, &c., 79, Battle-road, Mr. W. H. Balkham, owner, Mr. J. Hunt, architect; garage, "Radcliffe House," Sedlescombe-road, Mr. W. H. Young, owner, Mr. H. W. Coussens, architect; garage into lock-up shop, Caves-road, Mr. P. Terrill, owner, Mr. P. H. Oxley, architect; additions, "The Cleve," Old London-road, Mr. B. Malony, owner, Messrs. Callow & Callow, architects; grill room, &c., Queen's Hotel, Queen's Hotel Co., Ltd., owners, Mr. E. L. Haynes, architect; conversion into one house of 25 and 26, Caves-road, Mr. J. H. Poynton, owner, Messrs. Callow & Callow, architects; bungalow, Hillside-road, Mr. S. Dunk, owner; conversion into one house of Nos. 77 and 79, Edmund-road, Mr. G. Rubie, owner, Messrs. Callow & Callow, architects.——Local interest is being taken in the T.C.'s proposal to proceed with the conversion of the East Sussex Hospital buildings into a music pavilion, at an estimated cost of £60,000. Plans have already been prepared.——The Electricity and Public Lighting Committee is submitting a scheme for building a new power station.

HAY.—Plans passed by Hay R.D.C.: Alterations at Three Cocks Mill and for Royston Memorial Hall, Bronllys.

HINDHEAD.—The completion of the nave of St. Alban's Church by the erection of two additional bays is being considered.

HORBURY.—Plans approved by U.D.C.: Two houses, Wakefield-road, for Mr. W. Clarke; motor-garage, for Mr. Fitton; house, Regent-street, for Mr. R. Hemingway.

HORSHAM.—It is proposed to purchase the old Cottage Hospital as an annexe to Collyer's School, and the Governors have received the approval of West Sussex E.C.——The U.D.C. has been urged to accept the tender of Murrell Brothers, of Roffey, for building eight non-parlour houses at Oakhill at £427 each, exclusive of land.

Timber Merchant's Estate.

Mr. William Christie, of Minden, Peebles, formerly of West Point, Saltcoats, timber importer, a director of Messrs. William Christie & Co., Ltd., who died on April 6, aged 77, left personal estate provisionally valued at £318,952, of which the personal estate in Great Britain amounts to £309,418.

Use for Spent Oil Shale.

Mr. H. O. Weller, Director of Building Research of the Department of Scientific and Industrial Research, 16, Old Queen-street, Westminster, S.W. 1, writes :—

"It may interest your readers to learn that a first experiment with spent shale from the Scottish oil-fields at the Building Research Board's experimental station has produced a puzzolanic hydraulic cement of a tensile strength at three months' age greater than that required for Portland cement by the B.E.S.A. Standard Specification. My attention was directed to this waste material by Dr. A. P. Laurie, of Edinburgh. Samples were obtained from the Research Association of the Shale Oil industry. The cement is of a pleasant light red colour, and is much harder than ordinary Portland cement."

PROPOSED NEW BUILDINGS.

(*Continued from p.* 114.)

Rusholme.—Messrs. W. Radcliffe & Sons, Ltd., Brick-lane, Manchester, are erecting six shops with housing accommodation in Birchfields-avenue and Bird Hall-lane, Rusholme. Messrs. Foden & Hilton, builders, are also erecting seven shops with housing accommodation in Beresford-road, Slade-grove, and Clitheroe-road, Rusholme.

Salford.—Groves & Whitnall's, Ltd., brewers, Regent-road, propose alterations to the "Swan Inn," Bury New-road.

Sawbridgeworth.—A plan, submitted by the vicar for the erection of a house in Springhall-lane, for the curate, has been passed by the U.D.C.

Sleipton Mallet.—A scheme involving an outlay of £1,000 for the extension of the water supply of Emborough, including the construction of a new reservoir, has been approved by the R.D.C.

Southwold.—The T.C. has agreed to sell land for a sugar beet factory, the first to be put up in Suffolk.

Sowerby Bridge.—Plans approved by U.D.C.: Shed, Albert Mills, for Messrs. Homfray & Co., Ltd.; house off Park-road, for Mr. J. W. Shaw.

Sunderland.—The R.D.C. is to advertise for tenders for the erection of 70 additional houses; 10 each at Ford, Fulwell and Hylton; and 20 each at Ryhope and Tunstall. The houses will be of the small type of four rooms.——Subject to the passing of the Housing Bill, the T.C. proposes to make the following contributions: Robert Stafford, 16 five-roomed houses, Cuba-street. Grant, £150 per house. Messrs. J. W. White, 5 five-roomed houses, Colchester-terrace. Grant, £145 per house. Messrs. J. W. White, 22 five-roomed houses, Ewesley-road. Grant, £150 per house. Messrs. J. W. White, 28 five-roomed houses, Mount-road. Grant, £150 per house. W. Knaggs, 12 four-roomed houses, Grange-street. Grant, £100 per house. C. T. Elliott, 2 three-roomed houses, Milburn-street. Grant, £150 per house.

Swindon.—The T.C. has received proposals from local builders for the erection of houses, subject to a grant being made, as follows: Mr. A. J. Colborne, 20 houses, County-road; 34 houses, Newcastle-street; 60 houses, Stratton-road; 50 houses, Northampton-street; 60 houses, Wroughton-road; 162 houses, Ferndale-road; Mr. E. W. Beard, 32 houses, Wellingborough-street.——Plans passed: Mr. E. Blake, house, and house with shop, Kingshill-road; Mr. E. W. Beard, 32 houses, Wellingborough-street; Messrs. Bishop & Fisher, two houses County-road, nine houses Leicester-street, and 25 houses and shop Northampton-street; Mr. E. H. Bradley, four shops with living room accommodation, Devizes-road; Messrs. Bishop & Fisher, printing room, Eastcoff-hill; Mr. R. J. Beswick, bakery, Station-road, and additions, 61 & 62, Devizes-road; Mr. A. J. Colborne, house, Stratton-road; Mr. A. Crewe, shop, Station-road.

Taunton.—The T.C. approved a recommendation of the Main Drainage Committee that the work of reconstructing the sewage disposal works and altering the refuse destructor be carried out at a cost of £27,000. It was also agreed that application be made to the Ministry of Health for sanction to borrow this sum, also to the Unemployment Grants Committee for a grant towards the cost.——The T.C. have decided to reconstruct the Sewage Works at an estimated cost of £27,000; also to grant a subsidy of £75 per house for 24 houses to be erected by the Priory Land Development Co., Ltd.

Thornaby-on-Tees.—Plans passed by T.C.: Warehouse, East-street, and picture hall, Mandale-road, for Mr. G. T. Alderson.

Torquay.—Plans passed by T.C.: Mr. J. U. Harris, dwelling-house, Hampton Estate; Mr. G. H. Easterbrook, house, Lincombe-hill Estate; Mr. E. E. Bensley, house, adjoining Barton Nursery; Mr. R. E. Narracot, eight houses, Hill Park Estate, Upton; Mr. J. F. Ford, four houses, Warborough-lane, Babbacombe; Mr. R. Atkinson, for conversion of stable to dwelling-house, rear of Fore-street, Barton.

Tredegar.—The U.D.C. has convened a meeting, with local industrial firms' representatives, other local authorities, and the representatives of the L.M. & S.R. Co., to petition a new station for Tredegar. The Council has requested the Railway Co. to erect covered platforms at the local collieries to avert the waiting in rain for trains by colliers.

Treharris.—Workmen of Deep Navigation Colliery have scheme for erection of institute and hospital at Treharris. The Treharris Lodge of S.W.M.F. is responsible for scheme, and site, &c., is being arranged by Committee.

Wakefield.—The City Council has passed the following plans: Mr. J. P. Firth, two houses, Barnsley-road, for Mr. W. P. Webster; house in Poplar-avenue, for Mr. George Crook; house in Flanshaw-lane, for Mr. George Crook; house in Barnsley-road, for Mrs. L. Baker; Mr. Dobson, house, Horbury-road, Lupsett, for Messrs. A. & E. Norbury; two houses, Gorbury-road, for Mr. D. Naylor; conversion of premises into a house and lock-up shop, Little Westgate and Windmill-yard, for Mr. E. Lockey; house, office and store, at Barnsley-road, Portobello, for the Yorkshire (W.R.) Electric Tramways, Ltd.; warehouse, between Back-lane and Westgate, for Messrs. G. Blakey & Son; for N. A. Whitham, two houses in Woodthorpe-lane, for Mr. F. H. Young; for Bell & Kay, house in Horbury-road, for Mrs. Wigglesworth; for W. H. Watson, conversion of mission hall, Danby-lane, Newmillerdam, for Mr. H. C. Moggs, into a private residence.——The R.D.C. have approved the following plans: Two houses, Denby Dale-road, Dunkar, for Messrs. Wilson Bros.; bungalow at Pontefract-road, Crofton, for Mr. W. Higgins; amended plan of house in Carr-lane, Shillington, for Mr. F. Gill; billiard-room and alterations to the Working Men's Club, Netherton, and two houses, Pontefract-road, Sharlston, for Mr. J. W. Fisher.——The West Riding County E.C. have approved of the erection of two new Middle Schools, one at Rothwell and the other at Wombwell. The former will provide accommodation for 300 children and is estimated to cost £12,000, the latter to provide accommodation for 400 children, estimated cost £16,000.

West Hartlepool.—Plans passed by T.C.: J. H. Geary, villa, Caledonian-road; F. M. Gibbon, addition, Elwick-road; G. J. Bell, bungalow, Stockton-road; Miss Wilson, eight houses, Powell-street; E. M. Tweddle, 16 cottages, Allendale-street; F. M. Gibbon, four houses, Powell-street; J. & R. Hayes, pair semi-detached villas, Stockton-road; Hartlepools Car Co., alterations to premises, 3, 5, and 7, Church-square; Mrs. Waters, alterations to premises, York House, York-road.——The B.C. have accepted tenders amounting to £1,587 for extension to the Maternity Hospital and erection of an Isolation Block.

Weymouth.—Plans passed by T.C.: Bungalow, Carlton-road North, for Mr. Wallis; lavatory accommodation, Roman Catholic Church, Dorchester-road, for Mr. G. A. Andrews; two bungalows, Buxton-road, Mr. A. J. Bennett, for Mr. K. Openshaw; alterations, St. Mary's-street, for International Tea Stores Co.; bungalow, Fernhill-avenue, for Messrs. Jenkins, Hitt & Grant; four houses, Dorchester-road, for Messrs. Jenkins, Hitt & Grant.

Whitby.—Plans passed by the U.D.C.: New gymnasium and dormitory at Smeaton Castle Priory, and two semi-detached houses at Ruswarp.

Whitefield.—Plans approved by the D.C.: For conversion of Park-lane Schools into eight cottages, for Mr. T. P. Willan, contractor, 1, Humphrey-street Hill, and for a bungalow to be erected in Phillips Park-road, for Mr. J. W. Eastwood.

Whitley and Monkseaton.—At the monthly meeting of the U.D.C. it was stated that the past month had established a record for plans. Seventy-nine plans had been approved for privately-owned houses and lay-out plans for no fewer than 408 houses.

Wigan.—Mr. J. Walkden, builder, Monument Lodge, Wigan, proposes to erect a large number of houses, some of a bungalow type, on Brock Mill-lane Estate.

Wirral.—A special meeting of the Board of Guardians has been held to consider the question of providing increased accommodation at Clatterbridge Institution. It was recommended by the Infirmary Committee, among other things, that a separate female infirmary be erected, a maternity ward for 20 cases be provided, and a new building for 24 children be erected, in addition to 12 more bedrooms for nurses. After discussion, the scheme was adopted. It was agreed to advertise for competitive terms from architects in Lancashire and Cheshire.

Withington.—Mr. W. Cambell, architect, Torkington Lodge, Gatley, is preparing plans for a large detached residence in Parsonage-road.

FIRES.

Birmingham.—A destructive fire has occurred on the premises of Messrs. Cole & Co., button manufacturers, Pritchett-street, Aston.

Bognor.—Considerable damage has been done by fire at the depot of the Southdown Motor Services, Ltd.

Liverpool.—A fire has occurred at the premises of the White Star Shipping Co.

Penistone.—Two serious fires have occurred, viz., at the Palace Cinema Theatre, and at the Oxspring Corn Mills, belonging to Mr. C. H. Webb.

* These prices apply to *new buildings only*. They cover superintendence by foreman and carry a profit of 10% on the prime cost without establishment charges. A percentage of 1½ should be added for Employers' Liability and National Health and Unemployment Acts and from 1s. 6d. per £100 for Fire Insurance The whole of the information given on this page is copyright.

TRADE NEWS.

Messrs. W. N. Froy & Sons, Ltd., builders and builders' materials' suppliers, of Brunswick Works, Hammersmith, W. 6, have issued two new catalogues. One catalogue, of 230 pages, is devoted to all classes of grates, ranges, stoves, boilers and mantels; and the other, of over 100 pages, lists the firm's builders' ironmongery, door furniture, &c. Both catalogues are fully illustrated, and should be in the hands of all contemplating the purchase of building materials.

We recently referred to Petters, Ltd.'s, 12–14 B.H.P. oil engine for paraffin or crude fuel oil, which starts instantly from cold without pre-heating electrical apparatus. This exhibit has received the Royal Agricultural Society of England's silver medal (highest award) at the show at Newcastle. The engine has also been awarded a diploma of honour in the prime movers' class at the Brazilian Centenary Exhibition.

At a lunch in connection with a general meeting of the Metropolitan District of the Institute of Municipal and County Engineers at the Connaught Rooms, samples of concrete where Novoid cement had been incorporated with ordinary Portland cement, as well as plain concrete specimens, were shown. Novoid cement has been used in the reconstruction of Oxford-street, after successful tests by St. Marylebone Borough Council.

At the annual general meeting of J. W. Singer & Sons, Ltd., the Chairman, Sir William Bull, Bart., M.P., said he was pleased to report that even with the competitive prices now ruling, this Company had been able to maintain the pre-war standard of work which has been associated with the name of Singers for 70 years. The metal work used to-day was generally of much plainer design than formerly, owing to the smaller sums available for building purposes, but he was very pleased that the Company's prices for their quality of work were very low, and that, on the average, the percentage for the difference between the Singer quality and inferior metal work was small. They had been able to maintain their efficient staff of highly-trained and skilled workmen, and the confidence of their overseas customers was well maintained, as was exemplified by the amount of work they had despatched recently to Shanghai, Hongkong, King Williamstown, Stutterheim, Bombay, Calcutta, &c.

Messrs. Dodge Bros. (Britain), Ltd., of Stevenage Wharf, Stevenage-road, S.W.6, have issued a booklet which contains much matter of interest to present or prospective users of motor transport for loads of 15 cwt. or one-and-a-half tons. The booklet is illustrated with a large number of photographs of fleets of "Dodge" commercial vehicles in use by distributors in the London area.

The Plate Glass Publicity Bureau (9, Southampton-street, W.C. 1) have issued a brochure describing the manufacture of plate glass from the crude processes of the Egyptians in 3300 B.C. to the present time. The brochure is well illustrated throughout, and the photographs of the large and heavy machinery used in the making of such a material will probably come as a surprise to most people. The brochure also contains some excellent photographs of modern buildings in which polished plate glass is used.

The Directors of Westminster Bank, Ltd., have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares, and the maximum dividend of 6¼ per cent. on the £1 shares for the same period. The dividends (both less Income Tax), will be payable on August 1.

Messrs. Cochrane & Co., Ltd., Ormesby Ironworks, Middlesbrough, have secured an order from the Aberdeen Corporation for the supply and delivery of three miles of 48-in. diameter cast-iron pipes lined centrifugally throughout with 1-in. thickness of concrete.

LAW REPORT.

INSTALLATION OF HEATING APPARATUS.

In this action, the hearing of which occupied Mr. G. A. Scott, High Court Official Referee, during July 9, 10 and 11, Messrs. Z. D. Berry & Son, of Artillery Mansions, Victoria-street, Westminster, sought to recover from Messrs. King & Arnell, Ltd., of West End-lane, Hampstead, who described themselves as building owners, the sum of £130, balance of account relating to the installation of a heating apparatus at one of the defendants' buildings in Kingsway.

Mr. Raynor Goddard, K.C., with Mr. Rickets, appeared for the plaintiffs; and the defendants were represented by Mr. Eness.

From counsel's opening, it appeared that the plaintiffs' account for putting in the heating apparatus was £2,600, all of which had been paid with the exception of £130, liability for which was disputed on the ground of alleged breaches of contract, and in an amended defence the defendants said that Mr. Barker, the supervising engineer, had acted without authority in permitting to be used welded water or gas tubes instead of solid drawn steel steam tubes, which were more expensive. Plaintiffs, however, said that the solid tubes were unprocurable at the time and defendants consented to the use of the welded tubes, which were proved sufficiently effective and reliable for the purpose. Defendants also claimed to be entitled to an allowance for an omission to fix certain radiators mentioned in the specification, but which were not required.

The plaintiffs' case was that the whole of the work had been carried out to the satisfaction of the superintending engineer, who had the consent of defendants to use the welded tubes, and the trouble now seemed to be that defendants thought they ought to have a reduction of price to represent the difference in the cost between the two kinds of tubing.

A considerable quantity of technical evidence was taken on both sides as to the difference between the two classes of tubes, particularly in relation to stability and durability, and differences of opinion were expressed as to the difficulty of obtaining the solid drawn tubes at the time (1919–1920).

The Referee said that if the welded tube was proved, as it had been in this case, to be more than sufficient to resist the pressure, there was no reason why it should not have been used, except that it was not in accordance with the specification. The unions used in the work were admitted to be not first-class, but they were the best obtainable at the time, and they had been in use for two years without mishap. Why, he asked, should they be objected to now?

Mr. Eness said they would be liable to accident owing to expansion and contraction caused by the steam.

The Referee said that a contractor could not be held responsible for defects developed after years of use, especially if the work had been carried out to the satisfaction of the engineer who authorised it. In this case, the engineer had said that the unions would stand thirty-six times the pressure likely to be put upon them.

Mr. Herbert King, a director of the defendant company, said that his company had built upon several plots in Kingsway, and as the building in question was expected to be used by the Office of Works the company desired that the best of materials should be used, and it was suggested that the Mannesman solid-drawn tubes should be used for the heating apparatus.

The Referee said there was nothing in the specification about Mannesman tubes, and evidence in regard to them did not affect the contract.

Witness, continuing his evidence, said that in 1919, Mr. Barker, the engineer, urged him to use Mannesman's tubes, but as it was found that they were unobtainable at the time, he said if he (witness) would allow him to use the other tubes, he would arrange the matter in the account at the end of the job. That was said in the presence of Mr. Berry, who said, if he were not allowed to use the other tubes, he would "chuck up the job," as it was impossible to get the tubes mentioned in the specification.

The Official Referee, in giving judgment, said that the main defence set up was in regard to the tubes, and it was clear that Mr. King made special requirements about this particular installation. It was well known that plaintiffs could not go into a free market and get what they wanted. Under the circumstances, they had to get the best they could, and owing to variations made in the specifications reductions were made in plaintiffs' estimate. No reduction was made on account of the tubes. It was decided that twenty-four of the radiators should not be fitted, and the question was how much should come off the plaintiffs' account. The matter had been properly dealt with in the omissions. He was unable to find that there had been any breach of contract, and there must be judgment for the plaintiffs for the amount of the claim, £130, reduced by £11 1s.

Judgment was accordingly entered for plaintiffs for £118 19s., with costs.

NEW COMPANIES.

The particulars quoted below have been compiled by Messrs. Jordan & Sons, Ltd., Company Registration Agents, of 116 & 117 Chancery-lane, W.C. 2, from the documents available at the Companies' Registry.

Wilkinson & Leech, Ltd. (190,270). Registered May 28. 28a, Manor-row, Bradford. Colour, varnish, pigments, gum, shellacs and enamel manufacturers, &c. Nominal capital £1,000.

A. E. Davis (Holborn), Ltd. (190,301). Registered May 30. Builders' merchants, dealers in hardware, &c. Nominal capital, £2,000.

I. E. Bailey (Smethwick), Ltd. (190,334). Registered May 31. 394, High-street, Smethwick. Builders and contractors. Nominal capital, £500.

River Clubs & Houses, Ltd. (190,373). Registered June 1. To acquire for investment or re-sale lands, houses, buildings, &c. To carry on the business of builders and general contractors, architects, and surveyors, &c. Nominal capital, £10,000.

Leeds Building Guild, Ltd. (190,289). Registered May 29. Marshalls Mills, Water-lane, Leeds. To encourage and promote the establishment of Guild factories, workshops, and building establishments. Builders and contractors, &c. Nominal capital, £200.

A. Burslem & Son, Ltd. (190,385). Registered June 2. Stone and monumental masons, marble merchants, sculptors, &c. Nominal capital, £10,000.

J. C. Wilson (Malvern), Ltd. (190,082). Registered May 18. Belmont Brick Works, Belmont, Malvern, Worcester. Brick manufacturers and haulage contractors. Nominal capital, £7,000.

E. & F. Richardson, Ltd. (190,108). Registered May 22. Duroline Works, Batsworth-road, Mitcham, Surrey. Varnish, enamel and paint manufacturers, &c. Nominal capital, £5,000.

Hall, Beddall & Co., Ltd. (190,183). Registered May 24. Pitfield Wharf, Waterloo Bridge, S.E. 1. Builders, contractors, engineers, &c. Nominal capital, £50,000.

G. & J. Waterman, Ltd. (190,101). Registered May 24. 103, High-street, Watford, Herts. Builders and contractors. Nominal capital, £6,000.

Eternit Pietra Artificiale (London), Ltd. (190,165). Registered May 24. Norfolk House, Laurence Pountney-hill, E.C. 4. Merchants, merchants and dealers in bricks, concrete, artificial stone, tiles, and any other materials used in the construction or erection of public works. Nominal capital, £500.

J. Elliman & Son, Ltd. (190,410). Registered June 4. 102, Bromley-road, Beckenham, Kent. Builders, decorators, &c. Nominal capital, £3,500.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXV.—No. 4199. JULY 27, 1923

"LONDON OF THE FUTURE."

IN place of the usual vague generalities as to the necessity of abolishing slums and of making London a city really fit to live in, Mr. Collcutt* here propounds a perfectly definite solution to the slum problem, and offers, in addition, various suggestions for the improvement and embellishment of the town. The proposals included may not all appeal to us, and some may, for practical purposes, prove impossible of execution; yet we feel that here we have a man of vision, who can see beyond the sordid considerations that influence the average business transaction, and we get a sense of idealism in examining his suggestions.

The book is divided into two parts, the first dealing with slum clearance, and the second with the social life of the people and the change of outlook necessary if we are to set things right. So much has been written about slums, and about those conditions of life that are associated with the monotony of what may be described as semi-slums that we need not here concern ourselves with the author's indictment, beyond agreeing that it is pitiful how easily a family may get accustomed to living in evil conditions; because, while such resignation may save us from unrest and disturbance, at the same time it unquestionably makes the task of the State or the Local Authority who start on a slum clearance scheme more difficult. This attitude of apathy is possibly reflected in the lack of enterprise shown by the Labour Party in the House of Commons on a subject that should not in any sense be a party question. Perhaps the fact that it is not a party matter has allowed the problem of slum clearance to go by default, so far as a sustained and constructive campaign against the evil is concerned. As a solution to the slum difficulty, Mr. Collcutt leads us to the Thames Embankment, and points to that part of Lambeth facing the river that extends from the London County Hall to Waterloo Bridge and southward as far as York-road. Here, he suggests, is the only part of London where the regeneration of the slums can begin in a practical manner. "At present," he says, "the Thames in Central London on one side takes rank with the most beautiful of city rivers, while on the other side it looks as ugly as a mean river in some dirty manufacturing town, and at low water discloses a shelving bank of dingy and unwholesome mud."

The author's plea is for the construction of a South Embankment with, facing the river, blocks of residential flats containing varying accommodation suitable to house different classes of the community. It is pointed out that the structures might here rise to the height of ten stories, each of these blocks containing sixty homes, served, of course, by lifts. While fully admitting that such huge blocks would be justified facing north across the river, yet we do not feel that the river front is the right place for residential buildings. Suitable though it may be for hotels where extra convenience of access is essential, yet even with a south embankment the river front is strictly limited in extent and is surely more suitable for public or quasi-public buildings. There would be plenty of room for blocks of flats (of the kind provided with lifts at Tabard-street by the London County Council) inland behind the river front, and an additional advantage would be obtained by building them away from the front because there would then be no necessity for them to face north. This is, however, a minor point, and few with the interests of London at heart can wish to see the formation of a South Embankment delayed. The author's inspiring vision and optimism in mapping out the future shows perhaps the defects of its qualities in the suggestion that Trade Unions and employers should arrange a kind of truce for a period and agree that "no matters of divergence should arise that would lead to a strike or a lock-out." The suggestion is eminently right and reasonable, but differences of opinion are liable to arise, and human nature is not always governed by what is right and reasonable, in which case agreements that are not enforceable are apt to be ignored. If such an agreement can be enforced it means, of course, that some form of arbitration is legally provided for, and we find ourselves back much where we are now.

The formation of a new Charing Cross Bridge is intimately bound up with any scheme for a South Embankment, and Mr. Collcutt frames so able an appeal for a bridge with buildings on either side that it is hard to resist the conclusion that in no other way could we effectively link up the two banks. Whereas an open bridge would entail "a dreary waste of road . . . nearly half a mile in length . . . with no shelter from blustering wind and rain, excepting that afforded by an inadequate umbrella, on the other hand, a street bridge would afford the shelter of covered colonnades, with places of business throughout its length, meaning a mile of valuable property." The author adds that "this great advantage can be obtained if 'the powers that be' use that corporate common sense with which God, sometimes, endows them." We sincerely hope that the authorities concerned will seriously consider this proposal, giving due weight to public convenience, architectural beauty, and sound finance, all of which aspects are dealt with in this book. It would seem certain that such a closed bridge would add enormously to the value of property in South London, and this should not be overlooked in considering the desirability of erecting it.

In the second part of the book attention is drawn to the necessity of improving our ideals and we are reminded of Mazzini's dictum: "He who could spiritualise democracy would save the world." It is implied that if religion and business have failed to combine, it is because such a union has never been attempted. May it not be because our views on both require drastic amendment to bring them into harmony with an idealised everyday life? One has an uneasy feeling that what may be described as "hard business methods" are not compatible with Christianity; a feeling that is evidently shared by Mr. Collcutt, as is the confidence that business and religion are not of necessity antagonistic. In deprecating the hard business mentality, we do not overlook the failure of the Church in the past as a disinterested interpreter of religion, nor do we forget that applied science has done more for child welfare than ever the Church attempted in the days of its power.

We hope this little book will be widely read and its lesson taken to heart. It points to the movement for a "brighter London" that will not only mean longer hours for drink, and more frivolity, but a real improvement in the condition and lives of its inhabitants.

* By Thomas Edward Collcutt, P.P.R.I.B.A. London: Leonard Parsons, 1923. Price 2s. 6d. net.

NOTES.

The Dinner to Professor Pite.

The dinner in honour of Professor Beresford Pite, M.A., Hon.A.R.C.A., who, for twenty-three years has held the Professorship of Architecture at the Royal College of Art, South Kensington, was an event of more than usual interest and was the occasion for the expression not only of the high regard and esteem of those present for their guest, but of some striking remarks on the importance of art and architectural education. Those who had the pleasure of listening to Professor Pite's speech in reply to the toasts previously proposed could not fail to be impressed by its sincerity and earnestness, and while his influence as a teacher was well known, the speech was another illustration of the importance of the work he has been engaged in during the last quarter of a century. The questions he addressed to his audience on the position of modern architecture, and the movements and efforts of the last century, are not without significance, and we shall do well to take cognisance of them. Because we have no doubt Professor Pite's influence as a teacher is far-reaching, we venture to express the hope that the active part he will now take in the practice of his art will not be a barrier to the further exercise of his gifts as a teacher. We endorse the suggestion made, in the appreciation we give elsewhere, that as a Professor of Architecture at the Royal Academy, on some future occasion, he would be an admirable successor to the many brilliant men who have held that position. His friends greet him with good wishes, in which we heartily join, for we have not forgotten his early year on the staff of this journal.

Inspiration in Drawing.

Allusion is made on another page to Professor Pite's ability as a draughtsman. When he won the Soane Medallion in 1881, with his Gothic club design, the perspective (which we publish to-day) came with quite a startling force through its audacity and character. It was looked upon as the cleverest essay in a Dureresque manner which the modern architectural world had known. Notwithstanding its unsuitability for a modern west-end club, it still holds something of an inspiration, and we can now see that the moving spirit which prompted it has survived with a sustaining force through Professor Pite's career. Of this design the author says: "This was made in the autumn of 1881 in the interval of leaving my father's office on the termination of five years' articles, and before obtaining a stool as improver with the late Mr. John Belcher. It was a boyish venture; I was then 20 and probably was as astonished as anyone with what ensued. The motive was an enthusiasm for the Albert Durer wood blocks which Wm. Burges had recommended to students and for the mediæval world, which he had suggested by his design for the Gloucester fountain. This had been stimulated by the possession of a copy of the sketch-book of Vilars d'Honnecourt, an Institute prize in the preceding year. Alas, for my visions of honour—both G. E. Street and Burges were gone before the design was published! What the rest of the world thought did not matter."

Bush House, Strand, W.C. Messrs. Helme & Corlett, Architects.

Professor Pite's Successor.

In the appointment of Mr. Hubert Worthington, of Manchester, to succeed Professor Pite, we believe an excellent choice has been made, and though the Professor-elect is a comparatively young man, his personality and knowledge eminently fit him for such a position. Mr. Worthington is at some disadvantage in following a professor of the exceptional ability of Professor Pite, but that in itself is a distinction, and the newly-elected professor is to be heartily congratulated upon his appointment.

Mr. Paul Waterhouse.

At the Royal Institute of British Architects on Monday, Mr. Paul Waterhouse, Past-President of the R.I.B.A., was handed an Address in recognition of his services during his two years of Presidency. The Address was signed by members of the two Councils over which Mr. Waterhouse presided, and of the Board of Architectural Education of which he acted as Chairman, and by the Presidents of the Allied Societies of the Royal Institute who were in office during the same period. In presenting the Address Mr. J. Alfred Gotch, the new President of the R.I.B.A., Mr. Arthur Keen, Hon. Secretary of the R.I.B.A., and Mr. T. R. Milburn, Past-President of the Northern Architectural Association, spoke in warm terms of Mr. Waterhouse's services as President. We give a report of the proceedings, which were of a very happy and spontaneous character, on p. 125.

Lincoln Cathedral.

One of the most charming appeals ever made for public subscription is the little pamphlet issued on behalf of the Lincoln Cathedral Restoration. Anyone who receives that appeal should gladly give something, however small, for this most laudable object, for the picture of the Cathedral by the late F. W. Rich is well worthy of a frame. It is an admirable reproduction of one of the best drawings that gifted artist has made. Everyone who has been touched with delight in our beautiful English Gothic art owes a tribute towards the preservation of Lincoln Cathedral; the very name of the Angel Choir conjures up a vision of pleasure.

Competitions.

The discussion of this subject is of periodic appearance as, indeed, we should expect it to be, and more often moves within a range which leaves out the most important considerations, be

Bush House: Side View.

cause, as a matter of fact, no wholly satisfactory system of securing the right man for the job, either through public competitions or other machinery, can be obtained. It is sometimes forgotten that there are not remedies for everything, and that failing a general level of appreciation in a nation, to know the good from the substitute, and to be guided by the right things, we can only flounder on as at present with such adjustments as the jury system over the individual assessor secure for us. How fallible is the system of public competition is illustrated in the case of the Wellington statue, when eighty-three models were sent in, a committee of selection to deal with them having been appointed. As a result Mr. Calder Marshall took the first prize, and Mr. Woodington the second!—and had not, owing to a change in the Government, Lord John Manners, at the Office of Works, heroically stepped in, and ignored the finding of this committee of taste, entrusting the work, amid much outcry, to Alfred Stevens, over the heads of the committee, we should not possess Alfred Stevens' masterpiece at all! We are not anxious to press the argument to the condemnation of competitions, but to illustrate their extreme unreliability, the inadequacy of machinery in the absence of the one fundamental qualification—an educated and enlightened nation. There are signs, however, of the growth of this in the doubts felt for a security resting only on official reputation and machinery.

The Regent's Park War Buildings. It is strange that nearly five years after the Armistice the public should still be deprived of large areas of Regent's Park by monstrous buildings erected to meet the emergencies of war. As members of the public we are accustomed to departmental methods, but it is hard to believe that this prolonged delay in the removal of these eyesores is necessary. St. James's Park and the Embankment Gardens were cleared, as a result, we believe, of public agitation, and we hope that similar pressure will be brought to bear on the Government to give us back Regent's Park; otherwise we are afraid that these buildings may become permanent and unwelcome additions to London's architecture.

Colour in London. The silvering of the lamp-posts has been followed by further evidence that we are to be given relief from London's usual drab monotony. Not only is London Bridge Station receiving a coat of cheerful colour, but rival omnibuses are appearing in every tint from the usual red to violet and coffee. In the days of the horse-drawn vehicle its destination was known by the colour of the 'bus—the white Putney and the Chelsea chocolate for example. The uniform colour now adopted by the London General Omnibus Company, with the dull word "General" given the place of honour on the vehicle's side, can by no means be ranked among the beneficial changes introduced by that enterprising organisation. The rival 'bus companies may, or may not, be desirable additions to London's traffic, but they have at least given us an added gaiety of colour.

The Professional Classes Aid Council. We have pleasure in drawing attention to the second annual report of this body, as the assistance required by the professional classes in these days of heavy taxation and diminished incomes is great. Judging from the report the Council disperse their funds with care and discrimination, and in many cases the recipients have sent the body grateful letters of thanks for their timely assistance. Contributions should be sent to the Hon. Treasurer, Mr. E. W. Monkhouse, 251, Brompton-road, S.W.3.

The Bank of England Façade. There will be much agreement in architectural circles with the protest against the mutilation of Sir John Soane's Bank of England façade, which has just been published by the Soane Trustees. It may not be an exceptionally fine work, but what are we going to put in its place? That there are living architects who could do better work to-day we can hardly doubt, but had we not better leave well alone?

Bush House, Aldwych, W.C. Messrs. Helme & Corlett, Architects.

GENERAL NEWS.

Professional Announcement.

Messrs. Holt & Glover, architects, of Liverpool, have opened an office at 6, Auckland-terrace, Parliament-street, Ramsey, I.O.M., and will be pleased to receive catalogues, &c.

Appointment.

The Llantarnam (Mon) U.D.C. has appointed Mr. Arthur L. Vinney, Abergavenny, to the District Surveyorship from twenty-five applicants for the post.

Presentation.

Mr. A. Hewitt, J.P., architect, of Llandudno, has been presented with a solid silver tea and coffee service in a case, subscribed for by the residents of the town, and a lady's dressing-case. The presentations were made in appreciation of his services to the town.

British Engineering Standards Association.

At the fifth annual general meeting of the British Engineering Standards Association, held recently at the Institution of Mechanical Engineers, the Chairman, Sir Archibald Denny, Bart., in reviewing the year's work, laid stress on the fact that the Association was faced with a deficit of some £1,700, and said he hoped the Government, who represented the purchasing public as well as industry as a whole, would assist in putting the finances of the Association on a more stable basis. The national character of the work of this organisation, devoted to simplification and the promotion of national economy in our engineering and allied industries, was well known. It was not a profit-making concern, and had nothing to gain but much to give to industry generally and the country as a whole.

Liverpool Reconstruction Schemes.

A Liverpool Corporation scheme for the demolition of old property, at an estimated cost of £135,000, was the subject of a public inquiry at Liverpool, conducted by Mr. E. Leonard, of the Ministry of Health, on Thursday and Friday last. Mr. Dudley Aukland (Deputy Town Clerk), stated that the Corporation had already spent £400,000 in clearing away insanitary property and £850,000 in re-housing. There remained in the city just over 2,000 houses to be dealt with. Of these, 502 houses, accommodating 2,376 persons, were involved in the present four areas, which extended to 5½ acres. It was proposed to re-house between 1,800 and 2,000 of the dispossessed people on the same sites. Mr. F. E. G. Badger, A.M.Inst.C.E. (Director of Housing), said there would be no demolition till other accommodation had been found for the residents. The number of new dwellings, which would have either two or three bedrooms each, would be 307.

A scheme of street-widening and re-building, involving an estimated outlay of £130,043, is before the Liverpool City Council. The improvements have been recommended by the Estates Committee of the Council. This scheme affects a central shopping area on the north-west side of Parker-street and Clayton-square. The scheme contemplates demolitions, the building of large modern stores, large café premises, and a widening of two streets—Parker-street and Houghton-street.

COMPETITION NEWS.

Hull.

For the Corporation.—Designs for the erection of a cenotaph in Paragon-square. Sending-in date July 31. Conditions from the Town Clerk on receipt of a cheque for one guinea. The estimated cost of the work is £4,000, and premiums of £150, £75, and £50 are offered for the designs placed first, second and third respectively. The assessor is Mr. Stanley Hamp, F.R.I.B.A., whose decision will be final.

Halifax.

For the Corporation.—Plans and reports for lay-out of Bull Green site and part of centre of the town adjoining. Premium, £50. Sending-in day, October 1.

New Wesleyan Church and Sunday School Warrington.

The conditions of this competition are not in accordance with the regulations of the R.I.B.A., and Members and Licentiates are advised to take no part in it.

Wirrall Union.

For the Guardians.—Design for extensions at the Poor Law Institution, Clatterbridge. Premium, £50.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Singapore College (Jan. 1, 1924; March 30). Greenwich Baths (Aug. 25; May 4). Hull Art Gallery (Nov. 5; May 4). Mint competition for plaques (Sept. 30; May 25). Birmingham Masonic Temple (Sept. 12; June 22). Hull Cenotaph (July 31). Colour scheme (Sept. 30; June 29). Glasgow Pavilion (June 22). Warrington Church (Aug. 8).

Poultry Cross, Salisbury. (*See p.* 136.)

BRISTOL SCHOOL OF ARCHITECTURE.

FIRST PRIZE DISTRIBUTION.

On Saturday the first annual prize distribution and exhibition of work of the students of the Bristol School of Architecture, which was founded about four years ago, was held at the Royal West of England Academy, Bristol. The chair was taken by Mr. G. C. Lawrence, A.R.I.B.A., R.W.A. (Vice-President of the Bristol Society of Architects), in the unavoidable absence of the President (Mr. W. S. Skinner, F.R.I.B.A.).

The Chairman gave a brief history of the school, which was founded by the Bristol Society of Architects, its maintenance and covenance being undertaken by the Society. All the students are either articled to or are assistants with architects in practice, so they have the combined advantages of theory and practice. Mr. Lawrence said they were glad that, after some anxiety, they had gained the assistance of Mr. G. W. Gordon Hake, A.R.I.B.A., as Master of the School. Under his guidance the school had made great progress, as the examples of work exhibited on the walls proved. They had a meritorious school, which would be recognised to a much greater degree in due time. He hoped that the citizens of Bristol would take a pride in the existence and progress of a school that would be doing an important work in training young men who would be doing their part in making more perfect the architecture of the city.

Mr. Gordon Hake expressed his thanks to the students and the council for the co-operation that had been extended to him during the year. He was proud of the work of the students, and he was glad to be able to announce that Mr. E. H. Button, who would cease to be their senior student, would commence duty next term as assistant master of the school.

The Lord Mayor, who presented the prizes, said that he owed much to the School of Art, a precursor of that School of Architecture. In his early days he was a student at that school for four years, and he owed much of his success to what he learnt in those years. He was sure that the students now attending the school would receive excellent education and also an impetus in their work. Architecture was a wonderful subject, and he thought it ought to be a part of the education in the elementary schools. Some time ago the King made a speech, in which he said that the municipality that was meanly housed was apt to be meanly esteemed. He hoped that at no distant day the city of Bristol would have buildings for its municipal offices and life that would be a credit to it, and which would give a lead to the erection of even more magnificent examples of architectural art in the city. He congratulated the students of that school upon the work they had done and wished the utmost success to them all.

The prizes having been presented, the usual votes of thanks concluded the proceedings.

The Awards.

The following were the awards:—

The Dame Janet Stancomb Wills Travelling Studentship: E. H. Button.

Royal West of England Academy Silver Medal and Bristol Society of Architects' Prize: W. J. Thrasher.

Royal West of England Academy Bronze Medal and Bristol Society of Architects' Prize for the best student in the preliminary course: J. H. Bourne.

Architectural Association Design Prize: R. H. Brentnall.

The Savory Design Medal: A. J. Saise.

Master's Prize for the most marked progress during the year: T. W. Snailum.

International Congress on Architectural Education.

The Board of Architectural Education R.I.B.A. announce that the International Congress on Architectural Education will be held in London from July 28 to August 1, 1924.

PRESENTATION OF AN ADDRESS TO MR. PAUL WATERHOUSE.

Mr. Paul Waterhouse, who has been President of the Royal Institute of British Architects for the past two years, was the recipient on Monday afternoon of an illuminated address from his colleagues.

Among those present were Sir Aston Webb, R.A., Sir Reginald Blomfield, R.A., Professor Beresford Pite, M.A., Sir Banister Fletcher, Professor W. R. Lethaby, Major H. Barnes, and Messrs. J. W. Simpson, P.-P.R.I.B.A., Gilbert Scott, R.A., Edward P. Warren, T. R. Milburn (Newcastle), W. G. Newton, Michael Waterhouse, H. T. Buckland, Percy Thomas, Lewis Solomon, G. C. Lawrence (Bristol), W. A. Pite, Searles Wood, Delissa Joseph, Alan Munby, Stockdale Harrison, Francis Jones, H. B. Ashley, Walter Cave, H. Austen Hall, Stanley Hall, H. B. Lanchester, H. Charlton Bradshaw, Max Clarke, W. Gilbee Scott, Herbert A. Welch, Herbert Shepherd, Frank Woodward, A. G. R. Mackenzie, John Slater, H. M. Fletcher, and Maurice E. Webb. There were also many ladies present.

Mr. J. A. Gotch, the President, in opening the proceedings, said, as they all knew, they had met for the most pleasant purpose of giving an expression of their appreciation to Mr. Paul Waterhouse for the excellent manner in which he had fulfilled the duties of President.

Mr. Arthur Keen, Hon. Secretary of the Institute, said that those immediately concerned in that meeting were those who were members of the Council of the Institute over which Mr. Waterhouse had presided and the Presidents of the Allied Societies. They would, perhaps, regard him (Mr. Keen) as the chief conspirator in that matter, but he did not mind that, as he confessed he was the chief conspirator two years ago when a presentation was made to the then outgoing President, Mr. Simpson. At that time it was seriously declared that what they were doing should not be regarded as a precedent, but he did not say that he shared that view, for he felt they should leave it to the future to do what was right and proper under the particular circumstances of the occasion. They felt they could not let Mr. Waterhouse go with merely a word of thanks. They wanted to express in the written word what they wanted to say to him, and so, with the help of Professor Pite and Miss West, they had produced a document which would be handed to him by the President. They also wanted to go further, and one of them had suggested that as Sir Wm. Orpen was painting the portrait of Mr. Waterhouse, to go with those of other Past Presidents in the Institute Room, it was thought it would give considerable satisfaction to Mr. Waterhouse and his family if a replica of that portrait could be presented to him. Sir William said he was quite prepared to produce, in due time, a copy of the portrait—that was, a copy finished by Sir William's own hand. So they hoped to present Mr. Waterhouse with a copy of the portrait later on. It was not the qualities most apparent in a man which were always the most important. They knew Mr. Waterhouse mainly on account of his delightful speeches and the manner in which he had conducted the affairs of the Institute. But, above all, it seemed to him that the most important characteristic of Mr. Waterhouse was his tremendous belief in the Institute and what it was capable of, and he (Mr. Keen) did not think he could please him more than by assuring him that he had contributed tremendously to the influence of the Institute and increased its prestige in a very large measure. If he might be allowed to speak on behalf of everyone present, he thanked Mr. Waterhouse very cordially indeed for all he had done for them.

Mr. T. R. Milburn, President of the Newcastle Allied Society, said Mr. Waterhouse had made his name honoured in the Provinces by the esteem they had for him, and he felt sure that what he (the speaker) said would be endorsed by all the other societies. He could sincerely say, without any disrespect to the dead or living, that no President had ever done more for the Provinces in the way of bringing them in touch with the Institute. The way in that direction was paved by Mr. Simpson, their previous President, and Mr. Waterhouse, during his two years of office, had cemented that feeling. As to Mr. Waterhouse's work for the Institute, he had attended conferences in all parts of the country; they had only to make the request and Mr. Waterhouse would at once take the train and journey down to their annual dinner or meeting. As a member of the Council for two years he paid his tribute to the fair chairmanship of Mr. Waterhouse, and as a member of the Institute he thanked him for the splendid speeches he had made. Their best wishes also went out to Mrs. Waterhouse. They esteemed Mr. Paul Waterhouse as their Past-President, as an architect, and as an English gentleman.

The President said the duty devolved upon him of presenting to Mr. Waterhouse their first instalment of their token of appreciation of his conduct in the chair, and he did so with the very greatest pleasure. They all felt that during the last two years Mr. Waterhouse had filled the chair with the greatest tact, courtesy, fairness and judgment. It was not only they, as architects, who had been struck by the eloquence of Mr. Waterhouse's orations, but he had heard those orations spoken of with the greatest wonder and delight by gentlemen who were entirely outside the Institute. Mr. Waterhouse was scientist enough to know that icebergs were only seen on the surface of the water, and that the bulk was underneath, and this analogy might be applied to their feelings towards Mr. Waterhouse.

The President then handed to Mr. Waterhouse an illuminated address, bearing the names of many of his colleagues, as follows :—

"The Royal Institute of British Architects.

"Dear Paul Waterhouse,—Your colleagues, who are all your friends, wish by this document to record the sincere pleasure that you have given them during the past two years of your Presidency. The chair of the Institute has acquired a new distinction by your addresses; the amenities of professional contact have been increased by the wisdom and grace of your conduct of business; our conviction of the high aim of the universal but complex art of architecture has been strengthened by the eloquence and dignity of your appeals to the students; and we have been charmed by the lambent humour with which your scholarship has been illuminated.

"For these particular advantages, which you have as our President conferred upon all the concerns of the Institute, and for the maintenance of the high professional tradition of your father, whose memory is so strong and valued, we hereby offer to you this testimony of gratitude and affectionate esteem."

Then follow the names of about 70 signatories, including members of the two councils over which Mr. Waterhouse had presided, and of the Board of Architectural Education, of which he had acted as chairman, and by the Presidents of the Allied Societies in office during the same period.

Mr. Waterhouse, in reply, said he had been touched by the kind words said about him, but what had touched him so much was to see so many of his old friends present that afternoon. But he might say this—he was a man of sufficient personal vanity to be entirely pleased with all that they had said about him. Those proceedings, as he had said, were all very pleasant to him. He wanted to make two acknowledgements—the first was, the help he had always received when in the chair; the good feelings always shown him and which set him on his voyage as their President with confidence. He had tried not to abuse that confidence. He had always felt, on the occasion of any difficulty, that there was a body of friendly feeling which would help him to carry through and assist him more than he deserved. Then there was another acknowledgment he had to make—the help he had always received from the staff of the Institute. It was no mere figure of speech to say that almost everything had depended upon their staff. To begin with, Mr. McAlister had always willingly given every kind of help it was possible to give; and with regard to the other members of the staff he could not say better than observe that they were following the type of Mr. McAlister and were a valuable help. Then there were others—and they were always ready and willing to held night and day. Proceeding, Mr. Waterhouse said he felt that it had been impossible for him to have gone through two years of the Presidency without, in his speeches at some time or another, unconsciously hurting someone's feelings. Words were often dangerous two-edged weapons, and he would like them to remember that what he might have said hurt the speaker as much as the hearer. In saying "Good-bye," he meant no more than "Farewell, adieu!"

The proceedings then terminated.

Since the meeting on Monday the following letter was sent by Mr. Waterhouse to Mr. Arthur Keen :—

My Dear Keen,—It was impossible on Monday last to say even half the things that ought to have been said by a man in the position in which I found myself. I had no idea, when I accepted your invitation to be present with my wife at Conduit-street, what the acceptance was to imply. Of a meeting with a few friends I was assured, but that the gathering would be so large, so representative and so distinguished, was quite beyond my thoughts. Your own delicate speech and the graceful words of the President touched me very deeply, so did the cheery address in which Mr. Milburn gave expression to what he assumed to be the voice of the "Greater Institute." Even now in writing this I am embarrassed by realising that the mere enumeration of these unexpected and undeserved honours emphasises the disproportion between your praises and my performance. The suggestion of a duplicate of the portrait, overwhelming in its generosity, means a great deal more than even the kindest of the givers can well imagine, because it, and the parchment with its warmly fraternal greeting, will form a very enduring memorial of the handgrip between our family and the Institute.

At moments when I can set aside the thought of the undue value put upon my doings I see with increasing clearness the amazing kindness of my friends.

Mrs. Waterhouse and I were made very happy and quite unreasonably proud.

Yours very sincerely,

Paul Waterhouse.

Athenæum, July 26, 1923.

The New County Hall.

At Tuesday's meeting of the London County Council the General Purposes and Establishment Committee reported on the provision of better accommodation for the Press.—Miss Susan Lawrence moved that the report be referred back as nothing was proposed for removing the difficulty. The reporters could not hear with sufficient fullness. There was plenty of room on the floor of the chamber for the Press.—Sir F. R. Anderton said it was hoped there would be some means by which the acoustic qualities of the chamber could be improved.—Sir John Gilbert said the committee were prepared to receive any practical suggestions, and he promised again to consider the matter.—On this undertaking Miss Lawrence withdrew her motion, and the report was passed.

CORRESPONDENCE.

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Competition System.

Sir,—It is primarily necessary in the consideration of any new scheme to recognise the facts that have in the past regulated and affected the progress of competitions. Briefly, twenty-five years ago many competitions were conducted on very unfair lines by both the assessor and the promoter, and the competitor who had influence invariably got the job. Evolution has, however, entirely stamped out this deplorable state of affairs. Competitions of late years have been run on very honest lines, particularly those under the jurisdiction of the Royal Institute of British Architects and the Society of Architects, but in addition to honesty of purpose there is a great deal more to be desired, especially with regard to the conditions of the competition and the procedure as to the assessment.

Mr. Howard Robertson's views published in your issue of July 13, are deserving of consideration, and I hope will conduce to a big discussion on this matter with a view to improving the existing objectionable methods. I would like first of all to point out that without competitions the profession would lose a great deal of prestige, as competitions are an important medium through which the public are interested in architectural matters and architects in particular. In my opinion, all public bodies should put their proposed buildings out to open competition. It is not only the fairest way, but it gives a better chance to younger men in the profession to find an opening. For instance, a proof of this was the result of the competition for the New County Hall. Apparently the greatest objection the authorities have to holding a competition is the large amount of expenditure it involves, more particularly with regard to the fees paid to the assessors. It is, therefore, imperative if we are to get the authorities to put their work out to competition that it must not cost them a serious amount over and above the cost of placing the work with a practising architect in the usual way.

In my opinion there is no doubt whatever that a jury of assessors is in every way more efficient than a single assessor, who unconsciously may be against designs which do not conform to his taste, and who may meet with many points in a competition with which he may not even be familiar. Again, the competitors themselves, knowing who the assessor is, have a strong tendency to follow and copy his work and play up to his taste. I am convinced that there should be a jury composed of three assessors, each nominated by the Royal Institute of British Architects or the Society of Architects, and each assessor being an eminent architect and a specialist in at least one branch of architecture. Such an arrangement would eliminate the possibility of a biased opinion on the part of any one of the assessors influencing the award, and the discussions which would undoubtedly take place between the assessors would prove of infinite value in making the award.

The time has now arrived when the methods of competitions should be still further improved, more especially with regard to the appointment of assessors and the question of their remuneration. Architects should not consider their appointment as assessor to a competition part of their lucrative business, but should look upon it as an honourable appointment of a very high standing. There should be no payment other than out-of-pocket expenses to any assessor, and I am sure the leaders in architecture would willingly give their services to such an honourable cause. It would prove to the general public that architects are actuated by a keen public spirit and *esprit de corps* and are not out merely for their own gain.

The non-payment of assessors would have a very important influence on the willingness of authorities to advocate competitions, as the expense they now consider prohibitive would be entirely eliminated. I would suggest that each assessor should be presented with a small gold medal suitably inscribed by the authorities as a mark of some appreciation for the services they have rendered. Trusting you will be good enough to find space for these views in your paper, and that it may be the means of further discussion on this important matter.

Thos. Wallis.

Sir,—I am very interested to see the correspondence in your columns started by Mr. Robertson in his able article on the important question of employing juries instead of single assessors in public competitions. As one who, in the course of his ordinary work, acts on a jury to assess designs several times a week, I can very heartily commend the jury system. Indeed, I think it is the only fair system and the only one which can reduce to a minimum the element of luck which is inseparable from competition work.

For judging student designs, where the personal idiosyncrasies of the various teachers and their relations to the students have to be discounted, there is no other method. It has been adopted by every architectural school of any importance. It leads naturally, in balancing one opinion against another, to a system of marking by points, the only way by which the various complicated issues of even an ordinary architectural problem can be properly weighed.

Now, if this system is necessary to do justice to student work, how much more is it necessary to the highly responsible work of a public competition? I have assessed these latter both as a member of a jury and as, nominally, a single assessor, and I unhesitatingly say the former is the method to be preferred. I say "nominally" with regard to the latter, because in the cases where I have acted as a single assessor I have always consulted colleagues whose opinion I value on the last half-dozen or so designs, which I have brought away with me so that I might live with them for a while and let their points and character sink in. I take this consultation with colleagues not to be evidence of weakness, but a proper realisation of the personal bias which any designer must have when viewing designs by others.

C. H. Reilly.

Liverpool.

Coincidence in Design.

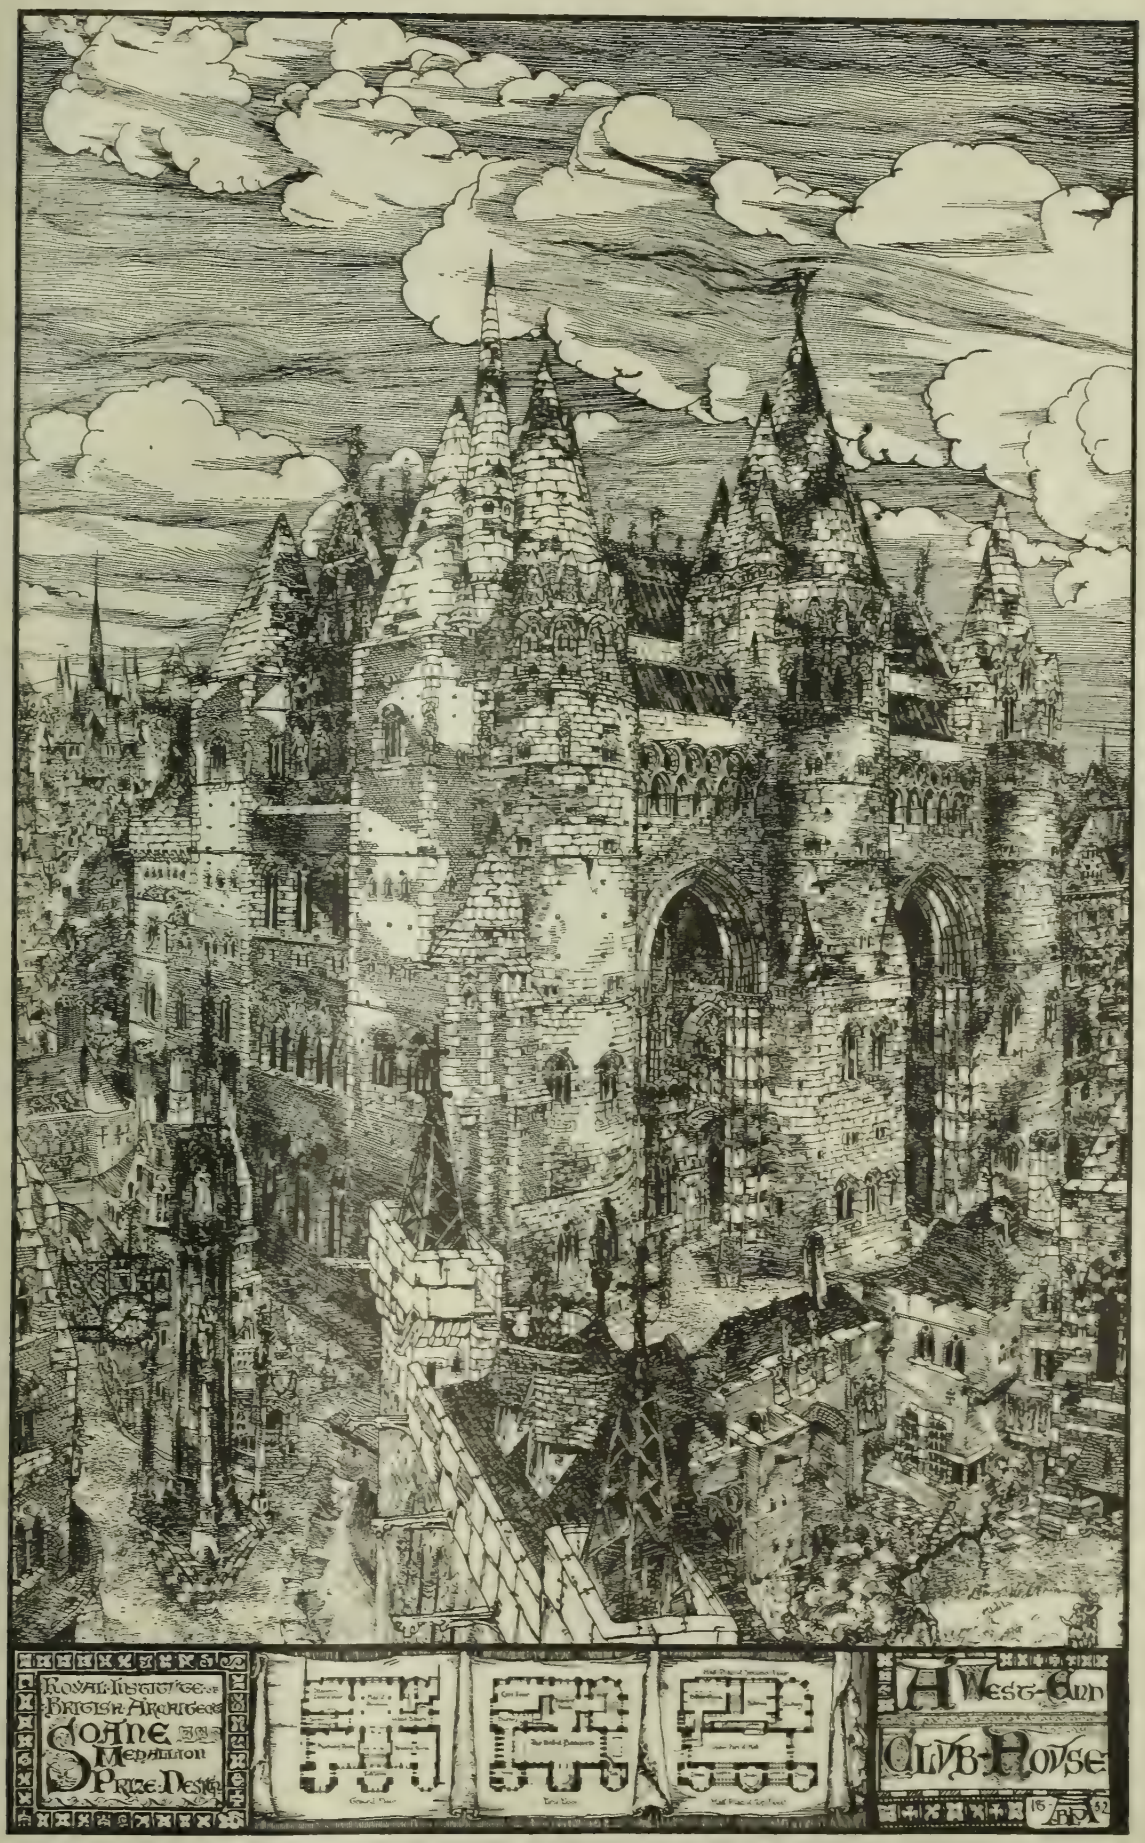
Sir,—At the dinner given last week to mark appreciation of Professor Pite's attainments upon his retirement from the Royal College of Art, Professor Rothenstein aptly referred to the opportunity that time would now present to Professor Pite for the further exercise of his "creative work"—I wonder whether any one at the function carried in mind a "creation" of Professor Pite's recorded by the enclosed abstract from your journal.

Bush House, now erected at the Strand terminus of Kingsway, is singularly coincident in design with Professor Pite's "Central Offices" of 21 years ago. With Bush House to guide us may we entertain the hope that the South side of the Thames in the coming period of its development will gain an accession to its architectural set out by the building of such a work as is conceived in Professor Pite's design.

[*** We republish the abstract and the illustration on p. 132.]

Canada's New Offices.

The High Commissioner for Canada announces that permanent premises have been secured for the Dominion of Canada, in London. The Crown lease of the premises in Trafalgar-square (west side), belonging to the Union Club, has been purchased. Canada will not enter into occupation until March. A suggested scheme of treatment of the exterior of the building is being prepared by Mr. Septimus Warwick, F.R.I.B.A., who has been retained by the Dominion Government.



Muiredach's Cross, Monasterboice.

(*See p.* 136).

THE ARCHITECTURAL ASSOCIATION.

The annual excursion of the Architectural Association will be to Avignon and district commencing on September 6 and returning to London on September 17. Headquarters will be at Avignon, and excursions will be arranged to Nîmes, Arles, Orange, &c., which will be optional. Arrangements will be made for second class travel (first class boat) and hotel accommodation (rooms, breakfast and dinner), tips, &c., at a cost not exceeding £12 for the whole excursion. Those joining the party will make their own arrangements for meals on the journey out and home, and also for lunches. The overhead charge will not provide for fares, &c., to places outside Avignon, and members will be free to attend excursions, arrangements for which will be made from day to day, or make their own arrangements. Those proposing to attend the excursion are requested to send their names to the Secretary immediately, as the number of the party will be limited. Tickets will be available for thirty-three days, and although members must travel out to Avignon in one party they may return independently, breaking the journey in Paris if they so wish.

The annual School of Architecture prize distribution and exhibition of students' work will take place on July 27, at 3 p.m., to which all members are invited. There will be an exhibition of students' work, which will remain open daily (10 a.m. to 6 p.m.), until August 17.

A West-End Club House. Design by PROFESSOR BERESFORD PITE, F.R.I.B.A.

[The perspective of this design, made in the autumn of 1881, was awarded the Soane Medal of 1882. The motto "Yo he trovado El Dorado," was perhaps significant of the enthusiasm of the early days.]

THE ROYAL COLLEGE OF ART.

DINNER TO PROFESSOR PITE.

The departure of Professor Pite from his tenure of the Chair of Architecture at the Royal College of Art, South Kensington, which he has held for the past twenty-three years, has called forth a remarkable manifestation of affection and esteem not only from the students themselves, and the professorial staff of the college, but also from his colleagues and friends. During the past week he has been acclaimed by his private pupils, the students of the college, and finally on Friday last he was entertained at Pagani's at dinner, when a large and representative company assembled to do him honour. We do not remember that it has fallen to the lot of any past-president of the R.I.B.A., as it has to Mr. Paul Waterhouse, to address three prominent members of the profession within a month—the three being Sir John Burnet, Mr. John Slater, and now Professor Pite; but Mr. Waterhouse, as might be expected, acquitted himself as happily as ever.

An Appreciation.

The following appreciation of Professor Pite by one who knows him well will be read with interest:—To receive the commendation and to gain the goodwill of professional colleagues is surely the most desirable and precious reward that any professional man can desire, for there is none more distinctive. In saying this it has to be acknowledged that the gifts with which Professor Pite has been so richly endowed are remarkable in range and cumulative in character. The epithet, "architect, artist and gentleman," can in the best way be suitably applied to him, and yet fails to comprise his essential qualities. First and foremost of his many gifts he is a draughtsman with a compelling character of his own in whatever medium he employs. His methods have a wide range, from the breadth of the Durer woodcut manner of thick line, manifested in the now famous "club house" design perspective and other drawings of that early period, and which will be known by the motto adopted for the Soane Medallion design in 1882 of "El Dorado." From this method to fine line and medium line in his direct sketches of old work, and further of modern design, each have the definite qualities of a master of his craft. The same can be said for his rendering of architectural composition and apart from his executed works, the output of which has doubtless been limited by his devotion to his professorial duties. These possess the same qualities of distinction which, in originality and value, has seldom been equalled.

Professor Pite's quality of architectural expression, like that of his medium of draughtmanship, has exceptional characteristics of original beauty, which at times pass almost to the range of eclecticism, and though commanding in force, may sometimes fail in achievement, being often beyond the ken of the public mind of to-day. It is to be hoped that now he is freed from labours that must in a measure be regarded as altruistic, we may in the years to come see much more executed work from his hands than has hitherto been possible.

Professor Pite is also a speaker of compelling interest, being a trenchant debater, and one who would not be unwilling to take an opposite view to that supposed to rule. Apart from general addresses, his lectures to students have not been confined to South Kensington, but have been delivered to students throughout the country. His gifts and qualities have been recognised by the University of Cambridge, where a School of Architecture has been founded, largely due to his initiation. These qualities as a lecturer are such as should not be lost to the public, and it is to be hoped that it may be possible for the Royal Academy to recognise this. That body has a magnificent record behind them in the courses of lectures, which have been of far-reaching value, by Sir Gilbert Scott, Mr. G. E. Street, Mr. E. M. Barry, and Sir Reginald Blomfield, and no one would be more suited to carry on this work. Professor Pite is a very able writer upon all architectural topics, and has considerable legal knowledge, especially in regard to the law of ancient lights. These gifts so lightly carried have, however, been sedulously cultivated by wide reading, "so vast is art, so narrow human wit," that, although genius has been described as the capacity for taking pains, there is something definitely beyond this, for is it not a spiritual gift so graciously bestowed on mankind to be used for the good of fellow man, being the spirit of wisdom and skill in all cunning work, a divinity that shapes our ends rough hew them how we will.

The Royal College of Art has been but one side of Professor Pite's activities. For many years several evenings in each week have been devoted to the direction of the architectural section of the School of Building carried on by the London County Council in Ferndale-road. Here a very remarkable work has been carried on among youths who have passed out of elementary schools into this great technical secondary school for industrial instruction, and which must have a marked influence upon the welfare of art in the country. Mr. Waterhouse, at the dinner, briefly referred to another aspect of Professor Pite's activities as a leader of the laity of the Church of England, being a member of the National Assembly, where he is a keen debater.

In his reply to the toast of his health, the guest outlined a programme for advance in architecture, asking where we were and whither we were going, and his remarks, which were of unusual interest, were characteristic of the speaker and helped to explain the affection and esteem in which he is held by those who have passed through his courses.

The Dinner.

A dinner was held at Pagani's Restaurant, Great Portland-street, on Friday evening last week, when Professor Pite, M.A., F.R.I.B.A., Hon. A.R.C.A., was the guest of honour of the Royal College of Arts, on his retirement from the Professorship of Architecture which he has held at the Royal College of Art for twenty-three years. Mr. W. R. Davies, C.B., of the Board of Education, presided, and among those present were Sir Reginald Blomfield, R.A.; Sir Frank Short, R.A.; Lieutenant-Colonel E. F. Strange; Professor W. Rothenstein, Professor W. E. Reilly, F.R.I.B.A.; Mr. Paul Waterhouse, P.P.R.I.B.A.; Mr. Eric Maclagan; Professor W. R. Lethaby, Mr. W. A. Pite; Professor Anning Bell, R.A.; Professor Derwent Wood, R.A.; Mr. Halsey Ricardo, Professor S. D. Adshead; Mr. Topham Forrest, Superintending Architect L.C.C.; Mr. Maurice Webb, Mr. J. J. Jones; Mr. Hubert Worthington, Professor elect of Architecture at the Royal College of Art; Mr. Ian MacAlister, Secretary of the Royal Institute of British Architects.

Mr. Paul Waterhouse proposed the toast of "The Profession and Professor Pite." He said that his ambition for a long time had been to be allowed to propose the toast of a man like Professor Pite. There was no other man just like Professor Pite, and it was by a strange coincidence, he thought, that they that evening had allowed him to have that honour on that occasion. He had had the honour of being acquainted with Professor Pite and his works for many long years, and when he lived in Marylebone in his early days it used to be his pleasure to look up to him and his architectural works in that neighbourhood. All around there they found specimens of the art of Professor Pite, and in all cases he (Mr. Waterhouse) had enjoyed them. Since Professor Pite had left King's College School many honours had been bestowed on him. They all knew that his great work in education, outside his actual professional work, had been crowned by the honorary degree of M.A. of Cambridge University. "Worthy" was the word he should like to apply to such a man as Professor Pite, and he could not help realising that his life had been throughout one of unselfishness and devotion to his art. He had shown a reverence for his art by giving many years of his life to teaching others, without any attempt at personal aggrandisement—all to his honour and glory. Architecture was the best of the arts, and he (Mr. Waterhouse) considered there was no nobler task than spreading the knowledge of that great art, and with occasional creations on his own behalf that was what Professor Pite had done. None of those architects present could fail to realise what he had done in the way of collaboration with artists and architects. They heartily wished him every success in his

Professor Beresford Pite, M.A., F.R.I.B.A., Hon A.R.C.A.

removal to a freer sphere of architectural practice than he had been able to enjoy during the present century.

Sir Reginald Blomfield, in dealing with architecture, said that, with all apologies to his colleagues, the painters and sculptors, it seemed to him that the future of art lay with architecture, because in the first place architecture was a necessity of civilisation, and in the second place because architecture was strictly conditioned by practical needs, and by the laws of statics and dynamics, and this had protected the art from the aberrations which in recent years had distracted their colleagues in the sister arts. He even ventured to say that the architects of this country were the best in the world. Our supremacy in domestic architecture had long been admitted, but he believed that supremacy extended to civil and ecclesiastical architecture as well; and by architecture he did not mean either the plastering on of ornament or the reproduction of other people's designs, but skilful planning and the wise and orderly disposition of material. That had been found to be a real necessity for civilisation, and would be found to be more so in future. The more intelligent business men were beginning to realise that it was wise economy in building to have an architect in control, and not to leave things just to the fancy of the builder. But the wise, skilful and ordered disposition of material required every ounce of brain a man had got, and it was all-important that behind it all there should be a sound foundation of æsthetic, in regard to theories, standards and ideals controlling the practice of the art; and important as buildings were as showing the art in practice, scarcely less important were the written and spoken word and in this regard he wished to pay his tribute to the work of Professor Pite. Sir Reginald referred to the days, forty years ago, when Professor Pite's drawing, "El Dorado," took the profession by storm at the R.I.B.A., and said that since those days architects had always watched with interest the ideas and proposals of Professor Pite and his distinguished colleague, his (Sir Reginald's) old friend, Professor Lethaby. They were men who had been a stimulating influence in architecture in his generation. It must always be a comforting reflection for Professor Pite to know that he had left his mark on his generation and that he was one of those who had served the Mistress Art faithfully and well.

Professor Rothenstein gave the toast, "Professor Pite of the Royal College of Art," and spoke of the regret the students and his friends at the college parted with Professor Pite, who had been a wise and devoted colleague. They knew that Professor Pite would now have more time for his creative work. There was little so stimulating, so wise, and so clear as Professor Pite's lectures, and he had the admiration of the most distinguished members of his profession.

The toast was drunk with musical honours.

Professor Beresford Pite, in reply, thanked them heartily for their touching manifestation of kindness. He said that, like his friend, Mr. Paul Waterhouse, he shared ancestral interest in architecture, and among early recollections of his childhood were the smell of tracing paper and games with the drawing boards and "T" squares, when the office staff had gone. Before he was articled, his father sent him with his brother, whose ability and affection had been a life-long stimulus, to the South Kensington School of Art to learn drawing, and it must have been then or very soon afterwards that the happy discovery was made of inward pleasure in the revelation of art, a "good gift" that does not fade away and remains constant as a part of the inheritance to come. They all, as architects and artists, shared this gift; it gave them fellowship, even with Wren and Michaelangelo; it was more than the bond of mere professional sympathy; and its force was strongly expressed by that gathering. He valued greatly his long association with the Royal College of Art, an institution the existence of which expressed the fact that the State could not neglect art as a vital element in the intellectual life of the nation. It was a necessity that the Government should be connected with so delicate and abstract a thing as art; it would be deplorable if this contact was not recognised, and, therefore, organization became essential. The Royal College was the head of the system of schools of art and it was centred at the truly wonderful art collection at South Kensington. If this official recognition of art was not afforded, how insistent would be the demand for something else! How loud would be the cries for a Ministry of Fine Art! Surely fated to become dictatorial. Were not London, England and the whole Empire enriched by the possession and by the study of the State collections at South Kensington? Could they conceive of London to-day without these treasures of artistic workmanship or of the condition of our industries without this valuable stimulus? The art schools were the educational link between the Government and the industries—a link which the country owed to the prescience of the Prince Consort, who, somewhere about 1849, conceived the idea of a Frankfort Fair in England. He would wish to emphasize that it was impossible to omit architecture from a national art education that dealt with everything that possessed form, and thus capable of expressing not only purpose but refinement, culture and knowledge. How, important, too, was the scope of building, which was third amongst the largest industries of the kingdom. The value of architecture and its fundamental relation to the arts was seen very clearly in the valuable architectural index gallery at the South Kensington Museum; it provided a key to the historical import of the collections more usefully than either religious or social history. The combination and union of the arts was not only illustrated by the Museum, but embodied in the constitution of four schools in the College, viz., Architecture, Sculpture, Painting, and Design, utilising the training in drawing provided by the schools of art. Referring to the position of the architectural profession, Professor Pite asked for what ideal does architecture stand to-day? A century ago it stood for a pure Greek, of which the Athenæums, invaded by Corinthian domes, were an illustration; later for a Romantic Gothic, which supplied the Oxford Movement in the Church with a mediævalism that is still valued; to be followed by a Free Renaissance, which might be dubbed licentious if it was not protected by the names of Elizabeth and Queen Anne. Can we not ask ourselves if the Classicism of the eighteenth century is really sufficient for the twentieth? Ought we to stand on the parapet of Somerset House and forbid the Victorian era as a blot to be forgotten? Do the three or five orders exhaust the legitimate possibilities of design? Is it not indisputable that architecture should be in its full measure the reflection of current thought, and that its impetus depends upon architects as thinkers—that is, as designers? Without progressive design the work of the architect of to-day, who elects to jump off, say, from the grave of Sir Wm. Chambers, and then to leap backwards, will be a stagnant museum subject. But where, he might be asked, are the new ideas? Must we wait for a second Wren? New ideas certainly had come in construction and requirements, and in the new interest of town planning. These were live movements to-day, and the conviction that all work honestly done would acquire æsthetic value was a healthy stimulant. It remained to "stir" up the gift that is within them. He was most thankful for many years of delightful comradeship at the Royal College, and happy to think that they had been in some measure successful.

"The Chairman of the Board of Education" was proposed by Mr. E. R. D. Maclagan.

The Chairman briefly replied.

Professor Lethaby, in the course of a few remarks, said he would like to thank Professor Pite for what he had been to him personally. He had really been one of his greatest friends since he came to London about 45 years ago.

We may add that Professor Pite is taking offices at 101, Great Russell-street, W.6.

Presentation of Diplomas to Students.

Sir Montague Barlow Minister of Labour, distributed the diplomas to students of the Royal College of Art in the Lecture Theatre of the Victoria and Albert Museum, South Kensington,

Professor Rothenstein (Principal of the College) mentioned that Sir Montague Barlow was once a student at the college. One of their students, Mr. J. W. Hunter, had been appointed the first Inspector of Art for the Northern Government of Ireland. An important event in the history of the relations between Government departments and the college was that two research studentships in art had been founded by the Minister of Agriculture in co-operation with the Development Commission. The Goldsmiths' Company had offered, through the Board of Education, £100 a year for three years for the development of the Silversmiths' Department of the college. Two great printing firms had also guaranteed £200 a year for two years to support the new school of engraving, and the Federation of British Potteries had collected £138 for the development of the pottery school of the college.

Sir Montague Barlow, after distributing the awards, delivered an address, and said he retained the very liveliest sense of the great comradeship and good work that prevailed in the college during the short time when other and comparatively trivial occupations allowed him to be present. It was true that the great advances in the art of the world were made by the leaders. The great painters, sculptors, and architects showed the way, but it was equally true that the great works themselves were achieved by the common people—the craftsmen, the ordinary members of the community. All those who left the school were going to be engaged probably for the rest of their lives in the practice of art.

Following are some of the awards:—

Full Diploma.—A. K. Lawrence.

School of Architecture.—A. Hafez, H. Z. Kassem, F. Mikhail.

School of Design.—Dorothy E. Alderton, Muriel E. T. Aspray, Marguerite E. Bayley, Violet W. Borrow, Alice M. Cottam, Kathleen L. Dickinson, Margaret F. Heaven, Doreen M. Hewison, Dorothy N. Hollingsworth, Hilda C. Lewis, Erna Manners, Elsie M. Rist, Katherine Ritchie, Mary M. Robertson, K. B. Smith, Edith Solomon, B. J. Statters, Frances M. Stringer, L. G. Studd, R. Till, Phyllis E. Walters

School of Sculpture.—Jocelyn B. Hepworth, H. S. Moore.

Travelling Scholarships.—Architecture.—K. Cheesman. Design.—R. Till. Drawing and Painting.—Kathleen M. Robertson. Sculpture.—T. Bayley.

Prize of £10.—Architecture.—F. W. Bosley. Design.—Hilda C. Lewis. Drawing and Painting.—H. M. Carr, J. E. Nicholls. Sculpture.—H. S. Moore.

Prize of £5 for Drawing from the Life.—N. Dawson.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

Following are notes from the minutes of the Council Meeting held on July 9:—

Drawing.—It was decided cordially to support the National Society of Art Masters in their view that drawing should be included for credit in matriculation and school examinations.

Architectural Scholarship.—A vote of thanks to Mr. John Keppie, of Glasgow, for his gift of a scholarship to be held in alternate years by the most distinguished student of the Glasgow School of Art and the Glasgow School of Architecture was passed by acclamation.

British Waterworks Association.—Mr. H. D. Searles-Wood and Mr. Percival M. Fraser were appointed to represent the R.I.B.A. upon the Standing Committee on Water Regulations of the British Waterworks Association.

Retired Fellowship.—Mr. I. R. E. Birkett, elected Associate in 1886 and Fellow in 1923, was transferred to the list of Retired Fellows.

Town-Planning Conference.—Mr. Raymond Unwin, F.R.I.B.A., has been appointed to represent the Royal Institute of British Architects at the Town-Planning Conference, to be held at Gothenburg from August 3 to August 10.

ILLUSTRATIONS.

Messrs. Liberty's New Buildings.

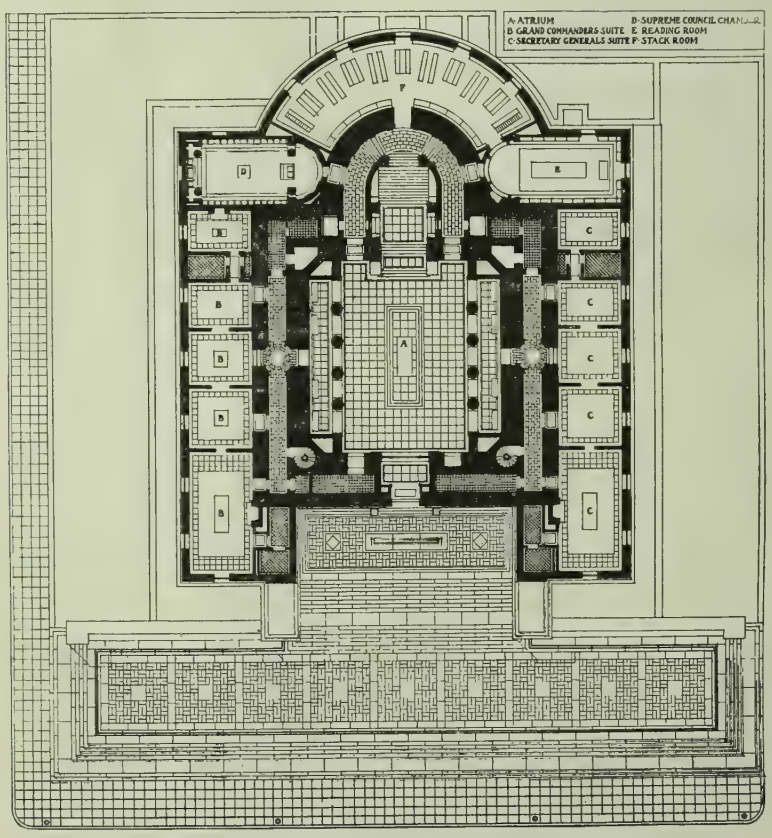
Messrs. Liberty's new buildings, in Regent-street, which are illustrated in this number, were designed by the late Mr. Edwin T. Hall and Mr. E. Stanley Hall, in 1914, just prior to the outbreak of war. The design has a base two stories high, above which is an Ionic order of three stories and an attic storey with end pavilions. Above the base the centre portion is recessed and crowned with a sculptured frieze of life-size figures representing Britannia receiving merchandise from the ends of the earth. The building has a frontage to Regent-street of 206 ft.; to Argyll-place of 51 ft.; to Foubert's-place of 73 ft.; and the back abuts on Kingly-street, which separates this block from Messrs. Liberty's Argyll-place premises. It is to be built of Portland stone. The shop fronts are of Swedish granite and bronze, and the lamps on the balustrade above the base will be of bronze. The total height is about 86 ft. There are basement, ground, and five other floors.

Rugby Memorial Chapel.

This chapel was illustrated in *The Builder* for January 20, 1922, when plans and working drawings were given and the building was fully described. The contractors were Messrs. Wooldridge & Simpson, of Oxford. The foreman of works and master mason was Mr. W. Simpson, Jun.; the master carpenter was Mr. Green, and the chief carver Mr. Moss. The stained glass in all the windows is by Mr. H. Grylls. The north-east and south windows contain the story of the Passion and Resurrection of Christ and attendant figures of prophets and evangelists. The traceries contain types of the subjects of the windows, and below are small predella subjects appropriate to those in whose memory the chapel is built, *e.g.*, kneeling figures of a soldier and a nurse, a celebration of the Eucharist at the front, a soldier's burial, the Vision of St. Martin. The west window is a more or less allegorical subject; the principal figure is that of the glorified Christ. He is attended by St. George and St. Nicholas, patrons of soldiers and sailors. In the tracery are figures of the virtues. Below is a scene in which ships are depicted entering a harbour, with a sunset background and a city set upon a hill. The subject of this window was suggested by the donor of all the glass. In the ante-chapel are lancet windows with figures of the founder of the school, and of old English warrior kings. In the cloister connecting the new building with the school chapel the windows have roundels illustrating war episodes by land, sea and air.

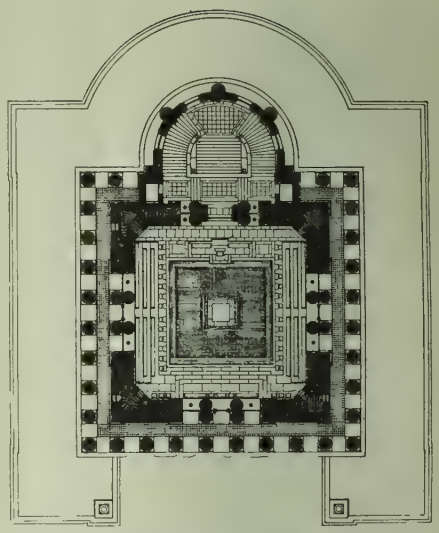
The elaborate inlaid wood lectern shown on the drawings was made by Messrs. Daymond, of Westminster, and is intended to hold the books of records of those who fell in the war. It is surmounted with a bronze statuette of a young officer, modelled by Mr. E. Burton, of Red Lion-street, London.

The reredos was carved by Mr. Moss at Oxford, but the five figures in the niches are Mr. Burton's work. They represent in the central niche a pieta group; in the side niches are St. Peter and St. Nicholas on the dexter side, St. Martin and St. Alban on the sinister. The vestry door has two carved label stops copied from the "listening angel" at Southwell; these were carved by Mr. McDougald. The altar is of Polyphant stone worked by Messrs. Nicholls, of Launceston; the cross and candlesticks are of copper gilt and were made by Mrs. Sandheim, of Notting Hill-gate.



The heating is by Messrs. Haden's and the electric lighting by the Rugby Corporation Electrical Works. The lamps were made by Mr. G. Howard, of Berners-street. All the oak furniture of vestries, chairs for chapel, and other accessories were made by the contractors to the designs of the architect.

The names of the fallen are cut on the walls of the north and south transepts in plain roman letters coloured red.



There is a small but very choice organ built by Messrs. Harrison, of Durham. The oak organ case was made by the contractors from the architect's designs.

The chapel was dedicated in the summer of 1922, but some of the details had not then been completed. It is now, however, finished.

Sir Charles Nicholson, Bart., F.R.I.B.A., is the architect.

Entrance Floor Plan: The Temple of the Scottish Rite, Washington, D.C.
Mr. John Russell Pope, Architect.

Temple of the Scottish Rite: Principal (Temple) Floor Plan.

The Merchants' Marine Insurance Co., Ltd New Premises, Cornhill, E.C.

This new building occupies an important site at the corner of Cornhill and Birchin-lane, and is designed as offices for the Merchants' Marine Insurance Company, who are in occupation of a large portion of the building. The remaining floors are arranged as offices to be sub-let.

The main entrance is at the corner of the two streets above referred to, and the entrance to the office floors is in Birchin-lane, where there is a staircase and passenger lift for the use of the tenants. The whole building is steel-framed in accordance with the 1909 Act, and the fronts are faced with Portland stone. The roofs are covered with red Italian tiles, and the turret at the corner is finished in copper. The fittings generally are in oak, very slightly darkened. The architects are Messrs. Campbell Jones, Sons & Smithers, of Dowgate-hill, E.C.

The general contractors are Messrs. Ashby & Horner, Ltd., and the list of sub-contractors is as

Page, electrical installation ; Siegwart Fireproof Floor Co., Ltd., fire-resisting floors ; Nollis Bros., wood-block flooring ; Improved Wood Pavement, wood-block flooring ; Fenning & Co., Ltd., granite ; Ames & Finnis, roof tiles ; Art Pavements and Decorators, Ltd., terrazzo-paving ; C. Smith, Sons & Co., ironmongery ; Waygood Otis, Ltd., lifts ; Caston & Co., Ltd., metal enclosures for lifts ; Crittall Freeman Bronze, bronze-work and collapsible gate ; Bellman, Ivey, Carter, Ltd., scagliola columns ; Lawford & Co., asphalt work ; J. W. Singer & Sons, Ltd., fascia letters and numerals ; Sankey, Sheldon, Ltd., lockers (metal).

The Temple of the Scottish Rite.

The Temple of the Scottish Rite is located on the corner of the Avenue of the Presidents, and a mile distant from the White House, Washington. It was designed by Mr. John Russell Pope to serve as the headquarters of the Supreme Council of Scottish Rite Freemasonry for the Southern Jurisdiction of the United States, and was completed and dedicated on October 18 last. The building stands upon a plot about 250 ft. square. Externally this building—developed from the well-known mausoleum erected by Queen Artemisia at Halicarnassus for the tomb of King Mausolus—is so treated as to front entirely upon the Avenue of the Presidents, the rear elevation displaying the staircase, which is so arranged as to remain external to the massive pylon, entirely given to containing a single central room on each of its principal floors. On the first entrance floor this entire central space, practically a big hall, is termed the Atrium ; and from the side opposite the entrance doorway rises the staircase to the floor above, at the back of which is placed the stock-room, with the reading-room on one side balancing the Supreme Council Chamber upon the other. On this floor the Atrium is flanked, right and left, by two suites of offices, in the one case for the use of the Sovereign Grand Commander, and in the other for the Secretary-General. The basement contains a large banquet-room beneath the Atrium, with offices, kitchens and other dependencies, while the sub-basement is occupied by the elaborate mechanical plant and the machinery necessary to carry on the structure and its offices.

The staircase, as it rises from the entrance floor, divides into two side runs to reach the landing in front of the Temple Room, to which the entire upper portion of the structure is devoted.

Built as the headquarters for the entire Southern Division of the chief Masonic Order in the United States, every regard was paid to permanency, durability, and the enduring massiveness that would aid the monumental aspect of so pretentious a structure.

MEETINGS.

July 27 *and* 28.

Institution of Municipal and County Engineers.—East Midland District Meeting. At Nottingham.

July 24—*August* 1.

Royal Archæological Institute.—Summer Meeting, Norwich.

FRIDAY, *July* 27.

Architectural Association.—Annual Prize-giving, by Mr. H. Corbett. At 34, Bedford-square, W.C. 1. 3.0 p.m.

With reference to our illustrations of designs for Oswald-street Bridge, Glasgow, Messrs. L. G. Mouchel & Partners, Ltd., of Victoria-street, S.W., inform us that the actual architectural design was prepared for them by Messrs. Henry Tanner, 3, Hanover-square, W.1.

THE WHEELWRIGHT'S SHOP.*

The unassuming title given to this volume might mislead us as to the importance of a record of waggon building ; of a hand-craft so deeply wedded to the traditional life of England as to be a part of its very being. Mysterious relations to nature, to locality, to agriculture and to use, are perceived which deepen our sense of the nature of this traditional craftsmanship in which the solid worth of the English character was so well expressed. It is part of the quality of this admirable book that the author is content to let facts speak for themselves, and it does not suffer from sentimental appreciations which sometimes accompany any review of old-world industries. He draws his conclusions from life and acquaintance at first hand—for it was his own business—with the wheelwright's craft. In the making of these waggons time is of relatively small account, throughout the aim is excellence. The quality of the work was the first consideration, for had not the waggon to last a lifetime? And for this reason the seasoning and selection of the wood was of the first importance. We are taken through the craft of the woodman, and get a glimpse of the traditional intelligence in its choice and seasoning—not less than six or seven years. It is worth thinking of this when wood is lacerated under the machine before the sap is out.

It is not, however, only the excellence of the work, it is the quality of the workmen as well. We read of George Cook, of whom the author writes : " I never could get axe or plane or chisel sharp enough to satisfy him ; but I never doubted then or since that his tiresome fastidiousness over tools and handiwork sprang from a knowledge as valid as any artist's. He knew not by theory, but more delicately in his eyes and fingers." We touch here on a fact of craftsmanship which was a preponderating influence in the excellence of the work, for much of it was not only traditional but intuitive. Our friend George could not have given the reason why he did this or that, but in him, as the author says, " was stored all the local love of what good wheelwright's work should be, century-old tradition was still vigorous in them." This tradition, carried on intuitively, included the knowledge of local conditions, the lie of the land, the requirements of agriculture, the kind of roads, and the character of their customers, all deeply rooted in a hereditary knowledge of the wheelwright's craft. " The very grain of the wood held secrets for them. I never came on a quick substitute for the seasons in drying timber," says our author, and adds, " My first experience of steamed Canadian ash made me very sceptical. It looked nice ; but it seemed a little ' frow ' or ' biscuity ' under the workmen's tools ; and after three years of use it crumbled into touch-wood." This would not do for waggons built to last a lifetime, and no second best was of avail. Craft knowledge in these old industries was learned as an artist learns to reach results. We find the beauty of these waggons determined by no merely sentimental approach—the chamfering of the woodwork, and the exquisite tapering of the shafts has for its primary object the lightening of the bulk, for, in order to lighten the horse's load, the waggon must carry no unnecessary weight. Use is the root on which beauty flowers. Nor did wood suffer then as now. The timber, as the author says, was " far from being a prey, a helpless victim to a machine."

A faithful record such as this, which contains in it the day by day history of a traditional craft and of the human relations born through it, and the standards of life it sustained, leaves us with much to ponder over. These old craftsmen had not learned to make things badly, nor were they forced to do so, for one reason that they would not have been forced. So the life of a waggon would stretch to 70 years. The Windsor chair in my study has given rest for over a hundred years, and has a century of further service before it. This raises the issue whether the economy of production for profit instead of for use is preferable, seeing what it brings with it. The enormous excess of production to-day of necessary and unnecessary things gives employment, no doubt, to a largely increased population, and is carried on not only to supply our own wants, but the markets of the world. But if, through increasing the quantity, we have lowered the standard of the thing produced, has not life suffered meanwhile in that the pleasure and pride has gone from its labour? It is this human question that remains paramount. If men lived by bread alone we might be content in carrying on civilisation at the cost of lowering civilisation, but instead of rest it has brought unrest ; instead of union it has brought division ; instead of the assurance of life it is leading thousands to doubt of it. Wages are much better to-day than when this wheelwright's business, which industrialism has destroyed, kept men happy, though poorer than ourselves, because they had that freedom to excellence, to beauty, which the industrial age has undermined. Beauty can only come of labour rightly and faithfully applied—the crown of its effort. Art will not be scamped—is not mocked. But though saying this, the matter is not a question of alternatives, of returning to the ancient provincial life of England. The new era is here, and out of itself must the new better world be woven. Let us conclude the review of a book which contains in it so much that is instructive for us, and which we can praise so heartily, with the following passage from the author's chapter on " Prices " :—

" But no higher wages, no income, will buy for men that satisfaction which of old—until machinery made drudges of them—streamed into their muscles all day long from close contact with iron, timber, clay, wind and wave, horse-strength. It tingled up in the niceties of touch, sight, scent. The very ears unawares received it, as when the plane went singing over the wood, or the exact chisel went tapping in (under the mallet) to the hard ash with gentle sound. But these intimacies are over. Although they have so much more leisure, men can now taste little solace in life of the sort that skilled handwork used to yield them. Just as the seaman to-day has to face the stokehole rather than the gale, and knows more of heat waves than of sea waves, so throughout. In what was once the wheelwright's shop, where Englishmen grew friendly with the grain of timber and with sharp tools, nowadays untrained youths wait upon machines, hardly knowing oak from ash or caring for the qualities of either. And this is but one tiny item in the immensity of changes which have overtaken labour throughout the civilised world. . . That civilisation may flourish a less-civilised working-class must work. Yet others wonder at working-class ' unrest.' But it remains true that in modern conditions work is nothing like so tolerable as it was, say, thirty years ago ; partly because there is more hurry in it, but largely because machinery has separated employers from employed, and has robbed the latter of the sustaining delights which materials used to afford to them."

R. H.

* " The Wheelwright's Shop." By George Sturt (George Bourne). (Cambridge : University Press. Price 12s. 6d. net.)

Sir E. Geddes' New Residence.

Albourne Place, near Hurstpierpoint, Sussex, a comfortable country manor house, with interesting features of seventeenth-century work, is being restored and improved for the occupation of Sir Eric Geddes, who is shortly to take up residence there, and for whom Messrs. Knight, Frank & Rutley acted.

Design for Central Offices and Public Hall, Thames Embankment. By Professor Pite

(From *The Builder* of April 26, 1902)

["This design was prepared some time since for a large site then vacant at Whitefriars, fronting the Embankment, for a combination of offices, warehouses and printing works, with a great public hall for religious meetings. The buildings were arranged with a central mass to emphasize that they formed grouped departments of one organisation, the importance of which was to be expressed both in the building and the site. Surrounding rights of light indicated the advisability of setting back the upper stories, internal areas were provided, and smoke and ventilating shafts were grouped in the central tower."—*The Builder*, April 26, 1902.]

MEDIÆVAL CROSSES.

By F. SYDNEY EDEN.

Prior to the sixteenth century changes in religion, it was the universal custom to set up in all prominent positions, wherever multitudes forgathered and wherever the tired wayfarer was likely to set him down to rest, the symbol of man's salvation. In the market place, in the churchyard, at the cross roads, in the shady dell, and on the mountain path one saw the cross.

Such had been the good custom; not only during the period covered by our chroniclers, but, far away, in the dim mists of antiquity, this use of the cross is discerned. Still we see the rude monolith, roughly chipped into the form of a cross, on the wild moorlands of the northern and western parts of England—in Cumberland, Wales, Devon and Cornwall in particular.

Coming to historical times, the more elaborate sculptured crosses of Ireland, of which some thirty are known, attract notice. Of these the finest example is, probably, Muiredach's Cross (see p. 126) at Monasterboice (early tenth century). Its height is 19 ft., and the shaft is carved with stories from the Bible set in rectangular panels within a cable moulding, while the three upper limbs are occupied, on one side, by the Crucifixion, and, on the other, by the Last Judgment.

Here we may note an interesting point, evidencing the fact that the master-idea which inspired all outward forms of Christianity was the cross, with its lessons of vicarious suffering and Judgment deferred. As we see the Crucifixion on one side of these ancient crosses and the Last Judgment on the other, so, when painted glass came to fill the windows of the churches of later times, we see the same plan—in the east window the Crucifixion and in the west window the Last Judgment.

From contemplation of the sufferings of Our Lord, shown in the east window, the Christian learnt to bear gladly burdens which were not his, and, on leaving the church, the west window, with its picture of the Final Judgment, gave assurance that, at last, crooked things should be made straight, and all wrong estimates should be rectified. The top limb of Muiredach's Cross is capped with a square finial having a gabled roof, suggesting the idea of a reliquary or shrine.

Of English crosses of pre-Norman days there are several examples extant, all north of Humber save one—that at Crowle in Lincolnshire. Of these the best are the Bewcastle and Ruthwell crosses, which are carved, the former with figures of Our Lord, St. John with the Agnus Dei, a man carrying a hawk, and panels of interlaced work, foliage and animals, and the latter with subjects from the New Testament and the Apocryphal Gospels, Latin inscriptions and foliage and birds. Both crosses, also, bear inscriptions in Anglian runes, from which we learn that the Bewcastle cross was erected about A.D. 653 as a memorial to Alefrith, King of Northumbria.

Interesting as these very ancient crosses are, it is to the thirteenth, fourteenth, and fifteenth centuries that we must turn for the High Crosses which most appeal to us of to-day; for their architecture—always some form of Gothic—is in a style of which examples abound in every part of our islands.

Leaving out of consideration the large class of wayside crosses, the least decorative of their kind, but not, on that account, of the less interest, we may notice a few examples of crosses in market places and churchyards.

Every market place had its cross, though to-day we may look for it in vain in many an ancient market square. In some cases, the old market places have themselves disappeared, their convenience as thoroughfares having caused them to be straightened out into ordinary streets. Who would recognise in the street called Cheapside in the city of London the ancient market of West Cheap, and who would think to look to-day for the cross which of old times stood there, about the spot where Milk-street joins Cheapside?

Sometimes the steps upon which the cross stood, with, perhaps, part of its shaft, are left, but oftener the whole structure has gone. Even then, however, so persistent is custom, we may often know where the old cross stood by observing the spot in the market place where public proclamations and announcements are made, and, in this connection, one may call to mind that the written or printed notices of such things are usually dated from "the market cross." Public meetings, too, are often called "to be held at the market cross," when, in fact, no cross has stood in the market place for many years, and the meetings will be held, as everybody knows, in a building, usually the town (or guild) hall, contiguous to the site of the vanished cross. This, among other instances known to the writer, is the case at Thaxted, in Essex; there, meetings of the polls—one may designate them folk motes—are called for the market cross, but they are held in the beautiful fifteenth century hall of the Guild of Cutlers—once the governing body in Thaxted—in front of which the cross formerly stood.

The steps of the market cross were, as one might expect, used by vendors of goods as convenient places for displaying their wares, and this practice led to the calling of the cross after the things laid out on its steps, *e.g.*, the Butter Cross at Winchester, set up in the fifteenth century by Cardinal Beaufort, and still in its old place, although it had a narrow escape from destruction in the eighteenth century, when the Town Council agreed to sell it for paving purposes. Fortunately, however, Winchester men rose in its defence, and stopped the contemplated outrage.

A time would, of necessity, come when the steps of the cross would no longer accommodate all who required this convenience, and the need for more room for setting out goods for sale would arise. To meet this demand, a large space, more or less circular, was covered with a vaulted roof, tapering in the centre, supported by buttressed pillars, the whole surmounted by a cross. Of this kind of cross, of which the finest example, perhaps, is the restored Poultry Cross at Salisbury, many are still standing. From structures such as these it seems likely that the market house—a large building capable of giving stall space to all of every craft and trade attending the market—gradually developed, and it is a sad comment upon trade conditions of to-day that the cross is so seldom seen atop of our market houses and that architects have forgotten that the market house, big and imposing as it may be, had its origin in a simple stone cross set on a few steps.

A cross which has a special historical interest may here be noticed—the very fine example of fifteenth century work now at the head of the main street at Hedon, in the East Riding of Yorkshire, the Early English and Perpendicular church of which has been called the "Pride of Holderness."

Judging from the present position of this cross alone, one would be warranted in classing it as a market cross, but, if tradition is to be trusted, that was not its original character, nor was Hedon the place where it was first set up. The known facts about it are that in 1818 it was standing on the coast close to the sea, at Kilnsea, on the Yorkshire side of Humber-mouth; that, in that year, it was taken down and re-erected in the park at Burton Constable, and that it was, in 1832, removed to its present position at Hedon.

For the story of this cross prior to 1818 we are dependent on tradition, which tells that it was erected at or near Ravenspur, a once prosperous Yorkshire port which was mostly washed away by the sea in the second half of the fourteenth century, to commemorate the

Cross at Hedon, Yorkshire.

Cross, Buckland Churchyard.

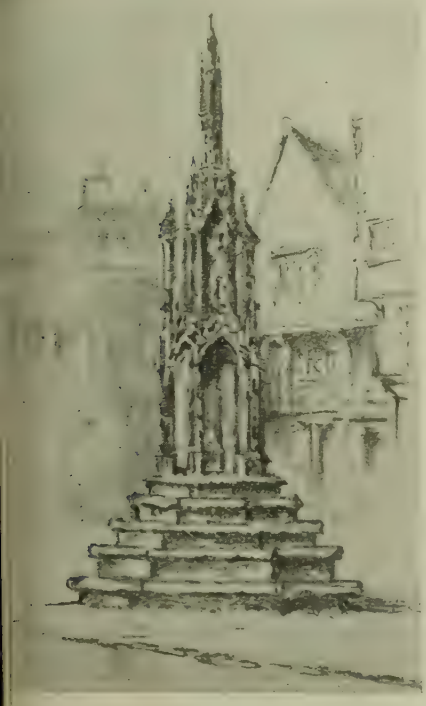
landing thereabouts in 1399 of Henry of Bolingbroke, afterwards King Henry IV, and, subsequently, the sea still encroaching, it was removed to Kilnsea.

This tale may be wholly correct, but, perhaps, there has been some confusion between the landing at Ravenspur of Henry of Bolingbroke and that of Edward, Duke of York, afterwards Edward IV, at the same place, in 1471, and it may be that this cross is in memory of Edward's, not Henry's, coming to Ravenspur. The fact that one of the shields round the capital of the shaft bears what looks like the arms of de Burgh—a red cross in a gold field—favours this view. The coat of de Burgh did not belong to Henry IV, but it was quartered by Edward IV in token of his descent, through the Mortimer family, from Elizabeth, daughter and heiress of William de Burgh, Earl of Ulster, and it is scarcely likely that, in the fifteenth century, when heraldry spoke truth, a memorial to Henry IV would have borne an heraldic bearing to which he had no title, and to which he would never have laid claim. The carving of the head of the Hedon cross is elaborate. On the west side the sculpture represents the Crucifixion, with Our Lady and St. John on either side of the Cross, and a seated figure of Our Lady—two figures supporting a crown above her head—on the top limb. On the east side of the head is carved what appears to be the Blessed Trinity enthroned, the animals below the throne having reference, apparently, to the beasts of the Apocalypse. Round the capital of the pillar are four shields, supported by angels, alternating with fleurs-de-lis; on one of the shields, as already mentioned, are the arms of de Burgh, and on another is a device resembling a W, which is, probably, intended for the merchant's mark of the donor of the cross.

It is likely that cemetery crosses existed before permanent churches, for one of the earliest needs of a Christian community has always been a burial ground. The church would, at first, have been represented by a small wattle-built oratory ancillary to the cemetery, though, in accordance with ancient tradition, the stone-built churches of later days invariably had their churchyard cross, which, by that time, had become an adjunct to the church.

Churchyard Cross, Ampney Crucis.

Comparatively few ancient churchyard crosses have survived in anything approaching a complete state, not so much by reason of intentional destruction as by the natural effects of non-repair. Few of them retain their sculptured heads, for, being often constructed of several stones, they would, in the absence of repair, necessarily tend to fall to pieces owing to the action of the weather. There are more old crosses which have the shaft, or a considerable part of it, still standing, while, in many cases, nothing remains but the base of the shaft and the steps or altar-like table on which the cross stood, as at Bickleigh, Devon.



A fine example—partly restored, it is true—of a thirteenth century churchyard cross in its original state is that on the south side of Ampney Crucis Church, near Cirencester, in Gloucestershire. The head is sculptured with trefoiled niches facing the cardinal points; on the east side is the Crucifixion, with its usual attendant figures of Our Lady and St. John, facing west is Our Lady with the Divine Child, and single figures are on the north and south sides.

Sampford Spiney Cross, Dartmoor.

Of churchyard crosses which retain part of the shaft we may mention that at Mileham, in Norfolk, of fifteenth century date. Of the cross itself, the base, a small piece of the shaft, and the top crocketed pinnacle—much weathered—remain, while the table, except for the action of the weather, is in its original state. On the sides and ends of the table are quatrefoiled panels enclosing shields of arms.

The revived interest in ecclesiology which has characterised the last century or so, is responsible for a good deal of repair and restoration of decayed churchyard crosses. Some of these attempts have not been altogether happy; but, as an example of a sympathetic and, on the whole, successful restoration of a churchyard cross, one would like to commend the restored cross on the north side of the old church on the west cliff at Folkestone, in Kent.

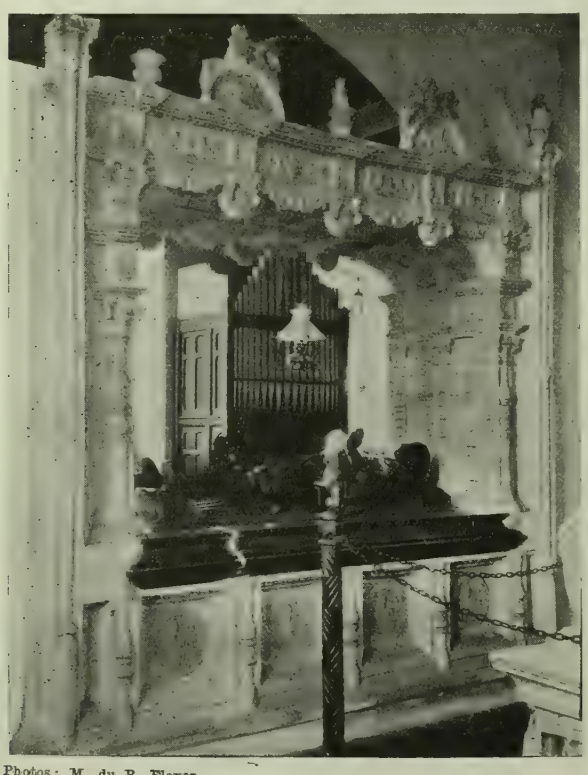
The Butter Cross, Winchester.

Churchyard Cross, Folkestone.

THE ROYAL ARCHÆOLOGICAL INSTITUTE.

At a meeting of the Royal Archæological Institute, held in the apartments of the Society of Antiquaries, Burlington House, Piccadilly, W., recently, a lecture was given by the Rev. J. K. Floyer, D.D., F.S.A., on "English Brick Buildings, Henry VII—VIII."

The lecturer said there was a fair amount of evidence to show that the great revival of building in brick which took place in the fifteenth century had its origin in France, before or at the same time as it came to the Low Countries; that the artificers in brick in England were Flemish, and that through those brick workers the industry was revived and systematised. The art of making bricks was retained in England, especially in the eastern counties, through the Middle Ages, and though it was at one time at a very low ebb, yet the demand for large houses by the returned warriors from France in the early fifteenth century gave rise to the fashion of building in that style and in certain forms, not only in the counties where stone was scarce, but practically all over the Midlands and South of England. The word "brick" was of French origin and was not found in England before the fifteenth century. In the building accounts of Lincoln's Inn, 1517–8, an entry was found for the making of tiles, called "Les Brikes."



The brickmaking industry was not recognised in the Act of 14 Ed. IV, which regulated artificers, showing that it was still at that time a foreign industry, although the same Act regulated tile-making. In the accounts paid for building Stonor Manor House, Oxon, 1416–7, reference was made to "Les Flemynges," "de Brykes," and "brikes," showing that Flemings were using French terms for their trade employed in the manufacture of material for an English country house. The bricks averaged 4½ in. by 2¼ in., with a length of 9 in. to 9½ in., and were set in old English bond, though irregularly carried out. The same kind of brickwork was used at the same period in the French-speaking parts of Belgium; for example, Cloitre de Tervueren, a building which was probably in existence in 1407, when the Duc de Brabant made it his temporary residence. The work of the almshouses at Ewelme, the licence to found which was dated 1437, within a few miles of Stonor, was of the same kind, and the entrance porch to the cloister was very similar to a recessed arch at the Hopital de St. Jean at Bruges. It looked as if the Flemish workmen had gone on to Ewelme from Stonor. The accounts of the building of Kirby Muxloe in Leicestershire gave some details of the way in which a large building of brick was constructed at that period.

A gang of Welshmen was procured as navvies; the bricks were burnt near by; the foremen were English, but some at least of the brickmakers were from the Low Countries. The bricks were delivered in batches of 13,000 to 24,000 every week for a considerable period, and altogether the payments were for 1,342,500 bricks actually laid. Some light was also thrown upon the way in which the patterns of brick headers were worked, which were characteristic of the fifteenth and sixteenth centuries, but in the later buildings and in those of Henry VII's time the patterns were more often laid quite regularly in lattice work, such as at Bishop Fox's gateway at Farnham, 1501–29. In the earlier ones they appeared as frets, monograms and devices. Examples were to be seen at Henry VII's castle at Richmond, Tattershall Castle, Lincolnshire, and other places; but regular lattice patterns were commoner and were produced by the bricklayer and not added afterwards.

At Tattershall Castle, about 1450, the bricks were 8 in. by 2 in., but that appeared to be an exception, as the standard brick at the time when Flemish builders were at work was 9¼ in. by 4½ in. by 2¼ in. The length of 9¼ in. instead of 9 in. pointed to the measurement being a quarter of the Flemish ell of 37 in., which was a standard long measure in England up to 1553. The general characteristics of brickwork before 1500 were that it was laid in old English bond; short bricks of about 6 in. or 7 in. were often worked in to make a better cover for the joints; the bricks were very rough and often uneven, which necessitated a good thickness of mortar. Down to 1500 mouldings or ornamental details were not moulded on the bricks beforehand, but were carved with a chisel and rubbed down by a superior craftsman known as a hewer, after the bricks of ordinary size had been laid. The chimneys at Hampton Court showed this work.

Generally, very little stone was used even for dressings; windows were high and narrow. In the absence of stone lintels a long, flat arch was a difficulty, but in the church at Layer Marney, Essex, the builders put brick transoms in the windows, which had lasted more than four hundred years without sagging, though an iron rod running through them was used after 1500. At that period moulded bricks also appeared and were used as well as carved ones.

Another foreign influence was felt when Cardinal Wolsey introduced Italian workmen. Tonigiano, a Tuscan, executed the tomb of Henry VII at Westminster. Others who came over were Benedetto da Rorezgano and Giovanni da Majano, and both were employed in the decoration of Hampton Court, 1521, and the latter carried out the large terra-cotta medallions of the Roman Emperors. The Italian architects and sculptors introduced terra-cotta and moulded brick ornament which never seemed to fit the places where they were introduced and bore no relation to the architecture; the harder material did not harmonise with the brickwork. It was doubtful if they erected any houses in England, their work being confined to embellishment of the large brick houses which rose at that time all over the country, though chiefly in the eastern counties. Because their work was not a natural growth, or outcome of architecture, but only a fanciful excrescence, a school was never produced in England. They remained for about twenty-five years, employed mostly in Norfolk and disappeared as silently as they came. Typical examples of their work were Sir Henry Marney's tomb, Layer Marney, Essex; three sedilia at Wymondham, Norfolk, and Bedingfield Chapel in Oxborough Church. It was generally discernible by the material, its distinctive style, lettering of the inscriptions and shape of the heraldic shields, which were equal in width at top and bottom, bowed in at the sides and with a rest for the lance cut out of one border. Oxborough, one of the finest of English brick houses, 1482, was completed when the Italians arrived, but at Layer Marney, which was not so far advanced, they were employed to make in terra-cotta some of the upper window

Sedilia, Wymondham Abbey.

mullions and the ornaments of the parapet. They finished the house, worked the tombs of some of the Marney family, and made an attempt to imitate Gothic in one of the windows, with a very curious result.

Some of the best developments of purely English brickwork of the fifteenth century could be seen in such buildings as Tattershall Castle; Middleton Towers, Norfolk, before 1460; Falkbourne Hall, Essex, 1439; Hatfield Old Palace, Herts, 1479–86; Oxborough, 1482; West Wickham, Kent, about 1470; Jesus College, Cambridge, and Alcock's Tower in Ely Palace. The effect of Italian decoration could be seen at Layer Marney; Sutton Place, Surrey; East Barsham Manor House, 1538; Great Dressingham, about 1542; Great Snoring Manor, Hethwold, Norfolk. All those presented fine examples of terra-cotta work in plaques and mouldings, and were finished between about 1520 and 1545.

Speaking of prices, the lecturer said in the building accounts of Stonor, 1416–7, bricks were paid for at the rate of four shillings a thousand. The higher grade brickmaker received sixpence a day, and labourers fourpence. The higher grade man paid fourteen pence a week for board and lodging, and the labourer ten pence. At Lincoln's Inn, 1568, bricks were paid for at three shillings per thousand, while at Grafton, Worcestershire, in the same year, a labourer received sixpence and a bricklayer elevenpence per day.

The lecture was profusely illustrated with lantern slides.

BIRMINGHAM ARCHÆOLOGICAL SOCIETY.

The second excursion of the season was made recently to Wootton Wawen. A halt was made at Lapworth Church, whose chief features were described by the Rector, the Rev. F. L. Bell. Attention was directed to work of various dates, indicating the gradual growth of the structure from a comparatively small Norman building. Special notice was taken of the small chapel at the west end, which, it was thought, must have been a relic chamber or chapel, and also of the tower on the north side of the church, which was originally isolated from the main building. The party then moved on to Anstey Manor, where they were hospitably entertained by Mr. W. J. Feldhouse.

Wootton Wawen Church, one of the most interesting mediæval buildings in Warwickshire, was described to the party by the Vicar, the Rev. L. A. Pollock. The greater part of the tower in the centre of the church is of Saxon construction; the north wall of the nave is of Norman workmanship, and many examples of the later styles can be seen—in fact, a complete history of Gothic architecture can be found in this one building.

ROYAL SANITARY INSTITUTE CONGRESS.

The thirty-fourth Congress of the Royal Sanitary Institute will be held at Hull from July 30 to August 4. The eleven sections and conferences arranged cover the whole range of official and personal health, and these several meetings will be presided over by well-known authorities:—Sir William Hamer of the London County Council; Dr. J. R. Kaye, Medical Officer of Health to the West Riding County Council; Dr. Eustace Hill, Medical Officer of Health Durham County Council; and Professor H. R. Kenwood, C.M.G., of the University of London.

An attendance of about 1,000 is expected, being largely officers and representatives of Government Departments, Municipal and Public Health Authorities, but including also many representatives of Foreign Governments, Dominions and Colonies of the Empire. The opening address of the President, the Right Hon. T. R. Ferens, P.C., J.P., and the lecture by Mr. B. Seebohm Rowntree, J.P., will both deal with the latest movements for promoting the welfare of workers in trades and occupations. Water supplies will be dealt with in the lecture by Sir Alexander Houston.

The important questions of housing and town-planning, and dealing with slums under present conditions, will be given due consideration, and there is a conference specially of Port Sanitary Authorities. Disease will receive attention from its causation and preventive point of view, and recent investigations with regard to cancer, tuberculosis and diphtheria will be discussed, as well as heliotherapy and the advantages of sunlight and open air.

As a practical demonstration of many of the subjects a Health Exhibition is held in connection with the meeting.

THE ARCHITECTS' AND SURVEYORS' ASSISTANTS' PROFESSIONAL UNION.

Members of the Architects' and Surveyors' Assistants' Professional Union visited the works of Messrs. John Knowles & Co., at Mount Pleasant, near Ashby-de-la-Zouch, on July 12. The party were interested in the manufacture by this firm of the stoneware drain pipe, witnessing the intricate processes through which it passes from quarrying the raw clay until it emerges complete from the kiln. A remarkable experience for the visitors was the descent of the pit shaft where the fireclay used in the manufacture of refractory wares is obtained. The light of an acetylene lamp showed the difficulties contended with in obtaining this class of clay. Roads led in all directions. Here and there outcrops of coal, clay of an inferior nature, and shale could be seen, all having to be worked before the good fireclay was reached. Continuous pumping has to be maintained to keep the pit anywhere near dry, but here economy was in evidence; the water pumped was not wasted, but passed through a softening plant and re-used for divers purposes. Later the quarries and other parts of the works were visited.

Civil Service Rifles Memorial.

A column will shortly be erected in the square at Somerset House to the memory of members of the Civil Service Rifles who lost their lives while serving with the regiment during the war, 1914–1918.

THE BI-CENTENARY OF SIR JOSHUA REYNOLDS.

Among the most precious personal relics of the great President are the two sketch books in the Sir John Soane Museum. Here we are in touch with him as the eager student whom chance and a good friend in the Navy has landed on the classic shores of Italy. In these pages are to be found pencilled memoranda of the masterpieces that attracted him and were destined afterwards to be reflected in his own work. The old masters, in fact, are the fixed pole round which Reynolds' work, for all its variety, always revolved. He had the settled conviction of a conjunction of "Nature" and "A Standard of taste" as a permanent criterion, subject always to that "breaking through," which is the salvation of the artist in practice, however dominant his theory may appear to be.

This high conception was the subject of his Discourse in December, 1776, when he handed to John Soane, a promising pupil in the Royal Academy Schools, the Gold Medal for the design of a triumphal bridge. With this high distinction he gave such words of praise, hope, and encouragement to the young student as seemed to his fellows to be even more worth having than the medal itself. Sir John Soane acquired one or two books on architecture containing Reynolds' autograph, and the famous picture of Kitty Fisher, "friend of Brooks," known as "The Snake in the Grass," or, alternatively, as "Love Unloosing the Zone of Beauty." It is impossible to say why Soane chose that particular work to represent Reynolds in his museum of contemporary art. Although Soane's life was almost equally divided between the 18th and 19th centuries, his attitude and outlook remained with the former period. He gathered up, in fact, the recollections of the great age, into which he was born and had passed his early life, and has handed down to us priceless relics, that a new "after-the-war age" had already condemned to neglect.

An unfortunate, but easily understood, gap in Soane's Note Books, following on his marriage in 1784, makes it impossible to say whether he ever had any relations with Reynolds, after his own return from Italy in June, 1780. Reynolds' death in 1792, the same year as that of Robert Adam, was too early for him to have seen any notable work of the young architect to whose future he had wished such success. If we could imagine his life prolonged to 1805 he would most assuredly have been satisfied with the fulfilment displayed in the north-western corner of the Bank. An artist so insistent on composition, that he could enlarge upon Robert Adam's prior tribute to the ill-treated Sir John Vanbrugh, would have hailed with satisfaction a masterpiece after his own heart. It is as certain as anything can be that the last half of the eighteenth century in England has in its art a definite character, as clear and distinct as that of any other great epoch in art. There is a certain common thread which runs through and unifies the work of Reynolds and Gainsborough, Adam and Chambers, Bacon and Flaxman, however much they had differed in their lifetime. This unity in divergence is only to be realised by the lapse of time. It is in fact the most realisable form of that universality to which Sir Joshua Reynolds desired to appeal.

It may not be absolute truth that the works of the ancients are superior by reason of time to those of the moderns, but it is clear that a galaxy of artists of such a half century does establish a standard, by which we are inevitably judged.

An examination is being conducted by the Yorkshire Archæological Society of the Roman Coast Watch Fort at Carr Lane. This is one of a chain of old forts along the coast.

ROMAN SITE OF CIMIEZ, NICE.

A few minutes from Nice is the remarkable Arènes, or Arena, of the ancient Roman site of Cemenelum, or Cimiez as it is now called, the ruins of which overlook the whole of Nice. Not much appears to be known very accurately about these remarkable vestiges of the past. Monsieur F. Brun, author of a "Description des Bains de Cemenelum," printed in 1877, and of a "Promenade . . . dans Nice," 1894, gives a short notice of them. But they are worthy of an exhaustive and scientific investigation. The town, called also by some writers Camenelion, had at one time no fewer than twenty-three thousand inhabitants, and is reputed to have begun its existence about A.D. 130. In the garden of the Villa Garin are the remains of a so-called Temple of Apollo, now doing duty for a summer-house. The Temple of Diana was converted into a religious house for Capuchins in 1543. It contains a very old group of St. Francis and the four-winged Seraph who appeared to him in a vision. The church is ornamented with five turrets or pinnacles, and possesses many fine and valuable old paintings, including a *Pietá*, by Lodovico Brea the elder, in 1478. Other large pictures are by Francesco Brea, known as the Nizzard, *i.e.*, of Nice.

The chief glory of Cimiez is its Arena, through the diameter of which runs a wide road on the right hand from the high road to Nice. This most interesting building is capable of holding eight thousand spectators. The dimensions are stated to be fifty-five mètres long by thirty-four wide; the amphitheatre sixty-five by fifty-four. Brun gives the width of the *podium* at three and a half mètres, and of the *balteus* 1.80 mètres. This writer attributed its date to the third or early fourth century. Much of the masonry, which consists of cubical stones, fairly, but not finely, squared and faced, is crumbling away, and a good deal of it has fallen from its places for want of attention; the whole structure, may we call it the *spectatorium*, is bounded by a high and very massive wall exhibiting a consecutive circular arcade of small arches built in the prevailing fashion of provincial Roman work without voussoirs, or abaci.

Another view of the entrance shows the road which bisects the arena, the lofty arch at the side of the half-destroyed main entrance arch, and the character of the masonry which comprises the facing of the walls.

A further view, taken from the interior of the circus, shows the arched entrance or exit opposite the imperfect arch; the raised circle on which the front row of spectators were stationed; and the arcading of the upper row of the less-distinguished personages, with occasional passages leading from both the upper and lower tiers to accommodate ingress and egress, and to facilitate the entry of the gladiators, actors, captives, wild beasts, and other details provided for the delectation of the conquerors' demand for *panem et circenses*. The standing figure facing the centre, on the right-hand side of the arch, enables one to judge the dimensions of the whole building. This fine relic, although not presenting so great an ensemble as that at Fréjus, representative as it is of one phase of ancient Roman manners and customs, deserves the most conservative and careful treatment throughout, if its gradual decay from weather and wantonness is to be arrested. That it has withstood the vicissitudes of nearly two thousand years speaks well for the solidarity of its work and the care of its constructors.

If the Society for studying antiquarian remains in the South of France, which has been recently suggested in this journal, should materialise, as we hope, this is one of the many sites which rightly come within its scope.

Cimiez, Nice: Entrance to the Arena.

HALF AN HOUR IN YORK.

By KENNETH GLOVER.

A man finds in York what he finds in many other cities in England—that strange, disturbing mingling and contrast of the ancient and modern. York is particularly full of these contrasts. One gets the first astonishment in the fine railway station, a quarter of a mile long, and standing no Gothic nonsense. And this avoidance of Gothic forms is in itself astonishing in England, where usually the presence of a cathedral was sufficient during the nineteenth century to impose Gothic forms on the stations and other buildings. But here at York we have a fine curved platform with sturdy Corinthian columns supporting the wide spans of the roof. The dim perspective broken by the dark forms of footbridges and lit up by white steam or grey smoke is unquestionably impressive. And if, as occasionally happens, some railwaymen begin singing a few lines of a chant-like part song, the poetical traveller will agree that the Minster is not alone York's attraction.

One crosses a bridge flanked by old towers and buildings which are a delicious patchwork of brick, stone and tile. One of them has stone walls, but the joints are patched up with brick, with delightful consequences. Look up and here is the cathedral, not so impressive, perhaps, as Durham, but a great pile, a testimony of the loving labour of man and of his conception. You go in, I think, by the transept door and at once the impression is of vast spaces and remarkably fine scale. The thunder of the organ fills the great voids; and an amber glow, a quiet, cool light filters in through the wonderful old glass. Here is none of that grand massiveness of Durham, none of that weightiness, that sense of terrible permanency, that axe-cut cyclopean rotundity. Space and air and colour—that is York. One is dwarfed. Look away, and in remote distances one sees other pigmies admiring this wonder. High above the floor other mites are repairing the old glass. The old glass! What character those saints have, and what splendour of crushed jewels are these marvellous old colours. But what has time not done for them? That gold of imprisoned sunlight, that blue of Mediterranean seas, that green of the cool desert oasis—what alchemy produced these tints? Some strange, bad-tempered monk sat with strained vision and watched dark and prolonged processes producing these tints of Heaven.

And one saint in the nave you will never forget if you see him. He looks from his window with something of contempt, but his features bear the mark of suffering of a thorny pathway to peace. He is like that man of Durer's who glares from the canvas. Looking at this York face you turn away with a shiver; the thing is alive in some obscure fashion. One last look round, and so into the quaint streets again.

Internal Staircases.

"Architect," writing to *The Times*, says: "It should not be forgotten that smoke more than fire is the enemy of human life in buildings in which persons sleep, and for that reason the internal staircases should be enclosed on all floors by solid partitions and doors provided at suitable points to prevent smoke spreading. Where a second internal staircase is not practicable, and an outside staircase is for some reason out of the question (if a building is very much hemmed in), it may be practicable to subdivide the main staircase, so as to prevent its forming a flue from the bottom to the top of the building, but this is a matter on which expert advice is essential."

EXHIBITION NOTES.

THE LONDON SCHOOLS EXHIBITION.

(From a Correspondent.)

The exhibition of the work of the London schools which closed on Friday, July 20, after running a fortnight, was visited by nearly 40,000 people. Its purpose was three-fold—to enable the overseas delegates to the Imperial Education Conference to see the complete range of activity of the largest local education authority in the Empire; to let ratepayers in London know what they are getting in return for their generous support of education; and, lastly, to make known to parents the educational facilities available for their children. The London County Council wisely decided that the exhibition should also be a "school." Accordingly, 5,000 school children and older students and 400 teachers gave demonstrations at the exhibition of modern methods of learning and of teaching. The students demonstrating were often men and women of mature years; sometimes they were accompanied by their own children. It says much for the *esprit de corps* of the London schools that students who are themselves parents should be willing, by their example, to try to infuse enthusiasm in the younger generation for technical and general educational achievements.

The exhibits emphasised the practical instruction which has become so predominant a feature in education nowadays. Wood-working benches were fitted up and classes of boys from elementary and central schools were schooled at the exhibition daily in the presence of visitors. 76,000 boys are receiving manual instruction in the London schools. A section of the exhibition was devoted to the methods of teaching design in the elementary stages of woodwork, and, although the training is designed to be educational and not vocational, the standard of craftsmanship surprised the visitors. In the metalwork section the exhibits ranged from a centre punch up to a small horizontal steam engine. The boys at work (aged 13–14) gave demonstrations of cutting and fitting dovetails, mortices and tenons. A former foreman and manager remarked that much of the manual training work of the boys showed promise of exceptional craftsmanship.

The Junior and Senior Technical and Trade Schools in London specialising in the building trades were represented by many fine exhibits in plaster work, masonry, carpentry and joinery, plumbing, interior decoration, architectural design and building construction. Outstanding displays were those of furniture, and designs for interior decoration and furnishing from the Shoreditch Technical Institute; of woodcarving, mainly from the School of Woodcarving at South Kensington; and of architectural design from Regent-street Polytechnic. The School of Building at Brixton was represented by a series of exhibits which worthily upheld its reputation as the most important building school in the world. It is a significant fact that many boys who have had a good secondary school training are joining the technical schools for vocational training in the building trades. The exhibition should do much to impress parents with the dignity and delights of craftsmanship. Architecture, like poetry, expresses man's noblest efforts. The London schools, by training our young folk to appreciate the beautiful, are helping to build up the prosperity of those who can give it adequate expression.

The great revival in musical interest in this country is due very largely to the fact that the schools for the last decade have been trying to turn out good "listeners." Instruction in musical appreciation has done much for the musical professions and trades. The schools of London might now follow up the idea with classes in architectural appreciation. In this way the man in the street would gradually come to demand more insistently that our towns and our homes should provide noble expressions of the skill of the architect and the builder. Those who can provide this skill would then be relieved of the economic anxiety which so often prevents national progress.

NORWICH ARCHITECTURAL EXHIBITION.

The Norfolk and Norwich Association of Architects organised an exhibition of architecture, which was opened last week in the new gallery of Norwich Castle Museum, the opening ceremony being performed by the Sheriff of Norwich (Mr. Wm. Hubbard).

Mr. G. J. Skipper, presided at the opening proceedings, and among those present were the Sheriff of Norwich and Mrs. Hubbard, Mr. H. N. Holmes (ex-Lord Mayor), Sir Eustace Gurney, Mr. A. Cozens-Hardy, Mr. Basil Cozens-Hardy, Mr. W. R. Rudd, Dr. Chalmers, Mr. T. Glover, Mr. Hugh Ramage, Mr. Hobbis, and many well-known Norwich architects. The Chairman remarked that that exhibition was not to be taken as the final proof of their abilities as architects to produce anything that might be interesting. They had still an opportunity of pulling down Norwich and rebuilding it. Meanwhile architects were interested in town planning and he sometimes wondered why such a lot of money was being spent on roads around Norwich. It seemed as if the roads were intended for the purpose of taking people outside Norwich instead of bringing them in. The whole idea of the activity of the city's life and prosperity lay in the fact that people came into the city. Some of the great town-planning experts said that the traffic must be taken round the cities and not brought into them. That was done in the old railroad days. The stations were as a result kept from the towns, as at Ipswich and Colchester. Isolation of that kind meant stagnation. Architects were interested in town-planning as much as many people.

In declaring the exhibition open the Sheriff spoke appreciatively of its scope and character. Photography, he pointed out, was discovered in 1830 by an accident, after Englishmen such as Davy and Sir John Herschel, had helped it forward. But architecture itself dated back to the Tower of Babel and the Pyramids, so that by calling in photography to the aid of architecture they had youth supporting the ancient. If only they could have had brought before them the wonders of Solomon's Temple, Babylon, ancient Greece, and Rome, how much richer they would have been. They could, however, by means of photography, secure in all their grandeur the glorious cathedrals of their beloved land, the castles, and the stately mansions and halls, so that their successors should see the masterpieces of architectural design and structure. The citizens of Norwich would no doubt avail themselves of such a unique opportunity to see so fine a collection of present-day architecture.

Dr. H. C. Pattin, in moving a vote of thanks to the Sheriff, commented on the interesting examples of architecture, particularly domestic architecture, and expressed his pleasure that they had been shown some of the interiors, and warmly congratulated the architectural profession on so admirable a display.

THE LEICESTER GALLERIES.

There are two or three pleasant things amongst the modern French drawings at the Leicester Galleries, but for all this skill most of the subjects are anything but pleasant. A good antidote is to be found in some excellent paintings in the next gallery, where qualities of tone, colour and composition are to be found in almost every picture. The unusual, but charming colour and design in Campbell Taylor's "Motherhood," the brilliant and characteristic Lamorna Birch's "The White House," Charles Sims' "Repose," and Dacres Adam's admirable "Lincoln's Inn Gateway," are works which do modern art some real credit.

WALKER'S GALLERIES.

The subjects of exhibitions at Walker's Galleries are attractive ones, and both the exhibitions are of some exceptional interest. The early English water-colours include a great many interesting things by Turner, Cox, the two Cotmans, P. de Wint, Henry Holland, Leitch, Malton, Varley, Joseph Farington—altogether near a hundred-and-fifty pictures. The beautiful drawing of Loch Lomond by Joseph Farington, two brilliant sketches by Henry Holland, the eight drawings by J. M. W. Turner, ten small pictures by P. de Wint, and many other delightful pieces, make up an exceptionally good exhibition. Many of these drawings may appear to the loose thinking of our day laboured and tight in handling, but great qualities are to be found amongst them; it is a real pleasure to see such a collection. The pictures of British and American gardens show the artist, Mary Helen Carlisle, to be a capable painter with true appreciation of colour values and expert sense of picture composition. The glory of Californian gardens and wild flowers is finely suggested, and in some of the pictures the colour value and decorative sense are quite admirable as in Nos. 32, 39, 40, and 21. A charming pastel is "The Birthplace of Burns," full of nicely-modulated tone and colour. "The River Nore," "Twilight at Drummond Castle," "Evening at the late Col. Wauchope's," and "The Anchusa Border, Sutton," are outstanding examples of the artist's power; she knows where the essential values lie and how to emphasise them in a broad and telling way; and though brilliant and strong colour is set forth, there is no theatrical exaggeration or over-statement. This is one of the best exhibitions of garden effects by a woman we have ever seen.

RAMSEY ABBEY CENSER AND INCENSE BOAT.

The Ramsey Abbey Censer and Incense Boat have just been acquired for the Victoria and Albert Museum. These superb objects in silver gilt, which appear to have formed part of the treasure of Ramsey Abbey, in Huntingdonshire, represent the high-water mark of English goldsmith's work of the fourteenth century. The nation is indebted to the generosity of an enthusiastic connoisseur of mediæval art, Mr. C. W. Dyson Perrins, of Malvern and Ardross. Mr. Perrins has provided by far the greater part of the purchase money. These incomparable pieces of English mediæval craftsmanship are rescued at a moment when there was reason to fear they would be permanently lost to this country. The objects are now on exhibition among the great collection of ecclesiastical goldsmiths' work in the South Court of the Museum. The censer and incense boat were found, together with a group of articles in pewter and pottery, in the course of draining Whittlesea Mere in 1850. From the occurrence of rams' heads issuing from the sea, on the incense boat, and a ram's head on the pewter dishes, it is concluded that they belonged to Ramsey Abbey, which bore the same canting device in its arms. The censer is a work of great magnificence, richly gilt, standing 10½ ins. in height. It consists of a circular bowl, the foot pierced with a border of quatrefoils, within which stands a six-sided tower of open tracery with conical roof surmounted by a finial of foliage. The tower has three windows of decorated Gothic tracery alternating with three of plain lancets, recalling the design of the octagon of Ely Cathedral; and the whole is enriched with buttresses, crockets, and pierced and embattled crestings. The incense boat is simpler in character. It is long and narrow, with six-pointed foot, and one-half of the top is hinged as a lid, opening with a pyramidal knob. The surface is plain, set off by delicately enriched mouldings and an embattled edge. At either extremity the ram's head rebus of Ramsey forms a finial, and each half of the top is engraved with a rose; the whole is plain silver, except for the enrichments, which are gilded; its length is 11¼ in. The date of both pieces must be about the middle or possibly the second half of the fourteenth century.

The death occurred at his residence, in Kensington-terrace, Sunderland, of Mr. John Edward Nelson, a well-known slate merchant, aged 75. He had been in business on Wearside for half-a-century.

LEGAL SECTION.

NOTES ON CURRENT CASES.

Breach of Covenant: Forfeiture.

Under the Rent Act much has been heard of tenants sub-letting parts of the premises without the landlord's consent, and, indeed, Rent Restriction has turned the law relating to landlord and tenant upside down, for the landlord, far from being the master of his own house, is saddled with tenants who drag him before the Courts on the slightest pretext.

In case tenants who are not under the protection of the Rent Act should think the law a dead letter, we may refer to a recent decision, Elliott *v.* Boynton (1923 1 Ch. 422), which turned on forfeiture on account of breach of covenant not to sublet without the landlord's consent. In January, 1918, the plaintiff had demised to the defendant Boynton and another certain premises in the Goswell-road for a term of 14 years at a yearly rent of £280 and a sum in respect of insurance premiums, and the lease contained a joint and several covenant by the lessees not to "sublet or part with the possession of the premises or any part thereof without the consent in writing of the landlord first had and obtained, but such consent was not unreasonably to be withheld in the case of a respectable and responsible person." The lease also contained a proviso for re-entry if there was any breach of or non-observance of any of the lessee's covenants, in which case it should be lawful for the lessor at any time thereafter to re-enter upon the said premises or any part thereof. On October 20, 1919, November 3, and December 15, 1919, the lessees sublet parts of the premises to different persons without asking for or obtaining consent. On December 30, 1919, the plaintiff at that time being unaware of these sub-lettings, gave his consent to an assignment of the lease to the defendant Boynton alone.

On May 15, 1920, Boynton sublet another part of the premises and on October 28, 1921, he sublet to another tenant the portion of the premises he had originally sublet on November 3, 1919, these sub-lettings being made without asking for or obtaining the landlord's consent.

In March, 1922, the plaintiff for the first time became aware of these breaches of covenant and after a short correspondence he issued the writ in this action against Boynton and his sub-tenants, claiming possession of the premises and mesne profits, and an order was made for possession with mesne profits to be assessed. The Master made the assessment of mesne profits the sum of £841, basing them from the date of the first breach of covenant on October, 1919. The present summons was taken out by the defendant Boynton for a review of the Master's certificate, claiming that the mesne profits should be assessed as from the issue of the writ. The Court held that the mesne profits must be assessed from the date of the writ and not from the date of breach, for the lease is only determined from the time the landlord by some unequivocal act shows his intention to take advantage of the breach.

This seems only reasonable besides being the effect of decided cases, for the receipt of rent would operate as waiver of the breach, but the Court pointed out that the receipt of rent after the landlord had unequivocally shown his determination to put an end to the lease would not operate as a waiver, and the matter, as regards the amount to be arrived at in connection with rent, was referred to the Master unless the parties agreed, the order of the Court being that on the basis that the defendant admitted liability to pay rent down to the date of the writ then mesne profits were payable only from that date.

Covenants Not to Assign, Underlet, &c.

We may also very briefly refer to the case Jackson *v.* Simons (1923, 1 Ch. 373) which also turns on breaches of covenant. In this case the predecessors in title of the plaintiff had demised to the defendant a ground floor shop, and the lease contained a covenant that the defendant should not assign or underlet or part with the demised premises or any part thereof, or part with or share the possession or occupation thereof, or any part thereof, without the consent in writing of the landlord previously obtained, such consent, however, not to be withheld from a respectable and responsible tenant, and there was the usual proviso for re-entry in the event of a breach or non-performance of the covenants. The defendant had for payment arranged with a third party that part of the shop might be used for the sale of tickets in connection with a night club, during certain hours, and a removable partition was used during those hours, but it is unnecessary to detail the facts, as for the purposes of this note it is sufficient to say that the Court held what was done did not constitute an underletting as it conferred no interest or estate, but it amounted merely to a licence to use part of the premises, the defendant retaining the legal possession the whole time, and a person who retains such possession does not commit a breach of covenant against parting with possession by simply allowing other persons to use part of the premises.

The covenant in this case, however, went further than that, as it prohibited sharing the possession of part of the premises, and what was done did constitute a breach of this part of the covenant, but in this action for possession it was argued in defence that as the plaintiff had not complied with Section 14 of The Conveyancing Act, 1881, the action was not maintainable. The defence involves a technical point, but one which should be borne in mind. Section 14 of the Conveyancing Act provides that a right of re-entry or forfeiture under any proviso or stipulation in a lease for a breach of any covenant or condition in the lease shall not be enforceable by action or otherwise unless and until the lessor serves on the lessee a notice specifying the breach complained of, and if the breach is capable of remedy, requiring the lessee to remedy the breach, and in any case requiring the lessee to make compensation in money and the lessee fails to do either; but by subsection (6) certain exceptions are introduced, as the subsection provides that the section should not apply to a covenant or condition against "assigning, underletting, parting with the possession or disposing of the land leased" and the Court held that a covenant not to share the possession was not within the exceptions contained in subsection (6), and therefore as the plaintiff had not given notice of the breach and complied with section 14, the action for possession at the present time was not enforce able and the action must be dismissed.

Specific Performance.

In our Legal Section last month we referred to a case where specific performance was granted although the engrossment had not been signed, as the engrossment, coupled with a letter, was held a sufficient memorandum to satisfy the Statute of Frauds, but we may now refer to a case, Allsopp *v.* Orchard (1923, 1 Ch. 323) where letters were held not to express the contract which was being sought to be enforced. The plaintiff was rector of a parish, and as his stipend as rector was inadequate to maintain the house, he desired, if he could obtain the necessary consents, to sell the rectory house and premises standing on some 2½ acres of land and some 88 acres of glebe, retaining 3 acres on which to erect a smaller rectory. He communicated his intention to the defendant, explaining that he could not obtain the consent of the Bishop unless he already had an offer. He further informed the defendant that a bath and some fixtures would have to be taken over, and when asked as to the boundaries of the portion of the premises he desired to reserve, he said that could be arranged later. The defendant made an offer of £3,000, but subsequently, on being informed that the Bishop did not consider this adequate, he increased it to £4,000. These offers were made before a valuation had been made, but the property was subsequently inspected and valued by Messrs. Clutton, who reported to the plaintiff's solicitors, Messrs. Cowlard, Grylls & Cowlard, and they wrote to the defendant the first of three letters relied upon by the plaintiff in this action. This letter was dated March 10, 1921, and was as follows: "We are acting for the rector, who proposes to sell the rectory and glebe subject to the necessary consents to be obtained. The property has been valued by Messrs. Clutton, and as we understand that you would like to have the opportunity of purchasing privately, we suggest that you should make us an offer in writing, or come and see us within the next few days."

The defendant had an interview with Messrs. Cowlard the day after he received the abovg letter, and on March 14 wrote the followine letter to Messrs. Cowlard: "With regard to Jacobstow Rectory and glebe, I am prepared to give £4,500 for the property. As regards to (*sic*) fixtures, &c., no doubt we shall be able to arrange that later. I trust you will be able to manage transfer on my behalf, and oblige." The third letter was from Messrs. Cowlard, March 15, 1921: "I am obliged for your letter of 14th inst. offering £4,500 for the property, which I am authorised to accept on behalf of the rector subject to the necessary consents being obtained, and I will at once apply for these."

At the trial certain oral evidence was given and certain documents were referred to, but it is unnecessary to consider this evidence as the Court based its judgment without resort to this evidence, but on the letters and the valuation alone.

It must be remembered that the contract it was endeavoured to enforce was the purchase of the rectory and the glebe, not the property the subject of the original negotiation: that property less the 3 acres reserved. The Court found that the only subject of negotiation had been the property with this reservation, and that the first letter did not disclose the fact that an offer was invited for something different, *i.e.*, the whole property. The Court came to this conclusion on two grounds. First, in the letter of March 10, Messrs. Cowlard said, "The property has been valued by Messrs. Clutton," which clearly meant the property the subject of negotiations, and if there was any doubt about this the valuation made it clear, for the valuation was not of the rectory and glebe, but the rectory house and the glebe less three acres, and the valuation also proceeded on the footing that the rector should retain the use and occupation of the rectory house and premises for two years from the date of sale, and should have the right to lay on water for the new rectory from a pipe supplying the old house. The second point was that by his letter the defendant so understood the offer, for otherwise the mention of fixtures, &c., would be irrelevant.

Therefore the action failed as the Court held that the contract sued upon for the whole property was never intended by the parties.

This disposed of the matter, but we may mention one other matter raised at the trial. It was offered by the plaintiff to abandon all reservations and to treat the offer of £4,500 as including the whole property, and it was contended that in the face of this offer made by the vendor to his sole disadvantage the defendant could not resist an order for specific performance, but the Court held that when a defendant had established the defence that he never contracted as alleged and that there never existed a contract in the terms sued upon, it is not competent for the vendor or the Court to hold him to some contract not the subject of the action.

Patent Law.

We may refer to a point in patent law recently decided by the Court of Appeal in the case Ellis and Sons *v.* Pogson (*Weekly Notes*, June 9).

Section 36 of the Patents and Designs Act, 1907, as amended by section 20 of the Patents and Designs Act, 1919, provides that "Where any person claiming to have an interest in a patent, by circulars, advertisements or otherwise threatens any other person with any legal proceedings or liability in respect of any alleged infringement of the patent, any person aggrieved thereby may bring an action against him and may obtain an injunction against the continuance of such threats and may recover such damages (if any) as he has sustained thereby if the alleged infringement to which the threats related was not in fact an infringement of the patent. Provided that this section shall not apply if an action for infringement of the patent is commenced and prosecuted with due diligence."

The Court below held, and this has been confirmed by the Court of Appeal, that the section presupposes the existence of a patent in respect of the infringement of which legal proceedings were threatened, so that a threat by a person who has applied for a patent and whose complete specification had been accepted, but to whom a patent had not been granted and was ultimately refused, was not a threat within the meaning of the section in respect of which a remedy was provided. Apparently this finding is based upon the fact that a person cannot have an "interest in a patent" until a patent is in being. But at present the case is only reported as a headnote.

The Rent Act : Subtenants

We may note a recent case, Ward *v.* Larkins (*Weekly Notes*, June 16, 1923), on the position of subtenants under the Rent Act. Four houses in Stratford, by a lease dated March 24, 1881, had been demised to one, Carpenter, for a term of 80 years less one day from December 25, 1877, at the yearly rents of £4 4s. for each house. The lease contained covenants for the repair of the houses by Carpenter, and a proviso for re-entry in case of breach of covenant. The grantor of this lease had subsequently assigned all his interest in the reversion to the plaintiff in this action, and Carpenter had assigned all the leasehold interest to one Monckton, who was a defendant in this action. Monckton had subdemised the premises by way of mortgage, and the other defendant (Larkins) was assignee of the mortgage. Before the present proceedings were commenced the premises had been sublet on weekly tenancies, and were in the occupation of eight subtenants. The premises comprised in the lease and the parts of the same were dwelling-houses within the Rent Act.

The plaintiff had brought this action against Monckton for possession, mesne profits and damages, and against Larkin and the subtenants for possession. Monckton did not defend, and Larkin, although he put in a defence, at the trial admitted breach of covenant and did not ask for relief from forfeiture; thus there was no defence except on the part of the subtenants, and they claimed the protection of the Rent Act. The plaintiff relied upon Chapman *v.* Hughes (see *The Builder*, May 4, 1923), whilst the defendant cited Cottell *v.* Baker (*The Builder*, March 26, 1920).

The Court distinguished Chapman *v.* Hughes, as there the subtenancy had not only been created by an act in breach of covenant, but the subtenant had been privy to that breach, whilst in this case there was no breach of covenant at all in subletting; and the Court held, having regard to section 5, subsection (5), of the Act, and section 15, subsection (3), an order for possession as against the subtenants would not be justified.

It will be remembered that section 5, subsection (5), provides that an order or judgment against a tenant for possession shall not affect the right of any subtenant to whom the premises or any part thereof have been lawfully sublet, before proceedings for recovery of possession or ejectment were commenced. to retain possession, whilst section 15, subsection (3) provides that where such an order for possession or ejectment is made the subtenant to whom the premises or any part thereof have been lawfully sublet shall subject to the provisions of the Act become the tenant of the landlord on the same terms as he would have held from the tenant had the tenancy continued. That is the effect of the judgment delivered in this case, as the subtenants would become the tenants of the plaintiff.

At the time Cottell *v.* Baker was decided the law was not the same as it is now, for the expression "lawfully sublet" which occurs in the above sections was introduced in the Act of 1920. In Cottell *v.* Baker, however, the Court held, on the authority of Wilson *v.* Rosenthal (1916, 22 T.L.R. 233) that a covenant not to underlet without consent did not apply to an underletting of part of the premises. Since the decision of the Court of Appeal in the case Terrell *v.* Chatterton (*The Builder*, July 28, 1922), now affirmed in the House of Lords (see *The Times*, June 20), it may be doubted whether the Court of Appeal would place such a narrow construction on such covenants as that adopted in Wilson *v.* Rosenthal, and followed in Cottell *v.* Baker, but a new paragraph has been inserted in the Rent Restriction Bill now before Parliament, apparently to meet the decision in Cottell *v.* Baker, which is to follow paragraph (*g*) in section 5, subsection (1). Section 5, subsection (1), lays down that orders for possession or ejectment are not to be made unless the circumstances are such as are detailed in the paragraphs which follow, and the suggested new paragraph is "unless the tenant without the consent of the landlord has at any time after July 31, 1923, assigned or sublet the whole of the dwelling house or sublet part of the dwelling house the remainder being already sublet." Since the words "lawfully sublet" have been added to sections 5 and 15 of the Act of 1920, why should not a subletting of any part of a house without the consent of the landlord, unless permission is conceded in the agreement, be made a ground for obtaining possession? As it stands the new paragraph appears to weaken the effect of the Act, and we venture to suggest that the words "the remainder being already sublet" should be omitted, thus giving the paragraph the effect we recommend.

The point is of importance, for when we come to Clause 6 of the Bill, which allows an increased rent in the case of subtenancies, the expression "lawfully sublet" is again found, and it is therefore essential that it should be clearly understood what is "lawful subletting."

HEAVY TRAFFIC AND VIBRATION.

We are glad to see that correspondents in *The Times* are again calling attention to the damage caused to buildings by the ever-increasing weight of motor or mechanical traffic on the roads. This is a question we have repeatedly drawn attention to in these columns for many years. In our issue, September 29, 1922, we noted a local inquiry was being held at Cowes as to the serious damage arising from this cause, and in our issue, February 11, 1921, we noted a case where a ceiling had fallen, and although no negligence was proved, the owner of the house—an eating house—had been held liable for injury to a customer. In the recent case, Hoare & Co., Ltd., *v.* McAlpine & Sons (*The Builder*, December 1, 1922), it was held that the private individual who introduces modern methods in preparing a site for building is liable to his neighbours if damage results from the vibration so set up, but that case depended upon the principle laid down in Rylands *v.* Fletcher (1868, L.R. 3, H.L. 330) that if a person brings material on his land or lets loose a force from his land which is dangerous in its nature, he is liable to the owners of neighbouring property That decision can hardly apply to the public roads, but it lays down a principle which, if the law as it stands does not apply to enforce, should be the subject of legislation. In Hoare's case, the learned Judge is reported as having said that it was an alarming proposition that the Court should have to consider when does an old building lose its right to protection? That is a question we have often raised, but which has not yet received an answer; but in Hoare's case the Court held that the house was in a reasonably sound condition, and there was no justification for its being shaken down in its declining years by "an adventurous and powerful neighbour." Surely the same reasoning must apply to properties near our highways. On the highways the same protection is extended to the maimed, the halt, and the blind, as to vigorous members of the public who use the highways, and it is but an extension of this principle that only such traffic shall be put upon the highways as is compatible with the safety of house property adjoining the highway, whether it be new or old so long as it is in a sound condition.

As it is, the owners of property are being rated to constitute the roads fit for traffic entirely unsuitable to roads and for maintaining them in that condition, and thus they are made to subscribe to the engine which works destruction to their own property. Legislation will have to be passed to remedy this serious state of affairs, and the sooner it is passed the better. Our roads form a strange contrast to our railways; the latter are hedged in with all kinds of legislative restrictions although the undertaking is conducted on private property; but the public roads which border private property are practically turned into tracks which could be termed "railways" were it not for the fact that the heavy traffic is not supported on rails and therefore the vibration is accentuated.

LAND FOR WATER UNDERTAKING.

Mr. Howard Martin, Official Arbitrator, sitting at the Municipal Offices, Southampton, heard a claim by Mr. Alfred Bowker, of "The Malms," Shawford, near Winchester, against the Southampton Corporation, regarding the Corporation's acquisition of 12¾ acres of land under their Water Act of 1921, for their water undertaking.

Mr. A. F. Wootten, K.C., and Mr. William Allen were counsel for claimant, while Mr. E. Charles, K.C. (instructed by Sir Richard Linthorne, Town Clerk), appeared for the Corporation.

On behalf of the claimant a valuation of £30,742 10s. was submitted, while the valuation detailed on behalf of the Corporation amounted to £1,805. Witnesses for the claimant attached considerable value to gravel in seven acres of land, but this value was disputed by witnesses for the Corporation.

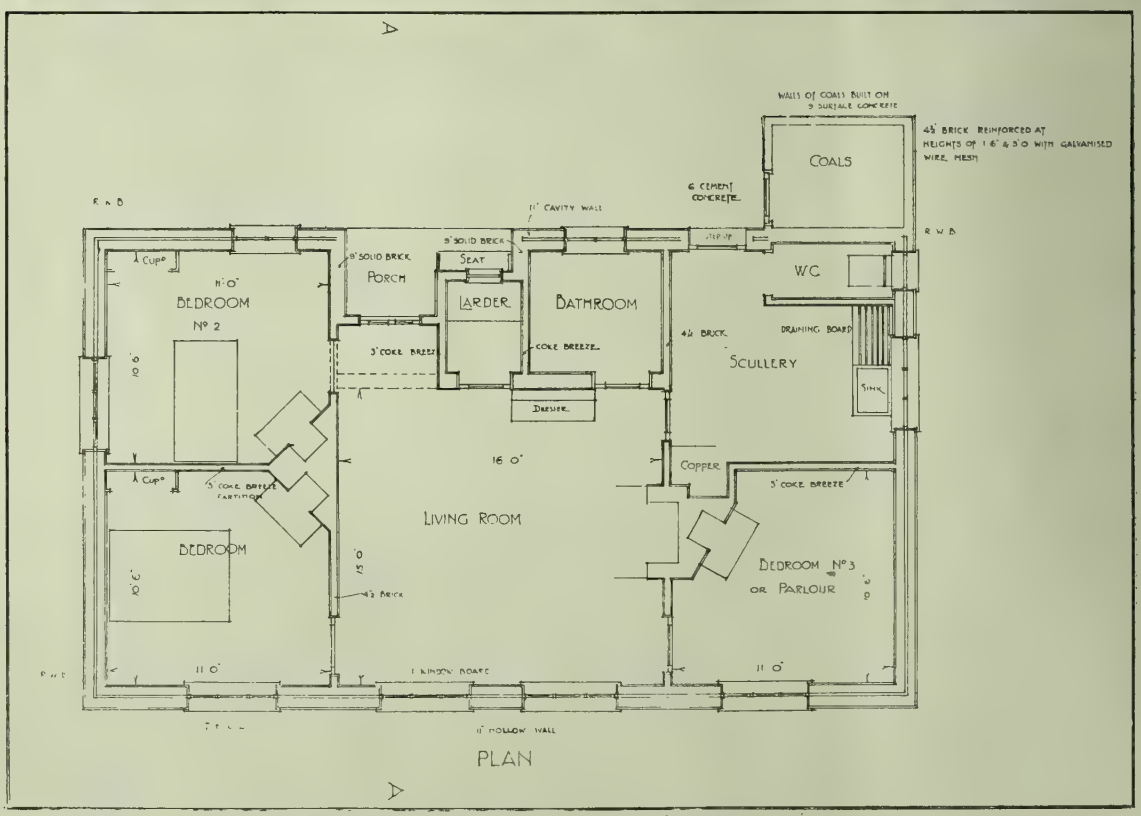
The Official Arbitrator, who reserved his decision, has since issued his award, as follows:—"That the Acquiring Authority is to pay the claimant the sum of £3.375 as compensation, and erect and maintain a suitable fence where necessary to divide the land to be acquired from the claimant's adjoining land, and I Order the Acquiring Authority to pay the stamp duty and the claimant to contribute £78 15s. towards the costs of the Acquiring Authority."

One portion of the land is subject to a statutory right of way for pedestrian and vehicular traffic for the claimant, his heirs and assigns.

Talley Abbey.

According to the *Western Mail*, persons have been digging into the remains of the two piers in the north transept of Talley Abbey, the famous Carmarthenshire monastery, and it is suggested that the Advisory Board for the Preservation of Ancient Monuments should prevent the desecration of this historic relic.

THE AUCTIONEERS' AND ESTATE AGENTS' INSTITUTE.



THE PRESIDENTIAL ADDRESS.

In the course of his Presidential address at the annual meeting of the Auctioneers' and Estate Agents' Institute, held at the Royal West of England Academy, Bristol, on July 26, Mr. George E. Kemp, J.P., said :—

The Registration Bill, promoted in co-operation with the Surveyors' Institution and the Land Agents' Society, had been launched, and little fault seemed to be found with the main principle underlying it. The responsibility of the duties specified in the Bill was great, and the public was entitled to protection against unknowingly employing an unqualified or irregular practitioner. That was, shortly, what they were aiming at; it was for the benefit of the public and for the good repute of their own honourable calling. There was no desire whatever to interfere with the legitimate work of other professions, or with those established practitioners or experienced assistants who were not members of the Societies promoting the Bill. They would be entitled to register, and, if they conducted their professional work in a clean and honourable way, they would, he believed, appreciate their proposals when they were placed upon the Statute Book and their full value began to be felt.

Although the Bill did not reach its second reading on the appointed day, and little further progress in Parliament was likely this session, the Joint Committee of the promoting Societies was not standing still. The nature and extent of the opposition had been largely disclosed. Much of it was due to misunderstanding, and it could, he believed, easily be overcome. Conferences were taking place with this object, and certain concessions had been made. The chief of those was the deletion of the sub-clause relating to connection with other business. They were satisfied that they could not successfully ask Parliament to take away part of a man's living if such a man now obtained his living partly by the work of their profession and partly by connection with other business.

Bungalow, Winforton. Mr. M. Waterhouse, Architect.

[The cottage illustrated adjoins a private laboratory and was recently erected at Winforton, Herefordshire, for Mr. T. R. Merton. The cottage is for the use of the laboratory assistant. By the use of Poilite pantiles in the laboratory and the cottage a roof of lighter construction over a large span was secured. The tiles in question look like ordinary pantiles from a distance and give a pleasant appearance.]

They had to be patient and persistent, confident that it was only a question of time before Registration became the law of the land and that by their efforts they would leave the profession better than they found it, to the benefit of those who came after them

The Rent Restriction Act, although amendments would be made, was evidently to remain for a further period. Considerable modification of the Government proposals had already been made during the passage of the Bill.

Housing.

In connection with the Housing Bill, one was glad to see that a more elastic system than that originally put forward was likely to be adopted, in regard to both the class of house and the Government grant. From personal experience in his own district, he found that many people who, by thrift, saved money during the war, were purchasing new freehold houses, which private enterprise was producing ready for occupation—houses of a better type than those they had hitherto resided in. He was referring more particularly to houses of the value of about £700 or £800. In the majority of cases this action was automatically leaving smaller houses available for the class of persons for whom it was proposed to provide the so-called non-parlour house. There was, therefore, no reason why the Government grant should not apply to the better houses referred to, just as much as to a somewhat inferior class of house. In going about the urban and rural districts, one could not but deplore the appearance of some of the houses hurriedly constructed under the subsidy system. In the urban districts they had too often been expensively and indifferently built, without any pretence to artistic treatment. In the rural districts they were too often what one might describe as "shanties," prejudicially affecting the beauty of the country-side.

Town Planning and Roads.

Though dormant for some time, town planning was now coming into prominence. The systematic planning of areas was a most estimable object. In localities where there was undeveloped land belonging to different owners, one would welcome a comprehensive scheme, although such a scheme might not be capable of satisfactory application to a self-contained estate where a considered development had been in existence many years. Adjoining owners could be benefited by a comprehensive scheme, though he would submit that any town-planning scheme should not be adopted arbitrarily, but rather after genuine collaboration between the authorities, owners and their agents. It was to be feared that, in projecting a scheme of this nature, owners could not obtain full pecuniary advantage in regard to their land. With a view to meeting this point, there should be a relaxation of the existing by-laws, so as partly to relieve owners in connection with the expense of road construction and similar items. The cost of such work at present prices was a most serious matter; apart from increasing the frontage price to private builders and others, it retarded owners from even incurring the liability during a period when the confidence of the investor had not been regained.

In many large towns the by-laws provide for the construction of roads having a width of 40 ft. or more, irrespective of whether they were to be main or lateral roads. This, he assumed, was for the purpose of providing adequate air space and of preventing overcrowding. When such roads had been constructed and the houses built, the local authorities, before incurring the responsibility, under the Public Health Act or the Private Street Works Act, of taking over such roads and maintaining them for all time, called upon the individual owners of the houses to pay their proportion of the cost of making up the roads. The investor, whether occupying owner or otherwise, therefore had a very direct interest in this matter. In the case of a main road, 24 ft. was the least width of macadam that should be provided. In the case of lateral roads, however, he thought such a width of macadam far more than necessary. It not only involved individual owners in an expenditure which could well be avoided, but it involved the municipality for all time in unreasonable cost of upkeep. So long as they had a hard-and-fast line in by-laws, anomaly prevailed. It was easy to propound destructive criticism; what alternative could one put forward? Respectfully, he would suggest that, to ensure adequate light and air and to prevent the overcrowding of an area, the front elevations of houses (excluding bay windows and porches) might be 50 or even 60 ft. apart, and that the width allowed for roads and open spaces for the public use should be 40 ft., thus leaving the remainder for forecourts. Main roads might have a 24 ft. width of macadam and 8 ft. footpaths; lateral roads, say, 14 to 16 ft. of macadam, grass strips and pavements, at the discretion of the authorities. Gas, electric light and water mains could then be placed outside the macadam and so prevent what they now so often saw—the disturbance of the roadway itself when these had to be dealt with.

Schedule "A" Assessments.

An increase in assessment in many cases must be anticipated and could be justified. It was not outside the range of probability, however, that these assessments for Schedule "A" would govern local assessments. While this might lead to a reduction in rates, and, in the long run, be a benefit to all, one must not lose sight of the possibilities. Some authorities might consider this only in the light of increased revenue, and might be induced to make increased expenditure, with a consequent diminution of the benefits that would otherwise accrue from increased assessments. The pressure of public opinion might, however, be strong enough to combat this. Many of the blue forms were already in their hands, and a good number were capable of easy adjustment with the Inspectors of Taxes without having to go before the Commissioners. One was rather at a loss, however, to understand the incongruities apparent when one had the opportunity of comparing several similar cases which come into one's hands. As a modest practitioner, he might be permitted to say that an assessment based upon the 40 per cent. increase allowed by the Rent Restriction Act must be open to objection if, of that 40 per cent., the 25 per cent. allowed by the Act (in addition to the one-sixth pre-war allowance) to cover the enhanced cost of repairs, was not eliminated in arriving at the net assessment.

THE WEEK IN PARLIAMENT.

WESTMINSTER, *Wednesday.*

Housing Bill.

THE Housing Bill has been read the third time in the House of Lords.

Insanitary Houses.

Replying to a query by Mr. T. Thomson as to the number of local authorities taking action under the Health and Housing Acts in respect of insanitary houses in 1921, Mr. N. Chamberlain gave the following figures: Local authorities who submitted reports, 1,665; local authorities who reported action under the Health and Housing Acts, 1,364; houses in respect of which closing orders were made, 2,291; houses in respect of which closing orders became operative following declaration of owners after action under Section 28, Housing Act, 1919, 623.

A New Scheme.

Mr. R. Richardson asked the Minister of Health whether he had received a suggestion that local authorities should be encouraged to purchase land for housing purposes; that each plot might be offered free or for a nominal rent to any person, other than a speculative builder, for the purpose of building a house thereon; that the plot should remain the property of the local authority and not be transferable; and that each person given the offer of a plot should undertake to build a house within a certain time limit or forfeit the use of the land; and whether any action had or could be taken to promote house building on such lines?

Mr. N. Chamberlain said he had received from time to time suggestions on the lines indicated. He saw no particular advantage in the suggestion of a reduction of ground rent, which was not, in fact, contemplated in the Housing Bill now before Parliament. A local authority could, however, purchase land and after development lease the plots to persons intending to build houses thereon, and, subject to such conditions as might be laid down, assistance might be given to the intending occupier in the shape of a lump sum contribution to the cost of the house. Further assistance by way of loan might be given under Clause 5 of the Bill.

Rents.

Mr. N. Chamberlain informed Mr. T. Thomson that the lowest and highest rents agreed to by the Ministry for A and B type of houses were:—

A TYPE.

Lowest rent	3s. 3d. a week.
Highest rent	18s. 6d. do.

B TYPE.

Lowest rent	4s. 3d. a week.
Highest rent	21s. 6d. do.

These rents were in all cases exclusive of rates.

Houses Approved.

Mr. N. Chamberlain informed Capt. W. Benn that the number of houses approved to date which would rank for assistance under the new Bill was 16,215.

Building Costs.

Mr. N. Chamberlain informed Capt. Benn that it was estimated that, if the costs of the material in a cottage in September, 1920, were taken as 100, the present costs would be put at 58.

The Rent Bill.

Mr. T. Thomson asked the Minister of Health whether, in view of the complicated form in which the amendments of the existing Rent and Mortgage Interest Restrictions Act had been made, he would publish, as soon as possible, for the guidance of the public, a simple statement of the chief alterations which would come into force next month.

Mr. N. Chamberlain said he proposed, when the Rent Bill had been passed, to reprint the Act of 1920 with the amendments made by the new Act.

Housing in Durham.

Mr. N. Chamberlain informed Mr. Herriotts that, under the State Assisted Housing Scheme of 1919, local authorities in the County of Durham completed the following numbers of houses: 1919, nil; 1920, 44; 1921, 1,591; 1922, 4,381; 1923 (up to July 1), 690; total, 6,706. In addition, a further 655 houses, which had been authorised, were either under construction or had not been commenced on July 1. The number of houses in respect of which applications had been received from local authorities in the county under the provisions of the new Bill was 1,447.

Westminster Hall.

Sir H. Brittain asked the First Commissioner of Works whether, following the recent successful renovation of Westminster Hall, he would consider the desirability of installing a more effective system of artificial lighting which would display the beauties of its unique and historic roof?

Sir J. Baird said he thought they must have further experience of the new lighting arrangements before considering any change, involving considerable expense.

THE BUILDING TRADE.

SOME COMMON DIFFICULTIES IN PAINTERS' WORK.

By CHARLES P. SHARP and L. F. J. TUBB.

Broadly speaking, the term "painting," as generally accepted for everyday use, may be said to be divisible into two classes—(*a*) the application of paints of oil media and varnishes; and (*b*) the application of paints of water or tempera media and distempers. In either case, the durability, *i.e.*, the protective quality, of the paint depends upon the chemical composition, the physical condition, the method of application, and the nature of the surface treated. Thus, if difficulties arise, they must be due to one or more of the causes classified below:—

1. Difficulties due to the surfaces to which paint is applied.
2. Difficulties due to the pigments composing the paint.
3. Difficulties due to incidental causes.

Difficulties arising from the surface to which the paint is to be applied most frequently occur, and will be discussed under the headings of (*a*) external surfaces, and (*b*) internal and miscellaneous surfaces.

In the category of painting on metals must be included iron (cast, wrought and galvanised), steel, copper and aluminium. There has been much controversy in trade journals and elsewhere as to what pigment offers the greatest protection from corrosion to ironwork; but red lead is still to be regarded as the best paint for this purpose. Owing to the "spongy" nature of iron, the best time to apply the primer is while the metal is still warm from the casting, the advantages being that, firstly, the metal has not been able to absorb any moisture; and, secondly, the pores or interstices, will, owing to the higher temperature, be larger, thus giving the paint a greater chance of sinking in. The metal on cooling contracts and holds the paint to the surface more efficiently. As a low drying paint will ultimately bring oxygen into contact with the iron through slow oxidation, a quick drying colour is to be recommended. For this reason, boiled linseed oil is preferable to raw, because in the process of boiling a certain amount of drying agents are added which accelerate the drying. Other efficient materials are graphite compositions, aluminium paint, and animal blacks, which have a good effect upon the iron because of their greasy nature; these are chiefly proprietary articles, sold under the title of anti-corrosive paints.

The painting of galvanised iron with oil paint generally yields unsatisfactory results when a short time has elapsed after its application. This is due to the paint peeling off through lack of adhesion. The remedy is to give the iron two coats of water paint, which, acting in the same way as claircolle, provides a key for the oil paint. Copper should be treated in the same way as galvanised iron.

Aluminium, like zinc and galvanised iron, is very greasy, and requires special preparation before painting. This may be done by washing with benzine, and then going over the surface with fine emery cloth or glass paper, to provide a key for the paint. Alternatively, a coat of Japan goldsize may be applied as a primer, followed by a coat of paint made up with varnish and turpentine, which may be varnished if required. Priming paint of white lead should not be used direct upon aluminium, as the two metals (lead and aluminium), form a combination which leads to the breaking-up of the paint in the form of a powder. White lead, 2 Pb. C.O. 3 Pb. (O.H.) 2, being a hydroxide, and as hydroxides react with aluminium, the 2 Pb. C.O. 3 Pb. (O.H.) 2 will react with the metal, forming, possibly, lead aluminate, hence the "powdering."

Cement should not be painted in summer months within two months of being rendered, or four months in winter; and even then it should be specially treated before applying oil paint. For this a solution of zinc sulphate (Zn. S.O. 4), of one part zinc to five parts water, should be applied after a spell of dry weather. The zinc sulphate reacting with the calcium compounds of the cement, forms calcium sulphate, which fills the pores of the cement.

Paint on stone does not act as a true preservative in the actual sense of the word. For enriched masonry, a coat of raw linseed oil, alone, will harden it and enable it to withstand the elements; for large stone surfaces, oily coats of red and white lead are satisfactory, and for exposed seaside surfaces a mixture of Zn.O.—zinc oxide—and white lead will stand the weather and prevent chalking. Under certain conditions zinc oxide has a tendency to crack, owing to its extreme hardness, and the admixture of pigments recommended is on the principle of correcting the defects of each material by the addition of the other. For brickwork an oily coat is to be recommended, or, if preferred, a coat of petrifying liquid—sodium silicate—to prevent undue absorption.

It is undesirable to paint on pithy or sappy wood; if this occurs only in small patches it may be treated the same as knots. But if in large areas two coats of water paint may be applied; this will absorb the moisture from the wood, and will provide a good ground for subsequent painting. When paint is applied over timber which has been previously creosoted, it turns yellow and does not dry, the creosote working through the paint preventing it from drying. The only cure or prevention seems to be the application of two generous coats of patent knotting or water paint on the timber, which will keep the creosote back and may be painted in the usual way.

It is inadvisable to apply paint to a damp wall as, even if the surface is dry, should the wall contain moisture, this moisture will not consent to be trapped, but will, when heated, expand or vaporise, causing blisters. If the moisture is on the surface as well as in the wall it will, in the process of painting, become mixed with the paint and again blisters are the sure outcome. Should the damp come from the exterior surface, the latter should be given a coat of waterproof solution, consisting of one of the following: (*a*) a hot mixture of linseed oil, resin, and tallow; (*b*) the application of a coat of strong soap jelly, followed by a coat of strong alum size; (*c*) two coats of petrifying liquid (sodium silicate); (*d*) two coats of water paint; the last, thinned with petrifying liquid, is probably the most efficient.

Having made the outside watertight, light fires inside and draw the moisture completely from the wall and apply a thin and penetrative coat of oil paint. If the damp rises from the ground it is due to the inefficiency or absence of a damp-proof course; the cure is obvious. Damp is sometimes caused through the lack of ventilation where cavity walls are used; a few air-bricks used judiciously should obviate this difficulty, and the present damp may be got rid of as before. Water paints and distempers are apt to peel off from patent plasters, unless a first coat of sharp oil colour is applied as soon as the plaster is hard enough to stand the brush, probably within a day of setting.

The cracking of painted surfaces is due to a large amount of difference in the expansion and contraction between the top coat of paint and the one beneath; as, for instance, flatting on hard, glossy varnish colour. If, however, it is necessary to apply flatting to a coat of varnish colour, it can be done with little fear of cracking if it is applied soon after the paint has set, but not after it is thoroughly dry. Actually, cracking can be almost entirely obviated by providing a good key, in this case obtained by covering an undercoat which is still tacky. Cracking can also happen between varnishes of different expansions.

Blistering is the consequence of trapped moisture either in the wood, plaster or stone or between subsequent coats of paint; no coat of paint can withstand the force of expanding moisture, so that when the surface becomes heated, room must be found for the steam that is formed; a coat of water paint will, if the moisture is not excessive, absorb it when the heat draws it towards the surface.

For such materials as paper, beaver board, uralite, and textiles, where unequal or excessive suction is liable to occur, a good preliminary coat is size, which will correct any tendencies in this direction. If oil paint is used upon textiles without such a preliminary coat, the textiles will absorb the oil, thus leaving little or no binder for the pigment, while the oil will create a form of slow combustion between itself and the material which will act upon the fibre and cause it to perish and fall to pieces.

A BUILDING TRADE STOPPAGE AVERTED.

The following are the terms of the agreement reached between the Liverpool, Birkenhead and Wirral Districts Building and Allied Trades Employers' Association and the National Federation of Building Trade Operatives, comprising joiners, machinists, painters, bricklayers, masons, slaters, plasterers, plumbers, and labourers, dated Friday, July 20, 1923:—

1. That the wages as and from the commencement of work on Monday, July 23, 1923, shall be as follows: (*a*) Bricklayers, masons, slaters and plasterers to remain the same as at present; (*b*) joiners, machinists, painters, and labourers, ½d. per hour reduction on the present rates; (*c*) plumbers, 1d. per hour reduction on the present rates.
2. In all other respects the existing rules to remain as at present.
3. This agreement to last until April 30, 1924, subject to six months' notice in accordance with the rules.

YORK DISPUTE SETTLED.

The dispute in the building trade at York has been settled, the men at a mass meeting held in the Co-operative Hall deciding to accept the employers' offer that York be graded A1 as and from November 1, 1923, with Grade A as and from January 1, 1924.—Mr. R. Smith, chairman of the York branch of the National Federation of Building Trade Operatives, presided, and there were also present Mr. C. Rickard, of the A.U.B.T.W.; Councillor J. Noon, Yorkshire Regional Secretary of the Federation; and Mr. J. Hutchinson, the Secretary of the York branch.—A vote was taken on the second of the employers' offers, which was accepted. The other offer of the employers was for joint application being made for York to become Grade A as and from January 1, 1924.

An appeal was made from the platform to the men to return to work immediately.

L.C.C. SCHOOL OF BUILDING, BRIXTON.

MEMORIAL TO THE FIRST PRINCIPAL.

On the 17th inst. a memorial to the first Principal of the School of Building, Mr. H. W. Richards, who died in November, 1921, was unveiled by the Rev. Canon R. D. Swallow, M.A., Chairman of the Higher Education Sub-Committee, supported by Mr. H. D. Searles-Wood, F.R.I.B.A., Chairman of the Advisory Committee; Mr. J. C. Smail, O.B.E., Assistant Education Officer, L.C.C.; Mr. Hugh Davies, of the Board of Education; Prof. A. Beresford Pite, M.A., F.R.I.B.A.; Mr. A. Sage, O.B.E., Principal of the School of Building; and Messrs. W. L. Bragg, W. Davis, G. Hicks, G. E. King, V. T. Sulston, and S. W. Wilson, members of the Advisory Committee. After conducting the usual morning service and prayers, Canon R. D. Swallow addressed some 300 of the staff and scholars, and dwelt upon the zeal of the late Principal in the cause of technical education, and the valuable part he had played, not only by his organising ability and enthusiasm in imparting knowledge of the art and science of building work, but also in helping to build the characters and careers of the students under his charge. He pointed out that the school, built up from such small beginnings by Mr. Richards, was a monument and memorial itself to the late Principal's energy and capability, and that a great testimony of the success he had achieved was to be found in the number of visitors interested in building work, who came not only from the provinces, but from all parts of the world, to see the activities of the school. The memorial, in which the bronze plaque is set, was designed by Professor A. Beresford Pite, M.A., F.R.I.B.A., and is the result of the combined work of the craftsmen of the school. It carries an added interest owing to the fact that every section of the varied branches of instruction in building and decorating is represented. The medallion was modelled by Mr. J. A. Stevenson, A.R.C.A.

BOOK REVIEWS.

Practical Joinery and Carpentry. By R. Greenhalgh, First Class Honours in Carpentry and Joinery and Practical Geometry; late Chief Lecturer in Building, Halifax Technical College. With 486 illustrations. (London: George Routledge & Sons, Ltd.; New York: E. P. Dutton & Co). Price 6s. net.

A special feature of Mr. R. Greenhalgh's book on joinery and carpentry is the inclusion of illustrations of wood-working machines drawn in simple outline. These have the merit of really conveying an idea of the function and possibilities of the machines in a way that is almost impossible when illustrations are prepared by the use of photographic blocks, since the camera seems to take a perverse delight in concentrating attention upon the inessential and leaving the working parts confused in fog. The description of these machines and the method of using them is also clear and opens up to the reader a knowledge of modern workshop practice that is otherwise very difficult to obtain except by experience.

The usual hand tools, their purposes, and method of use are described in the first four chapters of the book, and some excellent hints on the care and sharpening of tools are given in Chapter 5. Processes of setting out and making the ordinary joints are made clear not only from the draughtsman's point of view, but in reference to the stages gone through in the workshop and this application of the craftsman's point of view is consistent throughout the book. Under the heading "Drawing and Setting Out," specimen rods are illustrated and a printed form of material sheet as used in large workshops for ordering stuff for any given job from the sawmill.

In a chapter on roofs, instructions are given for the graphic determination of bevels of roof timbers, and for finding them by an alternative method involving the use of the steel square. This chapter ends with the remark, "the application of the steel square to roof-trusses, framing and partitions is chiefly a matter of common sense." If this is so, the very prevalent method of setting out roof timbers by trial full size on the building may be regarded either as a confession of a lack of common sense or as evidence that where valuable material is liable to be wasted by a mistaken cut it is best to know how things are going to fit by actual experience. It happened to a carpenter setting out bevels with a steel square that he concentrated so intently on obtaining the correct levels as absent-mindedly to select the wrong timber and cut and spoil a piece reserved for the wall plate when he intended to prepare a rafter.

Gauging and marking off one piece of stuff by another are recognised in the earlier chapters as the correct methods for the joiner, and it can hardly be wondered at if the carpenter sometimes prefers them to the more abstruse, if universally applicable, rules derived from the study of mathematics. The science of handrailing, which demands the application of geometrical rule, is allotted a chapter to itself, where the tangent method of setting out a wreath is very clearly explained by means of working diagrams and some sketches illustrating the nature of the problem.

It is a curious commentary on our present-day outlook that there is no suggestion anywhere in the book that beauty of design could possibly concern the joiner, and in illustration of this indifference one might point to the moulding shown on page 57, and to the stereotyped shop front on page 215. One would like to make an urgent plea that experts, such as the author, should instil it into their students that there is such a thing as beauty, that it requires study, and that it cannot be found in the blind acceptance of meaningless Victorian "ornament." The days are over when it could be said with impunity that construction was all that mattered, and that senseless applied "ornament" could be added as a sop to those who thought that everyday things might be pleasing to the eye. Ugliness is becoming no longer a virtue nor even a matter of indifference.

Accepting the book with this reservation, one can only compliment the author upon his clear and lucid style and excellent illustrations. He might with advantage have insisted somewhat more strongly upon the precautions that should be taken to guard against dry-rot, more especially in connection with the solid floor, shown on page 170. Practical advice is always helpful, and it is to be hoped that Mr. Greenhalgh's readers will take to heart the recommendation to avoid hammering screws nearly home; not only is this a common practice, but the writer has heard it excused by an offender on the plea that it was the usual custom. The sections devoted to geometry and setting out are clear and concise, but it may be doubted whether the author is justified in his contention that an approximate ellipse made up of segments of circles cannot usually be detected from a true ellipse. While it is probably a fact that few people could at once say what was the matter, yet it must not be forgotten that every circle seen in perspective is a true ellipse and the eye is unconsciously accustomed to this form, hence a sham ellipse always has an unsatisfactory appearance.

The book can confidently be recommended to the apprentice carpenter and joiner, and also to the architectural student, but we should like to feel that the student of joinery was being taught the difference between good and bad proportion and design, as well as how to set about efficient construction.

A First Course in Building Construction (formerly entitled "First Stage Building Construction"). By Brysson Cunningham, D.Sc., B.E., F.R.S.E., M.Inst.C.E. (London: University Tutorial Press, Ltd.) Price 4s. 6d. net.

This book on the elements of modern building construction possesses the very great advantage of containing much information in small space, since it can be carried in one's jacket pocket and referred to by the student during visits to works in progress. It is only in this way that the connection of theory and practice is ever likely to be clearly understood in time for the knowledge to be made use of in the first days of office life. The book also is as definite in its statement as it is concise, and will form a trustworthy guide to the normal methods of procedure in building.

Beginning with a chapter upon drawing instruments, the preparation of drawings, their reproduction, and the simple rules of mensuration the book proceeds with a description of the common tools used by the workers in the different trades. The line diagrams illustrating these are models of precision and economy of line, and students of building construction would do well to practise the style for their own "shorthand" sketches. Shading is omitted, but the objects are drawn with such fidelity in perspective that the main lines are comprehended without the slightest difficulty. Though not all up to the same high standard, the diagrams throughout the book are admirably descriptive of the various points at issue. An exception to this rule is to be seen on page 130, where the figure illustrative of "fox wedging" fails to indicate the saw cuts in the tenon which are essential to the formation of the joint and where the wedges are shown much too far from the edges of the wood.

A valuable feature of the book is the inclusion of a series of questions at the end of each chapter on the work that has been described in it. Some of these are actually reprints from examination questions and contain sketches showing incorrect or unusual methods which the reader is required to correct. The exercise should bring home to the student's mind the structural and mechanical principles underlying sound building construction.

A Fair Wage, being Reflections on the Minimum Wage and some Economic Problems of To-day. By Edward Batten, M.I.M.E., etc. (London: Sir Isaac Pitman & Sons, 1923.) 2s. 6d. net.

The author states in his foreword that the matter contained in this little volume originally appeared as articles in a contemporary, but that they have been revised and are now presented in a more "coherent form." The author claims a thoughtful reading and adds, "because a general agreement with what he has written would be one new in time, true in fact, and potent for Industrial Peace." We are not quite certain what this means, but we can say that he should be accorded a thoughtful reading, for his pages are worth perusal, and we gather that the author is no extremist, and therefore his views are the more entitled to consideration. Agreement can also be given to many of the general principles that he enunciates, but it may be doubted if his conclusions are decisive or that they solve any great problem, but his style is clear and pungent and his pages are interesting, and his readers will form their own opinions.

The author accepts the fact that a minimum wage must be conceded, but we doubt if he sufficiently deals with this question apart from profits. In Chapter IX he combats the fact that wages are part of the cost of production. This is summarised in the Contents as "It is a fundamental necessity to obtain general acceptance of the truth that wages form no part of the cost of production," and this statement somewhat startled us, but on perusal of the text we find that this is qualified in two ways: first, it is limited by applying it only as regards the community; and, secondly—and this is the most important qualification—the author treats the minimum wage, which he terms maintenance, as part of the cost of production, and limits the above statement to wages paid out of profits.

It is here that, we think, is the weak point in the argument. In times like the present, if a minimum wage such as is defined by the author, based on the cost of living (p. 87), is fixed, the great difficulty is to provide that minimum wage at all quite apart from the question of profits, which in such circumstances is subsidiary. Then, although he concedes output must be increased, he does not appear to us adequately to deal with the difficulty of increasing output if the population is maintained by a minimum wage on the scale he accepts. Human nature being what it is, it is the few and not the many who will strive to improve their condition by increased exertion, and in times of bad trade the minimum wage may also prevent the increase of capital which the author recognises is necessary if progress is to be maintained, and thus a double deadlock may result, hindering increased capital and increased output.

To meet foreign competition and to produce goods that will find a market is the first essential to a country situated as ours is, and the burdens laid upon industry make this increasingly difficult, and the problem is not as to sharing any profits that may be made, but how to carry on in times of depression when profits are small if not non-existent.

When he comes to profits, we see the author advocates councils on which employers, workmen, and the community are represented—the latter with a preponderating voice—to determine what are fair wages. A suggestion difficult to accept as practicable.

The author refers to the coal dispute and settlement, and illustrates his views by a criticism of that settlement. We gather he advocates a pool for the miners of profits from the whole industry, whilst the investors' profit would depend on the profits of their own mines. Even conceding this debatable point, it may be doubted whether the author's suggestions would meet the difficulty.

The author has produced a very interesting little volume, but we cannot think he has solved the immediate problems "potent for industrial peace."

CONFERENCES ON HOUSING.

Bristol.

Housing Conferences are being held in different parts of the country under the auspices of the National Housing and Town-Planning Council. On July 17 one of these gatherings was held at the Council House, Bristol, representatives of local authorities in Gloucester, Somerset and Wilts being present.

The Conference was welcomed by the Lord Mayor, Mr. Alfred Dowling, himself the head of a local building firm, who said the subject of housing was always with them. In Bristol their pressing needs had been accentuated in recent years because of the lack of building in the city. They would defeat their own purpose if they moved faster than they could provide labour to build the houses, and would not be decreasing the cost but increasing it. If they went on with the things they were able to do they would be helping nationally much more than if they bit off more than they could digest.—Mr. E. W. Savory, Chairman of the Bristol Housing Committee, who presided, said that to-day building costs were very materially reduced, but the greatest hindrance to their work was the great scarcity of labour available for it. In Bristol there were definite signs that the builders were going to co-operate with regard to houses built by the Corporation; they had obtained very favourable contracts, but the thing would proceed slowly. When they came to the reconstruction of slum areas they had a far more difficult problem, because it was farther than ever from an economic possibility, and under no circumstances would it be touched except by the local authorities.

Mr. H. R. Aldridge, the secretary, said he thought that 70 per cent. of the houses under the Bill would be built under schemes of local authorities, for the chief reason that most of the people who might be induced to come under the private subsidy were absorbed in other work of a more remunerative character. Regarding prices, he thought they should not take an over-sanguine estimate built on the too cheap house, but should take the normal cost. Mr. Aldridge dealt with the questions of owner-occupier, the remission of rates, and a lump sum subsidy, the latter of which he said he regarded as a dangerous method; he favoured loans enabling men to become owners of their own houses, through building, friendly, co-operative or public utility societies.—During the discussion which followed, Mr. Harrison (Cirencester) expressed the opinion that the houses would only be obtained through the local authorities, and not by private enterprise, particularly in the rural areas.

A resolution was passed urging that greater help be given in the case of urban areas for great housing needs and small rateable values, and rural areas in which only low rates could be obtained.

Mr. Aldridge said he thought Parliament had lamentably failed to deal with the question of building rings and trusts, and he believed it would continue to fail. There was one hope that the local authorities, more directly concerned than they had ever been, might be able to exercise far greater power collectively with other buyers than was exercised in the past. Local authorities, taking concerted action might be able to do some good.

Slum Clearance.

Dealing with the question of slum clearance, Mr. Aldridge said the proposal was for the Government to pay half of the annual loss, and they had the assurance that this clause in the Bill applied to rural areas. He appealed to every urban and every rural authority to get a clearance and rehousing scheme under way. Of the two problems the slum problem was the more urgent. Even if people were willing to go on living in a slum house they should be prevented as soon as other accommodation was offered, and the slum house should be pulled down. There were nearly a million houses that ought to be dealt with in that way.

The Chairman mentioned that Bristol had adopted the provision of clearing houses, with the reservation that those houses would be kept vacant rather than be let to anyone but slum-dwellers, by whom they would be used as slums were demolished. The Medical Officer for Somerset, Dr. W. G. Savage, welcomed the assurance that this part of the Bill applied to rural areas, but he regarded it as almost a dead letter in rural areas. He estimated that there were 7,000 houses unfit for habitation in Somerset. Inability to pay a higher rent was not always the reason for living in unfit houses.

On the matter of town-planning, Mr. Aldridge said there was a reactionary move in some parts of the country and the numbers of houses to the area were being increased. From the point of view of cost there was nothing in the argument in favour of increasing the number of houses from 12 to 20 to the acre, as the cost only worked out at 2½d. per week less. The Chairman said they should take a long view and try to visualise at the moment the effect of their work in 50 years' time.

Cardiff.

Many representatives of local authorities in South Wales attended a conference at Cardiff last week, under the auspices of the National Housing and Town-Planning Council, and the Welsh Housing and Development Association, to consider the administration of the new Housing Bill (1923). Mr. A. J. Howell, Chairman of the Cardiff Housing Committee, presided.

Mr. Aldridge said no houses could be built under the new Housing Bill without a loss, and the Government now said definitely that the grant would be £6 for 20 years. The hope of a local authority carrying through a housing scheme without placing a burden on the rates, was a futile one. He could not hope to see the type of house they wanted erected for less than £450 each.

Reviewing the position in the Rhondda Valley, Sir Walter Nicholas said there was sore need for 3,000 houses without delay. At £400 apiece, that number would cost £1,200,000, whilst the proposed Government grant would be equal to but £225,000. According to Mr. Chamberlain's proposal, the local authority would contribute a similar sum, which would bring the grants from the public purse up to £450,000. Deducting that sum out of £1,200,000 they got the figure of £750,000, which was the economic value of the houses. The Rhondda local authority would have to borrow £225,000 for 20 years, and that would involve an annual payment out of the rates of £18,000 to meet repayment and interest. The income from 3,000 houses at a rental of 7s. per week, exclusive of rates, would be £54,000 per annum, less 25 per cent. for repairs, £13,650, which, in his opinion, would be totally inadequate, leaving a net revenue of £40,950. Eventually, after allowing for interest and sinking fund, the Council would only have a margin of £1,450 with which to meet contingencies, such as damages due to subsidences, loss of rents owing to industrial stoppages, reduction of rents, owing to the situation becoming more economic, and furthermore there would be practically nothing to meet the heavy new charge of £18,000 a year which the authority would have to bear for the first 20 years.

Wrought Iron Balustrading and Newel Lights: Victory Hotel, London.

[This work was recently executed by the Bostwick Gate & Shutter Co., Ltd., at their metal works, Hythe-road, Willesden, London, N.W.]

NEW BUILDINGS IN LONDON.

Bloomsbury.—Alterations.—Messrs. L. & W. Whitehead, Ltd., of Portland Works, 2, Portland-place North, Clapham-road, S.W.8, are converting store rooms of basement at the Palace Hotel, Bloomsbury-street, into a ballroom. Sub-Contractors :—Wood block flooring, Mr. Joseph F. Ebner; plastering and plaster decoration, G. & A. Brown; heating, Haywards, Ltd.; marble mosaic paving, Bryon & Co.; copper glazing, Luxfer Co.; electrical work, Duncan, Watson & Co. The architects are Messrs. Bomer & Gibbs, of 14, Riding House-street, W.1.

East Ham.—New Houses, &c.—Plans passed by B.C.: Eight houses, Boston-road, for Seymour Construction Co.; two houses, Caulfield-road, for J. T. Line; detached house, corner of Aldersbrook and Merlin roads, for E. G. Wilks; addition to 446, Barking-road, for W. H. & G. F. Mitchell; alterations to 39, High-street North, for Messrs. Dean, Ltd,; addition to 257, High Street North, for S. Strykowski; alterations to "White Hart" hotel, Green-street, for Messrs. Davies & Bailey; alterations to 25-29, Wakefield-street, for G. J. A. Baker; alterations to 920, Romford-road, for F. C. Rogers.

Oxford-street.—Rebuilding.—A new building is being erected at 40-42, Oxford-street by Messrs. Townsend & Pearson, Ltd., of 81, Dean-street, W.1, under the supervision of Messrs. R. H. Kerr & Son, architects, Grafton House, 2 and 3, Golden-square, W.1. The front elevation is in Portland stone, and the sub-contract for this has been placed with The United Stone Firms, Ltd. The floors are concrete throughout. The steelwork is being supplied by Messrs. H. Young & Co., Ltd., 4-6, Wandsworth-road, Vauxhall Cross, S.W. The other sub-contractors have not been definitely decided.—Alterations.—The contract for extensive alterations, &c., to No. 451, Oxford-street, for Messrs. Barclays Bank, Ltd., has been secured by O. P. Drever & Son (Kettering) Ltd., 141, New Bond-street, W.1. The only sub-contract so far placed is to Messrs. Fenning & Co., Ltd., for granite front; the new mahogany bank fittings, counters, &c., will be made by Messrs. Drevers at their own joinery works. The architects are Messrs. C. J. Dawson, Son, & Allardyce, of Clock House Chambers, Barking.

Regent-street.—Building.—A new building is now being erected at 203, Regent-street, W.1, The sub-contractors so far settled are: Asphalt work, Engert & Rolfe, Ltd.; steel construction, Matt. T. Shaw & Co., Ltd.; Portland stone elevation, The United Stone Firms, Ltd.; steel windows, R. E. Pearce & Co., Ltd.; fire escape staircase, Geo. Wright, Ltd.; carving, Mr. W. C. H. King; pavement lights, Geo. Wright & Co., Ltd.; heating and hot water installations, Mumford, Bailey & Preston, Ltd.; general contractors, O. P. Drever & Son (Kettering), Ltd.

Becontree Estate.—Housing.—The L.C.C. is understood to be considering the erection of a further 3,400 houses on the Becontree Estate, near Ilford.

Stratford.—Town Hall.—The proposed extension of the Town Hall is deferred, as sanction to the expenditure has been refused owing to local unemployment.

Hampstead.—Institute.—The Garden Suburb Institute is to be enlarged at a cost of £16,000.

Lambeth Bridge.—The L.C.C. has decided to reconsider the question of rebuilding Lambeth Bridge, at the end of the year.

Hackney.—Houses.—Plans passed by B.C.: House, Grove-lane, for J. Garey & Son; factory premises, De Beauvoir-road, for G. Keetch.

Builders' Merchant's Death.

Mr. T. G. Williams, managing director of Messrs. T. G. Williams & Co., builders' merchants, Cardiff, who died suddenly, was an accomplished speaker, and past president of the Builders' Merchants' Alliance. He took a keen interest in all phases of Welsh national and religious life.

RATES OF WAGES IN THE BUILDING TRADE.

The following are the rates of wages in the building trade in England and Wales. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur :—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Bricklayers' Labourers.	Masons' Labourers.	Plasterers Labourers.
Aberdare	1/7	1/7	1/7	1/7	1/7	1/7	1/7			1/2½
Accrington	1/7	1/7	1/7	1/7	1/7	1/7	1/7			1/2½

(For rates of wages in the Building Trade in Scotland, see page 151.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING AND PAINTING.

JULY 28.—**Bognor.**—COTTAGES.—Erection and entire completion of a block of eight cottages to be erected in Gravits-lane, Bognor, for the Urban District Council. Town Surveyor, Mr. Oswald A. Bridges, Lic.R.I.B.A., at the Council Offices, Bognor. Deposit £2 2s.

JULY 28.—**Dover.**—PAINTING.—For painting and decorating work during the summer holidays at the Elementary Schools. Mr. William Boulton Smith, Borough Engineer, Maison Dieu House, Dover.

195,175.—H. B. Smith: Boxes and method of making the same.

195,188.—G. Hughes (J. G. Thomas): Window sash cord fastener.

195,233.—E. Robinson: Machine for producing wooden or like rods, dowel pins, and pegs.

195,271.—E. G. Knapman: Scaffolding.

195,280.—F. P. Jones: Manufacture of bricks.

195,305.—T. B. Colman: Revolving doors.

183,447.—Soc. Anon des Hauts Fourneaux et Fonderies de Pont-a-Mousson: Rain pipes for buildings.

* All these applications are now in the stage in which opposition to the grant of Patents upon them may be made.

PROPOSED NEW BUILDINGS & OTHER WORKS.*

IN these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations:—T.C. for Town Council; U.D.C. for Urban District Council; R.D.C for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; L.C.C. for London County Council; B.C. for Borough Council; and P.C. for Parish Council.

ABERDEEN.—The T.C. has agreed to dispose of two estates for £35,000 as a site for a proposed joint hospital. Important extensions are under consideration by the Board of Control at Kingseat Mental Hospital, including a male villa with 60 beds, £17,324; a female villa, £15,758; and a nurses' home, £6,568; making a total of £39,650.

ABERTILLERY.—The Medical Officer of Health has recommended U.D.C. to erect a special house for motor ambulance and additions to the Isolation Hospital, the latter being described as an urgent need.

ALTON.—The Council of All Saints' Church are inviting tenders for installing electric light in the building.—Over £600 is to be expended on re-seating and renovating the Assembly Rooms.—An offer by Mr. F. B. Summers to build two new wards and improve the rooms for the nursing staff at Alton Cottage Hospital, at a cost of over £2,000, has been accepted.

BAILDON.—The U.D.C. are approaching the Yorkshire Electric Power Co. to obtain a supply of electricity by mutual arrangement.

BARNOLDSWICK.—Work is about to be commenced upon a new bridge. A tender has been accepted by the Council subject to the approval of the County Council and the Ministry of Transport.

BELFAST.—As a result of a visit to Liverpool by the Housing Committee, it has been decided to proceed with the erection of concrete houses in the city.

BELFONT.—Plans passed by R.D.C.: Additions to Tughall Hall, for Mr. H. Stephenson, per Messrs. Manchlan & Weightman, architects, Newcastle.

BINGLEY.—The U.D.C. have approved plans for the lay-out of the Ferncliffe Estate, where the Bingley Housing Co., Ltd., propose erecting working-class houses. Messrs. Jones & Stocks, of Park-row, Leeds, are the architects.

BIRMINGHAM.—The Licensing Justices have agreed to alterations being carried out to the following licensed premises: "Marshal Foch," Corporation-street; Benson's Luncheon Stores, Lower Temple-street; "Eagle," Scholefield-street; "Golden Cross," Shortheath-road; "Grove" Tavern, Grove-lane, Handsworth; and "Fox and Goose," Washwood Heath-road.

BLAYDON.—The U.D.C. have received sanction to borrow £18,000 for the erection of fifty houses. Plans passed: For the Consett Iron Co., twelve houses at Chopwell for the Durham Aged Miners' Homes' Committee, and sixteen semi-detached houses at Rowland's Gill for Messrs. Stoddart & Wilkinson.

BOOTLE.—Under certain conditions the T.C. are prepared to assist builders or owners of new houses by contributing £100 per house, to be started before December 31, 1923, and finished before October, 1925.

BOSHAM.—A proposal is made to build a village hall.

BOURNE.—Plan passed by U.D.C.: Two houses in Abbey-road, for Mr. T. Hinson.

BRADFORD.—The Corporation are erecting 286 houses on the Lower Grange Estate as part of a scheme for rehousing people of the White Abbey slum area, which is to be demolished. The City Architect has been instructed to prepare plans and obtain estimates. Including these 286 houses mentioned, there are 700 houses to be erected, 50 of these being "B" type (parlour house), 50 "A2" type and 600 "A" type houses.——Housing schemes launched by the Bradford Council of Social Service have now matured. The Shuttleworth Hall Estate, of 39½ acres, at Fairweather Green, is being purchased, and 100 parlour dwellings will be erected as a start. It is hoped that ultimately a total of 400 houses may be reached.

BRISLINGTON.—Mr. Alfred Clayfield-Ireland, Brislington Hall, has left £500 towards the cost of additional church buildings in connection with the parish church.

BROMLEY.—Plans passed by R.D.C.: Twenty houses, Chelsfield-lane, for Mr. C. A. George; house, Northfields Lodge Farm, Grigg's Cross, for Mr. C. R. Smith; house, Broxbourne-road, Orpington, for Mr. L. S. Gray; bungalow, West Wickham, for Mr. P. A. Chant; house, North End-lane, Downe, for Mr. J. W. Still; alterations to Holly Cottage, Burlings-lane, Knockholt, for Mrs. Hodson; Wesleyan Chapel, St. Paul's Cray, for the Trustees; house at Leeson's Estate, for Mr. E. E. Morris; bungalow at Cudham, for Mr. George Harris; garage at The Cabin, Cudham, for Mr. V. R. J. Nightingale; alterations to house at Hayes, for Mr. S. Staples; bungalow, Dowlerville-road, for Mr. A. S. Mitchell; house at Crofton-road, Orpington, for Mr. Brian Gotti?.

BUXTON.—The T.C. has acquired, at a cost of £2,000, a part of the well-known Devonshire Hotel, Market-place, for gas workshops and offices. At one time known as the "Eagle," the hotel was famous years ago as a coaching house.

CAERPHILLY.—The U.D.C. has been recommended by M.O.H. to allow no delay in erection of public slaughterhouse, and additional Council houses at Nelson, Trecenydd and Caerphilly are advised.

CARLISLE.—Plans passed by R.D.C.: Mr. S. Stewart, architect, Botchergate, Carlisle, on behalf of Mr. G. Cullen, Whiteclosegate, for house at Houghton; by Messrs. Stead, McAlpin, Cummersdale, for two semi-detached houses at Cummersdale.

COWES.—The U.D.C. has a scheme in hand for extending the Esplanade to Gurnard, at an estimated cost of about £20,000, providing financial Government assistance can be obtained.

CHAWTON.—Sufficient funds have been collected to enable a start with the erection of the Village Hall, which has been designed by Mr. J. Coleridge, F.R.I.B.A.

CHESTERFIELD.—The Town's Football Club have decided to extend the Pavilion at an estimated cost of £400.

CROYDON.—A memorial window is to be placed in St. Paul's Presbyterian Church, in memory of Mr. MacKray, and £400 has been subscribed for this object.

DENBIGH.—The Ministry of Health has sanctioned the purchase by the North Wales Visiting Committee of Pontystrad Farm for extension of Denbigh Mental Hospital.

DEWSBURY.—The Corporation have decided to adopt the following relief scheme for the unemployed this winter: Widening of Hebble Bridge, estimated cost £7,000; improving Huddersfield-road, £12,822; levelling the playing field at Wheelwright Schools, £7,217; improvement of Church-lane, £5,508; and the provision of tennis courts at Crow Nest Park, Earlsheaton-Park and Ravensthorpe Park. Work will be provided for about 350 unemployed; full cost of same, £40,000.—A new scheme of decorations and renovations, including enlargement of the organ, is being adopted at the Leeds-road Baptist Chapel. The architect is Mr. Sharpe, of Halifax-road, Dewsbury.

DOUGLAS.—After a long debate on the proposals by the Isle of Man Harbour Commissioners for the improvement of the accommodation on Victoria Pier, Douglas, the Tynwald Court has resolved to erect on the south side of the pier a shelter for passengers similar to that already provided on the north side of the pier.

DOVER.—An offer to build and maintain for two years at his own cost an adult dental clinic has been made to the Corporation by Major Astor, M.P.

DRIGLINGTON.—Plans have been passed for a house at Moorside for Mr. Thomas Riley.

EBBW VALE.—The Ebbw Vale U.D.C. is to erect new footbridge over railway at south end of Bailey Estate. Plans have been passed for erection, at estimated cost £625, of house, by the Council, at cemetery for the sexton, and it has been decided to put work in hand immediately.

EDINBURGH.—Petitions granted by Dean of Guild Court: Mr. John Kyles, six semi-detached villas at Belgrave-road, Corstorphine; Miss J. R. Morris, two houses and shop, Northfield-road; Dr. F. Dittmar, villa, Barnton-avenue, Davidson's Mains; Mr. Alexander Morrison, bungalow, Barony-terrace, Corstorphine; Colonel Lelean, villa, Barnton-avenue, Davidson's Mains; Mrs. F. Campbell, convert self-contained house, 19, Eglinton-crescent, into three separate houses; Mr. W. B. Dalgleish, blacksmith's workshop, 27, Queen-street, Leith; Right Rev. H. Graham and another, church hall and offices, Ferry-road, in connection with the Holy Cross Roman Catholic Church; Edinburgh Royal Infirmary, convert three houses, 7, Archibald-place, into one house, to be used as a nurses' home; Scottish Malt Distillers, Ltd., convert Dean Distillery, Dean Path, into bonded warehouse; Mr. John Robertson, stables at Breadalbane-street, Leith; John Gibson & Son, Ltd., motor engineers, extend workshops, Jameson-place, Leith; Mrs. Gordon, alterations, 21, Heriot-row; Thomas Rankine & Sons, alterations to shop, 75, South Bridge; Royal College of Surgeons, alterations and additions, Nicolson-street premises; Mr. James Alexander, alterations, 92, Lothian-road; Mr. A. S. Blair, additions, 36, India-place; St. Cuthbert's Co-operative Association, Ltd., alterations to shops at 4-6, Spottiswoode-road.—The T.C. has agreed to offer £110,000 for certain L. & N.E. Rly. property at the East-end of Princes-street, the company stipulating that it shall not be used in such a way as to compete with the North British Station Hotel.

EPSOM.—Owing to the state of the present West Hill Infants' School strong representations are being made to Surrey Education Committee to erect a new school without delay.

FARNHAM.—The Housing Committee of the U.D.C. has been instructed to prepare a scheme for building as many houses as considered necessary.

FISHGUARD.—Plans passed by U.D.C.: Additions and alterations to Tabernacle Congregational Church for Trustees. The Ministry of Transport has notified U.D.C. that providing work is immediately put in hand grant of half cost will be made for widening 90 yds. of road (estimate £370) at Brynymor. The U.D.C. has instructed the Surveyor as follows: To obtain tenders for pavement construction at Market-square, West-street, Lewis-terrace and Victoria-avenue, and to submit to Ministry for grant road improvement scheme for Tregrolo and Cefn roads.

FLINT.—Plans passed by T.C.: House and farm buildings at Flint Mountain; bungalow at Bryntirion; new shop front in Trelawney-square; new public house in place of the present "Hawarden Castle"; and garage at the back of the "Royal Oak" Hotel.

GELLYGAER.—The U.D.C. has applied for sanction to erect public conveniences at Bargoed at estimated cost of £3,000. The Council has also applied for sanction to proceed with Deri and Cylla sewer schemes at estimated cost £47,000. The estimate twelve months ago was £7,000 higher. At a meeting of the Rhymney Valley Water Board it was decided to proceed with work of preparing supply to new houses, to be erected by Powell Duffryn Coal Co., at Heolddu and Bargoed, at estimated cost £1,250. It was reported that of the 500 houses to be erected by the Company in next five years, the plans of first eighty had just been approved by Gellygaer U.D.C.

GILDERSOME.—An enquiry has been held by the Ministry of Health (Mr. W. Cross, A.M.I.C.E.), into the Council's application for sanction to borrow £2,500 for sewerage works extensions. Two schemes were submitted by the Council, one of which was the proposed cleaning out and reconditioning the present works, which originally cost £12,000.

GOSPORT.—The Education Committee is considering the erection of a Central School on a site belonging to the Council in Gordon-road.

HALIFAX.—The T.C. is considering the immediate construction of a new reservoir at Gorple Valley, for which Parliamentary powers have already been obtained.

HAMPTON.—The U.D.C. has decided to build 24 houses.

HASLEMERE.—Plans have been prepared for a new Roman Catholic Church and Presbytery in Derby-road.

HECKMONDWIKE.—Plans passed by U.D.C.: Proposed new building line and alterations to property for Messrs. T. F. Firth & Sons, Ltd.

HOLSWORTHY.—Plan passed by U.D.C.: House, Whimble Hill, for Mr. J. H. Stranger.

HORNCASTLE.—A Ministry of Health inquiry has been held into the application of the U.D.C. to borrow £6,400 for installing a new Tully gas plant at the gasworks.

HORSHAM.—The Board of Education have approved the purchase by the Governors of the Grammar School of the old Cottage Hospital at Horsham for £2,500 and the expenditure of £500 on equipment, &c. It is intended to extend the school accommodation.

HOVE.—The T.C. are considering conditions under which financial assistance will be granted to house builders. The Ministry of Health has deferred sanction to the Corporation's proposal to erect 280 houses under the new Housing Act, as no action has been taken in connection with the erection of 20 houses for which sanction was previously given.

HUDDERSFIELD.—The Ministry of Health has sanctioned loan to the B.C. of £4,800 for erection of twelve houses on the Hollin Carr Estate. The Council have decided to extend Greenhead Park by taking in land at Gledholt-road.

HUNSWORTH.—Plans passed by U.D.C.: Conversion of two cottages and outbuildings at the Model Farm, Toftshaw, into four cottages.

LEEDS.—The General Purposes Committee of the Corporation have adopted relief schemes for the unemployed during the coming winter, estimated to cost £39,584, giving employment for 800 men each week. Extensive damage has been caused by fire at Messrs. Mann's Engineering Works, Hunslet; Messrs. A. & F. Moseleys are the architects for the rebuilding.

LEWES.—Sussex Territorial Army Association have submitted to the War Office tenders for converting Lewes Naval Prison into a local artillery headquarters, and hope to proceed with the work immediately.

LITTLEHAMPTON.—The extension of the U.D.C. offices was discussed on a tender of £2,000 being submitted. It was agreed to await further tenders.

LLANELLY.—The T.C. has instructed the Surveyor to prepare plans and estimates of work of arching the river Lliedi. Mr. H. Griffiths, Surveyor, Llanelly, has submitted plans for erection of houses at Ty'rfrau, on behalf of a client. The plans are to be amended so that no more than twelve houses will be built to the acre.

LLANTARNAM.—The Surveyor has reported to U.D.C. that Ministry of Transport has favourably considered the proposal of the Council to build new 30 ft. bridge and do road work at Abbey-road, at estimated cost £3,800, and advises Council to proceed at an early date.

LONDON (BERMONDSEY).—Plan passed: Alterations to "The Mitre," Tooley-street, for Messrs. Barclay, Perkins & Co.

MANSFIELD.—The T.C. have accepted tenders for 62 more houses, and sanction is being asked to a loan of £22,250.

MILFORD.—The Milford U.D.C. has passed following plans: Alterations to 13, Priory-street, for Miss Philbes; bungalow at Pill-lane, for Mr. F. Russel; additions to Wesleyan Chapel, Hakin, for Trustees; garage at 22, Greville-road, for Mr. W. Wilcox; additions to 13, Robert-street, for Mr. Sherriff. The Council has instructed the invitation of tenders for repairing and renovating Council Chambers.

MUSSELBURGH.—The T.C. has accepted the conditions of tender for 10 houses as a further instalment of the town's housing scheme. The question of widening the new stone bridge, with State-aid towards the estimated cost of £17,000, is under discussion.

NEWCASTLE-ON-TYNE.—On the initiative of the Bishop of Newcastle, a forward movement has been started for the erection of a number of new churches and mission rooms in certain centres where the population has lately increased, and may be expected to increase in the near future. The places that call for the earliest possible attention are Fenham, Balkwell (Percy Main), East Howdon and Chirton. A site for a new church, to be situated in Grange-road, Fenham, has been presented by Mr. J. R. Blackett-Ord.

PAISLEY.—Applications approved by Dean of Guild Court: Mr. Thomas Cullen, baker, 4, North Croft-street, shop and a dwelling house on the site at 14, Abercorn-street, and 2 and 4, North Croft-street; Galbraith's Stores, extension of their ham-curing department in Back Sneddon-street; trustees of the High Parish Church, additions to halls in Oakshaw-street; Paisley Society for the Treatment of Incurable Diseases, additions to property in Meiklerigg's.

PETERSFIELD.—The R.D.C. has had five proposals for providing a water supply to Liphook and Bramshott, and has decided to obtain expert advice.

PORT TALBOT.—The U.D.C. has accepted the offer of a free gift of land known as St. Theodore's Park, providing the Council submits scheme of laying out for the public before August 21, and such scheme is now being prepared.

PORTSMOUTH.—A Housing Investigation Committee is organising a campaign for the abolition of slum

* See also our List of Contracts, Competitions, etc.

property. It is reported that despite the house shortage 268 houses stood empty during the year.——It is proposed to widen Fratton Bridge on the east side and plans will shortly be placed before the T.C.——Artisans attending Copnor Baptist Church will carry out extensions to the Sunday School themselves. Materials are to be purchased out of a 3,000 shilling fund.

PRESTON.—Plans passed by T.C.: E. J. Andrew for Mr. Dobson, shop front, 48, North-road; Longworth & Gardner for Mr. Hodson and Mr. Crompton, two houses, Mulgrave-avenue; W. A. Carter for the Preston Industrial Co-operative Society, Ltd., alterations and additions, Moor-lane; F. N. Pinder for J. Shutt, garage, Skeffington-road, N.; R. Cooper & Sons for R. Tait, lock-up shop, Deepdale-road; N. Fazackerley, two houses, Tulketh-brow; J. Inman for Railway Mission, extensions, Corporation-street; J. W. Cookson for R. Shaw, lock-up shop, Holme Slack-lane; R. Cooper & Sons for Mr. Parish, scullery and bathroom, 7, Hill-place; J. W. Lee for Mr. Pike and Mr. Pottie, two bungalows, Powis-road; T. Cookson, garage, Tulketh-brow; T. L. Eaves for Mr. Smith, garage, St. Annes-street; A. J. T. Ellison for R. Kinnear, shop front, 198, Deepdale-road; W. G. Crossthwaite for Fryer & Hancock, shop front, Lord-street; F. Howorth for Miss S. Pickup, house, Fishwick-view.

RHYL.—Mr. J. C. Dawes has held a public inquiry into the Council's application to borrow £2,191 for the purposes of a town yard.

RISHTON.—Plans passed by U.D.C.: House in Blackburn-road, for Mr. G. Knowles; alterations to premises of Rishton Co-operative Society.

RUGBY.—Plans passed by R.D.C.: House, Mr. R. Bell, Long Lawford; village hall, Mr. J. F. Shaw, Bourton; bungalow, Mr. G. A. Johnson, Overslade, Rugby; house, Mr. H. C. Wheat, Brown's Farm, Hillmorton; conversion of barn into cottage, Mr. Binnersley, Dunchurch; garage and out-buildings for house, Mr. Blyth, Hill; dwelling house, Mr. H. TRADE NEWS.

Mr. W. S. Woolley, who recently resigned his position as managing director of Charles Credland, Ltd., paint, colour and varnish manufacturers, has been appointed manager of the Inland Department of the International Paint and Compositions Co., Ltd. Mr. Woolley's headquarters will be at the London office, 6, Broad-street-place, E.C.2.

Boyle's latest Patent "Air-Pump" Ventilators have been applied to the Refuse Disposal Works, Sheffield. Supplied by Messrs. Robert Boyle & Son, ventilating engineers, Holborn Viaduct, London.

Messrs. Gordon & Alexander, tile merchants, of Grafton House, Golden-square, W.1, have issued a new price list which is available on application.

James Austin & Son, Ltd., of Hoxton-square, N.1, are issuing an attractive pamphlet on plaited cordage and window ventilation.

Farnham U.D.C. (Surveyor, Mr. W. Cass, M.Inst. M. & Cy. E.) has placed the contract for scarifying, resurfacing and kerbing Hungryhill and Alma-lane, between Farnham and Aldershot, in the hands of Messrs. William Shepherd & Sons, Ltd., Milkstone, Rochdale.

Annual Outing.

The annual outing of the employees of Messrs. Jennison, Kett & Co., Ltd., 11, Queen Victoria-street, E.C.4, manufacturers of rolling shutters, iron doors, &c., took place on July 14th. Brighton was the venue, and a portion of the 9.15 a.m. train from London Bridge was reserved for the party, one section joining the other at New Cross. An excellent dinner was provided at the Jesmond Café, and the usual toasts were duly honoured. Mr. Willatt, works foreman, proposed the health and prosperity of the Directors, and of Mr. Pocock, works manager. Mr. Pocock, in reply, regretted the unavoidable absence of Mr. George Kett, the Chairman of the Company, and said it was very satisfactory to see that their number was double that of last year. A vote of thanks was accorded Mr. Willatt for making the arrangements.

NEW BUILDINGS IN SCOTLAND.

Glasgow.—Various.—The Dean of Guild Court has passed the following plans: Cathedral Church of St. Mary and of the Episcopal Church of St. Peter, to erect a hall at St. Peter's Church, Gardner-street; Duncan McKellar, 10, Kingsborough-gardens, Hyndland, to erect dwelling house at Crown-terrace; Corporation Electricity Department, to erect workshops at Dalmarnock Electricity Works, Dalmarnock-road; Galbraith's Stores, Ltd., Back Sneddon-street, Paisley, additions to bakery at Craigton-road, Govan; Civic Press, Ltd., 164, Howard-street, workshop at Brown-street, Port Dundas; James Templeton & Co., William-street, Greenhead, additions to premises at Crownpoint-road, estimated to cost £26,339; The Western Lawn Tennis Co., to erect tennis pavilion in Hyndland-road; Royal Bank of Scotland, alterations and additions to premises at corner of Howard-street and Jamaica-street; John C. McKellar, architect, 45, West Nile-street, to form roadway and sewer, and erect six terrace houses at Great Western-road and Julian-avenue; Corporation Housing Department, to erect dwelling houses at Yorkhill-street and Carfrae-street; Corporation Electricity Department, to erect a sub-station at Virginia-street, at Virginia-place; Archd. J. C. Colquhoun, of Killermont and Garscadden, Knockearn, Crieff, to form a road and sewer off Acre-road, Killermont.

Perth.—Football Enclosure.—The directors of St. Johnstone F.C. have decided to erect a large enclosure at the pavilion end of the ground, with seating accommodation for 1,000 persons.—The T.C. approved of plans prepared by Sir R. Lorimer for the restoration of St. John's Church.—Bacon Factory.—It is stated that a private company, entitled the Scottish Central Bacon Factories, Ltd., has been registered with a capital of £15,000, with a view to the erection of a bacon factory at Perth.—Slum Clearance.—In connection with a slum-clearance scheme the burgh surveyor has been instructed to prepare plans for the new houses to be erected in place of those to be demolished.

Collessie.—Public Hall.—The Cupar District Committee has passed plans for the erection of a public hall at Collessie for the Victoria Hall Committee.

Dundee.—Houses.—At a meeting of the Dundee District Committee of the Forfar County Council it was intimated that the Scottish Board of Health was prepared to subsidise the Committee to the extent of a further lot of six houses. The matter was remitted to the Road Metal Committee.

Aberdeen.—Various.—The Corporation Plans Committee has passed the following plans:—Alterations at 65, Westfield-terrace, for Mr. L. Mackinnon, per A. H. L. Mackinnon; additions to the Royal Mental Hospital, Cornhill-road, for the directors; reconstruction of shop fronts at 105 and 109, Holborn-street, for Mr. Wm. McDonald; additions to calendar winding house at Donside Paper Mills, for the Donside Paper Co., Ltd.; alterations at 159, Crown-street, for Mrs. Brown, 52, Bon-Accord-street, per Brown & Watt; extension to tea-room, 23–25, Union-street, for Mitchell & Muil, Ltd., per Wilson & Walker; a house in Broomhill-road, for Mr. P. Smith, per Sutherland & George; alterations at 7–13, Waverley-place, for Mr. G. A. Stephen, per Mr. G. Watt.

Bridge-of-Allan.—Villa.—Plans have been passed for a villa in Claremount-drive, for Mrs. Galbraith, Minewood, and for a pavilion for the Airthrey Spa Bowling Club.

Edinburgh.—Houses.—The Dean of Guild Court has passed eighteen plans, including several for houses in the suburbs. The Corporation were granted a warrant to erect a transformer house at Portobello Power Station, and Dr. W. H. Fowler to erect laboratories at 21, Walker-street, Edinburgh, for X-ray research.—National Library.—It is stated that Mr. Alexander Grant, of Messrs. McVitie & Price, biscuit manufacturers, has offered £100,000 as a permanent endowment of the proposed Scottish National Library.

Paisley.—Housing Schemes.—The Burgh Engineer submitted a plan at the last meeting of the T.C., showing how the available ground at Whitehaugh might be utilised by the erection of 136 two-apartment houses, eight three-apartment flatted houses, and 12 three-apartment cottages. It was agreed to submit this plan to the Board of Health for their approval immediately.—A letter was read from the Board of Health intimating that they cannot see their way to increase the amount of annual grant of £185 to the local authority in connection with the improvement of insanitary areas. It was agreed to proceed with the scheme, although the deficit payable by the local authority will be considerably more than £185 per annum.

Ayr.—Housing Schemes.—Mr. Cowie, the architect, has submitted a revised scheme to Ayr Corporation for the Woodfield site. It is designed to meet the provisions of the new Housing Bill. The Corporation have already built 40 houses and an additional 40 have been authorised. Mr. Cowie states that under the new Bill 160 houses could be built on the ground already owned by the Corporation, and on ground not yet acquired 72 houses. A committee is to submit a report regarding the finances of the proposals, and the Council will then fix what terms are to be offered to private persons who undertake to erect houses.

Alloa.—Houses.—Plans submitted by John Melvin & Son, architects, for a house in Alexandra-drive, for John Thomson & Son, builders, have been approved by the Dean of Guild Court, and consideration of plans, submitted by the same architects, for a house, shop and workshop in High-street and Drysdale-street, for Mr. J. Simpson, electrical engineer, has been adjourned

Dumfries.—Garage.—Plans have been passed for a large garage in Leafield-road for Dumfries Co-operative Society.

Glenfarg.—Convalescent Home.—The Fife, Kinross and Clackmannan Mine Workers' Association is considering an offer by Mr. John Calder, brewer, the gift of a site at Ardargie, near Glenfarg, for a convalescent home for members of the Association. The Executive will obtain a plan of the estate.

Rothesay.—Lighting Schemes.—In connection with the proposed electric lighting scheme the T.C. will apply for sanction to borrow the following sums:—£4,000 for public street lighting, £7,000 for private lighting and power, and later on £20,000 for the erection of a new generating station.

Office of Works Appointments.

In the House of Commons last week Mr. G. Jones asked the First Commissioner of Works whether his attention had been called to the proposed appointment of four men as assistant architects in the ancient monuments branch of the Office of Works; whether he was aware that two of them were not ex-service men; that applications were not invited from the unestablished staff for these posts, and that one man, if appointed, would receive £500 per annum, and thereby be in a better position than many who were his senior and had given continuous service.

Sir J. Baird said he had given very careful consideration to this question and was satisfied that the four officers referred to were the best qualified for the highly specialised work, and that their appointment was in the best interests of the department. Three of the appointments had already been made, and he regretted that he was unable to suspend the appointments as suggested. Of the total professional, administrative and clerical male staff of the department at present 75 per cent. had served with the Army, Navy or Air Force.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXV.—No. 4200. AUGUST 3, 1923

NOBLESSE OBLIGE.

HAVING once set up a standard or code of professional conduct we cannot help thinking it was unwise on the part of the Royal Institute of British Architects to take it away again. We may say at once that we sympathise with those who would ask why. Do we not like our good conduct to be taken for granted and prefer that we earn the character of gentlemen by our life and daily conduct rather than by specific protest of it? On the face of it there seems something almost absurd for a member of a learned profession to make any formal avowal of his intention to lead an honourable life. But it is to be remembered that the code of conduct set up by the Institute is calculated to remove some false impressions which have long gained credence. It is well that it be realised, not only by the architect himself, that his professional fees are his sole payment—that he cannot honourably take commissions of any sort beyond his fees—that if he has any interest in any material, device, or invention in building he must obtain his client's sanction before using it in his building—that he must not compete with another architect by means of a reduction in fees—and that he must not act as a house agent or auctioneer. Besides these there are other conditions of practice which, though they appear obvious enough to an honourable architect, do not perhaps necessarily appear so obvious to a client. Unfortunately our records have shown instances where the architect has fallen below even this moderate standard of professional conduct, and as the number of entrants to the architectural ranks is still increasing and is likely to be varied in character, there is something to be said as to the value of a code for architects themselves. We say this, though we do not subscribe to the full extent of the allegations made. *Noblesse oblige* does not mean the same thing to everyone, as we know only too well, and its significance is certainly not necessarily the same thing to the client as to the architect.

A great deal has been said and written about the status of an architect, about his special difficulties, his aims, and his drawbacks; it is not necessary in these columns to recount them, but the reinstatement in great part of the code of professional conduct by the present Council of the Institute, after it had been disowned by the previous one, has brought the subject forward again; whilst the recent decision to adopt a professional costume for ceremonious occasions appears to indicate a desire to promote a more definitely honourable or distinguished consideration for the profession. To the architect whose great aim is to leave behind him some impress of beauty in his buildings, whilst adding to the convenience and comfort of life, it may seem a rather trivial matter as to what dress he wears or the rules he is asked to subscribe to. We know that some of the great artists in the world have ignored all rules and, sad to say, many of the social obligations which make life pleasant and safe. But if we are to have a stable and secure civilisation, we must set up laws and enforce obedience to them. It has been found that in an equable civilisation everyone is agreed as to this, and, for the benefit of the average individual, architects must fall into line with laws and regulations; the great thing is to frame them wisely enough to make their exaction tolerable.

Because we know that the whole life is greater than the part, that the whole life of man is of more concern than the arts and graces which adorn it, that honour and truth are greater than decorations or visions, however beautiful, we cannot pretend to be unconcerned as to a code of professional conduct, whether it is to be founded and enforced by official regulations or by the voluntary outcome of an innate consciousness of right doing: that the conduct which is so guided is, beyond and above all, the best no one can dispute, but it may perhaps be well that we have somewhere written down the words of a faith which makes *noblesse oblige* a truth in our lives, for we should all like to feel that the practice of architecture is altogether in the hands of those who reverence truth and fair dealing. If the adopted code helps to make this a reality we may well subscribe to it, whether we feel it of any use to ourselves or not. The art of architecture need not be confused with the practice of it. The art will be none the better perhaps for the way in which it is conveyed into bricks and mortar, but for all that our desire for the evolution of fine art should surely be of less importance to us than the true and honourable way in which we carry out our obligations to our clients.

The shorter list of suggestions which should govern the professional conduct and practice of architects which has now been issued has only eleven items as against twenty-three in the former code—and probably covers all that is necessary; and whilst we can hardly believe such suggestions can do any harm, we can well believe that their existence may form a useful reference for the enlightenment of those who have little or no understanding of the conditions under which an architect works. On the whole, we think their adoption is well justified, notwithstanding our firm belief in the finer and better guiding value of *noblesse oblige*.

We are sure the Council of the Institute would not wish to impose a long array of moral obligations on architects such as would suggest a needful guarantee as to proper moral conduct. But the suggestions still remaining in the code can hardly be said to do this, as they are concerned with the usages of professional etiquette as tacitly accepted by all architects of good standing. It has been well said that we cannot make people good by Acts of Parliament, but the only object we see in these suggestions is to show what is the consensus of opinion amongst the leaders of the profession as to the broad general principles which should guide architects in their dealings with each other and the outside world. Taken and adopted in the spirit which has prompted them architects may be well content to accept them as now modified. We all know well enough that such a statement of good faith does not bar the door to unfair or wrongdoing if it is wilfully and determinedly undertaken, but it does place the desirable attitude of a noble profession in such a light that none can in ignorance go wrongfully in opposition to a code of action which is suggested as the right one for all architects to adopt.

NOTES.

The Bank of England.

That there are circumstances growing out of the altered conditions of business in our own time necessitating the reconstruction of buildings which sufficed for an earlier generation, few will care to deny. Whatever may be said of the new Regent-street growing up, changes were clearly inevitable. The question then arises, how far it is possible to retain any of the original features in a new scheme, or whether they must be entirely superseded by new buildings. But in a case where it is desired to retain the original features, we must do more than appear to retain them, and not mistake the semblance of doing so for the reality. For otherwise we embarrass the architect in such a way as to cripple his design, which is neither one thing nor the other; it does not really preserve the original, and dares not, cannot, be itself. This seems to us the defect in the present design for the Bank of England, for the design conveys only the semblance of retaining Sir John Soane's façade, the low horizontality of which is the determining feature. That taken away, the motive for preservation is taken away with it, for one intention is altogether replaced by another. And in such a case we do not really satisfy any of the requirements of authentic preservation, and have only saddled ourselves with an incubus tying our hands architecturally.

The Need of Further Consideration.

It is suggested in a contemporary that we had better become reconciled to the necessary enlargement of Soane's halls and lobbies, "provided that the present exterior remains." But are we not deceiving ourselves in thinking that as the base of a much loftier elevation raised upon it, anything of the original intention will be preserved, and it so, are we not allowing a rather sentimental and unreal influence to hold sway? We are unable to see the reality of a scheme which includes as possible the retaining of the present exterior and at the same time contradicts its whole intention by superimposing a lofty structure on the top of it. After all, the appeal to tradition and ancient buildings is not very strong in this instance, and we feel the whole matter is in need of further consideration in the light of the facts: on the side of the Trustees, because the interference proposed with the original building takes all reality away from the idea of preserving its original character; on the side of the architect, because the "parallel" illustrations he quotes ha so little application, as the engrafting the new on the old has in other ca little in common with the proposal mount one building on the top of other; and on the side of the Govern of the Bank because there is a danger proceeding on such a scheme with having properly thought the matter o

The R.I.B.A. and Country Members.

We are glad to announce decision of the Council of Royal Institute of Brit Architects to arrange in vember next in Londor three-day meeting, which will include so of the annual functions at present held separate dates during the year. The i is an excellent one, and is an indicat that the desires and the convenience country members are to be conside more than they have been in the p If the experiment proves successful is hoped in future to arrange annual "architects' week" in Lon (which will not, we hope, dispense w the annual provincial meeting), in wh will be included the annual dinner, presentation of the Royal Gold Me the President's inaugural address, a perhaps, other functions. Some s arrangement would give country me bers an opportunity of attending the m important functions of the year durin single visit to London.

Standardisation of Buildings.

In the course of the spe made by Mr. Harvey Corb on the occasion of the dis bution of prizes to stude of the Architectural Association we w made aware of the danger of America ing our institutions and of the dwelling in over-standardisation. he tells us—and we are all the happ for thinking so—that "Architectu conditions in America and Britain w difficult to compare owing to the f that, in the former, buildings were m standardised; consequently, there w not so much scope for individuality there was in Britain." This we take to a compliment to British architecture a trust that we shall retain our natio characteristics. For there is danger l under the pressure of commercial intere our buildings should reflect the sal man more than the architect, and do not want to see the former carry out his own building through paid as tants and in the end displacing qualified architect altogether. That are not without symptoms of architect in such a way becoming in pawn to c merce, we must admit, though hop that this levelling down tendency wil resisted. The prospect of the commer house including an architectural dep ment furnished with assistants wit

Eglise du Finisterre, Brussels. From a sketch by Mr. H. T. Rees.

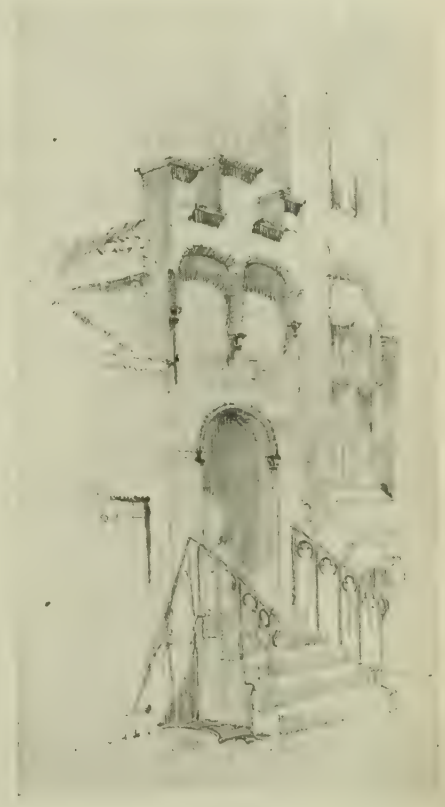
Door in Beguinage, Bruges.
From a sketch by Mr. H. T. Rees.

liberty but to carry out the orders given them, is not so fanciful that we can afford to disregard the danger.

"Levelling Down."

This tendency is the blight of democracy and undermines both the discipline and freedom through which ideals should grow. But we must look further back to understand what has in certain ways disintegrated the strength of architecture, and in its divorce from vital craftsmanship we shall perceive one of the reasons. The lack of corporate strength on the one side has weakened its hold on the other, for we must understand the causes if we are to reach the cure; and there never was a time when a closer corporate unity between the arts was more imperative, for their country is in danger. The neglect of vital craftsmanship in the past foretold to the more thoughtful that its reaction would not stay there, but that the architect would be the next to suffer. For if architecture could exist without this more authentic quality of vital craftsmanship, leaving it to the commercial house to interpret his office drawing in a way more lifeless than itself, might not the commercial house itself decide a little later to absorb the architect as well. Is the architect who standardised his craftsmanship now being standardised himself? We know how fine is the example of some architects in insisting on personal craftsmanship, and the present decision of the R.I.B.A. to include a list of independent craftsmen for reference is a sign of the growing appreciation of this lack. Nor do we say that the evils we suggest are yet paramount, but is not the danger very real that in the pursuit of commercial enterprise the salesman may decide to run a department for his other stores, becoming a salesman of architecture as well?

The Bossom Studentship.



The Travelling Studentship which has been so generously endowed by Mr. Alfred Bossom, of New York, should be of real service in aiding our students to take a wider and more exact view of the possibilities of commercial architecture. The holder of the studentship is to spend six months in the United States in the study of commercial architecture, and as the results are to be made known by means of writing and illustration, we may expect these studies will have a far-reaching influence. The student who shows a good grasp of the subject and the significance of its various aspects will prove his fitness for architectural service as assistant or principal in a very definite way; and it is not perhaps necessary that he should lose the individuality and character which residence in our island home helps to foster.

Qualified Women in Social Work.

We hear so much of what a woman can do as well as a man, that an account of special work which the right woman can do better than the right man is doubly refreshing. Two women surveyors have been appointed to the task of taking over old houses in Cumberland Market, Regent's Park, the leases of which are falling in. Owing to the present shortage the houses cannot now be pulled down and the surveyors' efforts must be used to make the houses as habitable as possible and to ease the overcrowding. Over fifty families, it is stated, are huddled into one room a family! In addition the surveyors are trying to reduce the number of licensed houses on the estate, which consists of 1,700 to 1,800 tenancies. The value of such social ambulance work cannot be over-estimated; it is as useful to social health as more ambitious ideals of reconstruction, and is much nearer to attainment. The familiar difficulty of getting suitable girls for domestic service has its counterpart among highly educated women, and despite the varying opportunities that social work, with all its human intimacy, can offer, it has little attraction for the professional girl. We all know that in the interest of a misnamed "voluntary spirit," social workers have been underpaid for exacting hours, and the work itself has been disparaged as dowdy or interfering. The departure we have cited proves that no qualification can be too high for the service required.

General Housing Memorandum No. 64.

It would be interesting to know the points of difference between the Ministry of Health and the Surveyors' Institution as to the intention of Memorandum No. 31 referred to in this Memorandum No. 64. As it is obvious there were differences, the representatives of the Surveyors' Institution are to be congratulated upon getting, as shown in the information we give on p. 183, a clear statement as to the intentions of the Ministry. The explanations regarding Clauses *d* and *e* seem to us common-sense readings of the original clauses. Possibly exception may be taken to that portion of the explanation of Clause *e* with regard to items of omission taken bodily from the bill of quantities; but as this evidently does not apply to similar items of addition, no reasonable complaint can arise on this reading of the clause. The explanation regarding Clause *f* seems to cover every contingency, but we should have preferred to see the last paragraph of the original memorandum eliminated, as it seems contrary to present-day ideas of justice that one party to an agreement should be the sole judge in the event of any dispute on that agreement.

Doorway in Rue Est de Ghistelles, Bruges.
From a sketch by Mr. H. T. Rees.

GENERAL NEWS.

Professional Announcements.

Mr. W. Scotter Owen, M.A., A.R.I.B.A., P.A.S.I., architect and surveyor, has removed to 9, King's Bench Walk, Temple, E.C. 4. Telephone: City 3434.

Addington Park, Surrey.

The engineering work, including electric lighting and bells, hot and cold water supply and hot-water warming, sanitary arrangements and sewage disposal, at Addington Park, Surrey, illustrated in our issue for July 13, was designed and supervised by Mr. A. S. E. Ackermann, B.Sc., A.C.G.I., A.M.Inst.C.E., of 17, Victoria-street, S.W. 1. Mr. E. Guy Dawber, F.R.I.B.A., is the architect.

"Tudor" Building, Argyll Place, W.

The sub-contractor for the cast-lead pipes, gutters and rain-water heads, for "Tudor" Building, Argyll-place, W., illustrated in our issue for July 27, was Mr. J. L. Emms, of 140, FitzNeal-street, Shepherd's Bush, W. 12. The architects are Messrs. Edwin T. & E. Stanley Hall, F.R.I.B.A.

Institution of Municipal and County Engineers.

A meeting of the Irish District will be held on August 15, at 2.30 p.m., at the Institution of Civil Engineers' Library, 35, Dawson-street, Dublin. The agenda may include: To select a Vice-President; to consider the question of forming a local committee and arrange dates and centres for future meetings, &c.

University College, London.

An Entrance Exhibition fo the value of £40, tenable in the Bartlett School of Architecture for five years, subject to satisfactory progress, will be awarded in September. Full particulars may be obtained on application to the Secretary of University College, London.

Church Plate and Roman Pottery.

The church council of St. Martin-in-the-Fields have placed on permanent loan at the London Museum a collection of twenty-two pieces of ecclesiastical silver plate, mostly gilt, English work of the seventeenth and eighteenth centuries. The vessels include a pair of silver-gilt flagons bearing the London hall-mark, 1634 and 1746 respectively; another pair with the London hall-mark, 1726; a chalice bearing the hall-mark 1649, and another that of 1726, both silver-gilt; and a silver-gilt alms dish with the London hall-mark 1720.

Liverpool Housing.

The Liverpool Corporation has been recommended to accept the lowest tender (that of Messrs. Wm. Hall & Son), at £29,995, for the demolition of 90 buildings and the erection of 60 tenement dwellings on the site.

House of Lords War Memorial.

Lord Curzon, replying to a question from Lord Cawley in the House of Lords, referring to the proposed memorial to be erected within the precincts of the House, said that so far £8,000 was available. It had been suggested that the great marble monument in the Princes' Chamber behind the throne should be removed and that the site should be utilised for the memorial. The King had readily given his assent to the removal of the monument to the head of the great staircase in the Victoria Tower. The Committee which had been appointed in connection with the memorial had authorised him to communicate with Sir Thomas Brock, the sculptor, who undertook to act as adviser and assessor. On Sir Thomas's suggestion four sculptors of eminence sent in sketch models of their designs, but unfortunately not one of them expressed the object the committee had in view. A few months later Sir Thomas Brock died, and he (Lord Curzon) was then authorised by the Committee to approach another eminent sculptor, who accepted the undertaking, and he was hopeful that when the House reassembled in the autumn he would be able to submit the sculptor's model, which would be worthy of the great event it perpetuated. The sculptor had decided in favour of the site in the Prince's Chamber.

COMPETITION NEWS.

Westcliff-on-Sea Crowstone Congregational Church.

In the competition for a church, to cost about £20,000, twelve designs were submitted, and the award of the assessor, Mr. Arthur Keen, F.R.I.B.A., was as follows: First (premium, £100), George Baines & Son, F.R.I.B.A., F.S.Arc., London; second (premium, £52 10s.), J. H. Sellers, Manchester.

Melbourne National War Memorial Competition.

The following are the names of the winning architects and sculptors in the Melbourne National War Memorial Competition:—

First Premium (250 guineas).—Sculptor, Mr. C. Web Gilbert; architects, Messrs. Stephenson & Meldrum, sculptors, of Melbourne.

Second Premium (100 guineas).—Sculptress, Mrs. Jess Lawson Peacey, B.I., A.R.C.A.; architect, Mr. G. Gavan Lawson, of Adelaide.

Third Premium (50 guineas).—Sculptor, Mr. W. L. Bowles; architect, Mr. G. G. Prentice, of Brisbane.

The premiated designs are illustrated in this issue. (See p. 174).

The Royal Society of Arts.

In connection with the competition of students of schools of art, in accordance with the terms of the Owen Jones Trust, the Royal Society of Arts have awarded one-half of the special prize of £20, the Society's medal, and a prize of books to Emma Seel, of the Macclesfield School of Art, for an openwork corner of embroidered table cover, and to S. Griffin, of the School of Art, Nottingham, for a design for an embroidered machine-made lace bedspread with worked portion. The Society's medal and a prize of books went to Norman Dawson, School of Art, Macclesfield (printed silk dress fabric); George Kershaw, School of Art, Macclesfield (woven silk dress brocade); Ethel Mary Bennett, School of Art, Newport, Mon.; Kathleen Goodwin, School of Art, Stoke-on-Trent (pottery statuette, "Will o' the Wisp"), and George Sidwell, School of Art, Technical Institute, Leyton, Essex.

The designs will be on view from August 4 until September 16, from 10 a.m. to 5 p.m., in the Class Room, Department of Textiles (first floor), Victoria and Albert Museum, South Kensington, S.W.

An Old Doorway.

[This ancient doorway is shortly to be demolished. We understand that it may be purchased, and shall be pleased to put those interested in communication with the firm carrying out the demolition. We have also been informed of a thirteenth-century mantelshelf in a Gloucestershire cottage which is in the market.]

Wirrall Union.

For the Guardians.—Design for extensions at the Poor Law Institution, Clatterbridge. Premium, £50. The conditions of this competition are not in accordance with the regulations of the R.I.B.A. and Society of Architects, and members are advised to take no part in it.

Memorials to the Missing.

For the Imperial War Graves Commission.—Designs of memorials to the missing on four battlefields on the Western Front. Sending-in day, January 1, 1924. (See advertisement this week.)

New Wesleyan Church and Sunday School Warrington.

Design for a church and school for the Wesleyan Circuit. Cost between £5,000 and £6,000. Sending-in day, August 8. Further particulars from the Rev. H. Kirby, 2, Palmyra-square, Warrington. Block plan may be seen at *The Builder* offices.

The conditions of this competition are not in accordance with the regulations of the R.I.B.A., and Members and Licentiates are advised to take no part in it.

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Singapore College (Jan. 1, 1924; March 30). Greenwich Baths (Aug. 25; May 4). Hull Art Gallery (Nov. 5; May 4). Mint competition for plaques (Sept. 30; May 25). Birmingham Masonic Temple (Sept. 12; June 22). Colour scheme (Sept. 30; June 29). Glasgow Pavilion (June 22).

ARCHITECTS' CRICKET MATCH.

Royal Institute of British Architects *versus* Architectural Association.

Match played at Elstree on July 18. A.A. won by 106 runs.

Scores:—

CORRESPONDENCE.

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Our Modern War Memorials.

Sir,—Apparently we have as many classic cranks among our architects and sculptors to-day as existed in the early part of the nineteenth century, when Westmacott executed the nude figure of Achilles in Hyde Park to commemorate the Duke ot Wellington. In London I have only seen three representative memorials that do not require an interpreter—they are Miss Cavell, Sir Aston Webb's figure of a British Tommy outside the Royal Exchange, and the Holborn Bars memorial. The largest and most costly in London is a huge block of masonry, a complete copy of a pagan memorial dating from the fifth century B.C. This has not a single detail to distinguish it from a memorial to the late Mr. Socrates.

In a recent tour in South and West Wales I only came across two representative memorials that the ordinary man in the street could appreciate at a glance; they were beautifully modelled figures of British soldiers, one at Llanelly and the other at Lampeter. In the St. George and Dragon type all the figures have the placid expression of an Oxford Undergraduate resting his punting pole on the back of a fearsome beast while he lights his cigarette. In the matter of churchyard crosses we seem to have been more fortunate; one of the most graceful I have seen is at Christ Church, Sunderland. This was designed by Mr. John Hall, the architect.

Edward Vale.

Weston-super-Mare.

The Artist's Security.

Sir,—May I point out, in respect to your argument about "the artist's security" being "best sustained by undivided attention to his work," that this, while a good ideal, is practically out of the question in modern life, when the artist has either to attend to numerous mundane affairs, or starve.

But if the artist's profession was soundly organised, many of these mundane matters would be attended to for him by his organisation, where his views would be represented through any delegate he liked or society in which he took an interest. To attend, say, once a month, a committee; and, say twice a year, a conference, need not take up nearly as much of the artist's time and thought as now has to be frittered on "society" parties, and on publicity stunts, or the efforts to attain these (or else go without commissions).

If the artist took the trouble and the interest to organise his profession he ought to find himself, thereafter, with much more liberty to give freely to his work, as the struggle against the tide, in the present state of things, would not weigh so heavily on him.

Much of the rushing about that an artist nowadays has to do if he wants to be known at all in his life-time, would not be necessary if he was a member of an organised profession.

In the Middle Ages and in the finest periods of art, as everyone knows, the artist was a member of an organised profession. The modern chaos really is comparatively modern!

A. D.

Office of Works Appointments.

Considerable dissatisfaction exists in the Office of Works concerning certain appointments which have been made recently, as was indicated by the question in the House which we quoted in our last issue. More than one Civil Service organisation has protested against them, and among them the Institution of Professional Civil Servants, from which body we have received the following *précis* of the case as it appears from the professional point of view:—

"At the request of the Professional and Technical Association of the Office of Works the Institution wrote in May to the First Commissioner asking that four proposed appointments to the Ancient Monuments Branch should not be made. The grounds for this request were that no notification of the vacancies had been made to the staff, a procedure contrary to that which had been agreed upon on the Departmental Whitley Council, and that there was nothing exceptional about the qualifications of the four men whom it was proposed to appoint. To this letter the First Commissioner took exception. The Institution then wrote a second letter in which further comment was made on the proposals. It was pointed out that though some of the work in the branch was concerned with such relatively modern buildings as Chelsea Hospital, Kensington Palace, &c., a considerable portion of it was concerned with more ancient structures, such as Stonehenge. Only one of the four men whom it was proposed to appoint had had any experience in that section of the branch, and in his case great secrecy had been observed in making the appointment. Further, there had previously been an invitation issued to unestablished officers in the department to apply for posts in the Ancient Monuments Branch, and ten applications had been sent in. Most of the applicants had been in the branch from its inception. Owing to a change of plan, none of the earlier vacancies had been filled. None of the applicants had been interviewed, and when the later appointments had been proposed, none of the original applicants, nine of whom were pre-war men, had been invited to renew their applications. In addition to this, no notification had been made which would enable suitably qualified persons in other branches of the Civil Service to apply for the posts.

"Particular exception was taken to one of the four proposed appointments. The person concerned had never served in the branch. In 1915 he had been engaged in erecting temporary hutting for searchlight and gun stations, and had then been sent to a shell-filling factory until he had resigned from the Government service to go to an oil company. It was then proposed to take him back into a highly specialised branch, and to establish him at a salary well above the maximum of the grade in which he had been serving at the time of his resignation, although many men previously his juniors were still below the salary bar. It was difficult to see how his value to the department could have increased to such an enormous extent by his service with the oil company, especially as there were many assistant architects in the branch who had very adequate qualifications for the posts.

"To this reasoned series of arguments the Office of Works merely replied that it had nothing further to add to its first letter. This case was also taken up by the Association of ex-Service Civil Servants."

Port of London Extensions.

Important new works and improvements are to be undertaken by the Port of London Authority. They include a considerable extension of the Surrey Commercial Docks system, a further development at the Royal Victoria Docks of the facilities for dealing with imported meat, the making of an entirely new dock, lock, and dry dock at Tilbury, and the construction of a much-needed passenger landing stage at Tilbury contiguous to the existing docks. The cost of carrying through these schemes, exclusive of land, will be about £5,000,000.

War Memorial Screen and Lectern at Herne Hill Church.

Mr. Gerald Cogswell, A.R.I.B.A., Architect.

[This screen is 21 ft. 6 in. wide by 12 ft. high, and was executed by Mr. Herbert Read, of Exeter, from the design and full-size cartoon of the architect.]

SUGGESTIONS GOVERNING THE PROFESSIONAL CONDUCT AND PRACTICE OF ARCHITECTS.

The following "Suggestions Governing the Professional Conduct and Practice of Architects" have been adopted by the Council of the Royal Institute of British Architects, and have been ordered to be printed in the "Kalendar" for the guidance of members :—

An Architect in practice, if a Member or Licentiate of the R.I.B.A., is governed by established customs accepted and observed by the architectural profession, and more particularly by the Charter and By-laws of the Royal Institute, which render him liable, in the case of unprofessional conduct, to reprimand, suspension or expulsion, at the discretion of the Council.

The following may be considered to record in a general way the practice of architects and also to indicate a standard of conduct in any special cases not specifically referred to therein :

1.—An Architect is remunerated solely by his professional fees, and is debarred from any other source of remuneration in connection with the works and duties entrusted to him. It is the duty of an Architect to uphold in every way possible the Scale of Professional Charges adopted by the Royal Institute. An Architect must not accept any work which involves the giving or receiving of discounts or commissions, nor must he accept any discount, gift or commission from contractors or tradesmen, whether employed upon his works or not.

2.—If an Architect own, or have a commercial interest in, any material, device, or invention used in building, he must inform his client thereof and must obtain his sanction before permitting it to be used in works executed under his direction.

3.—An Architect must not publicly advertise, nor offer his services by means of circulars. He may, however, publish illustrations or descriptions of his work and exhibit his name on buildings in course of execution (providing it is done in an unostentatious manner), and may sign them when completed.

4.—An Architect must not attempt to supplant another Architect by means of a reduction of fees or by other inducement.

5.—In all cases of dispute between employer and contractor, the Architect must act in an impartial manner. He must interpret the conditions of a contract with entire fairness as between the employer and the contractor.

6.—An Architect must not permit the insertion of any clause in tenders, bills of quantities, or other contract documents, which provides for payment to be made to him by the contractor (except for duplicate copies of drawings or documents), whatever may be the consideration, unless with the full knowledge and approval of his client.

7.—An Architect should not take part in any competition as to which the preliminary warning of the Royal Institute has been issued, and must not take part in any competition as to which the Council of the Royal Institute shall have declared by a Resolution published in the *Journal* of the Royal Institute that Members or Licentiates must not take part because the conditions are not in accordance with the published Regulations of the Royal Institute for Architectural Competitions.

8.—An Architect must not act as Architect or joint Architect for a work which is or has been the subject of a competition in which he is or has been engaged as Assessor.

9.—It is desirable that, in cases where the Architect takes out the quantities for his buildings, he should be paid directly by the client and not through the contractor, except with the previous consent of the client.

10.—The businesses of Auctioneering and House Agency are inconsistent with the profession of an Architect.

11.—An Architect must not accept an appointment in any commercial firm in which the extent of his remuneration is affected by the profits of the firm.

THE R.I.B.A. ALFRED BOSSOM TRAVELLING STUDENTSHIP

For the Encouragement of the Study of Commercial Architecture.

1.—The Board of Architectural Education will appoint a Special Jury, consisting of three Architects (including, if possible, the President of the Royal Institute of British Architects), a builder, and a property owner, to control and conduct the competitions for the Award of the Silver Medals, the Gold Medal, and the Studentship. The builder serving on the Jury will guide his colleagues on the estimates of cost, and the property owner on the estimates of revenue.

2.—The competitions will be confined to those Students of the "Recognised" Schools of Architecture which enjoy exemption from the R.I.B.A. Final Examination who, after passing through the School Courses, have attained the Associateship of the R.I.B.A.

3.—On the recommendation of the Board of Architectural Education, other Schools of Architecture at present not "Recognised" for Final Exemption may be admitted to the Competition, so that those of their Students who have passed the R.I.B.A. qualifying Examinations and have attained the Associateship of the R.I.B.A. may take part in the competition.

4.—An additional competition will be arranged by the Jury which will be open to Associates of the Royal Institute who have not passed through one of the "Recognised" Schools or one of the schools mentioned in paragraph 3. A silver medal will be awarded to the winner.

5.—The Jury will set a subject each year and send it to the Schools. Each of the Schools will appoint a local Jury of similar composition to the Jury mentioned above, to conduct the competition and award the Silver Medal for the best design submitted by a graduate of the School. Each design will be accompanied by an approximate estimate of the cost of the building and the financial return from it. The silver medals awarded at the Schools will be known as the "Alfred Bossom silver medals for Commercial Architecture." The silver medals will be handed to the successful competitors at the annual distribution of R.I.B.A. prizes and studentships.

6.—The designs of each of the winners of the silver medals will be forwarded to London, where they will be judged by the Jury.

7.—The Jury will award the "Alfred Bossom Gold Medal" and the "Alfred Bossom Travelling Studentship" to the author of the best design submitted to them. The gold medal will be handed to the successful competitor at the annual distribution of the R.I.B.A. prizes and studentships.

8.—The holder of the Studentship will be required, within a period of not more than six months from the date of the award, to journey to the United States of America and spend not less than six months there in the study of commercial architecture.

9.—On arrival in the United States the student will report himself to the Architectural League of New York, which will, by means of a Special Committee appointed for the purpose, give him advice and guidance on the subject of his studies.

10.—At the conclusion of his stay in the United States the holder of the studentship will be required to submit a detailed and illustrated report on a particular branch of the subject laid down by the jury. This report, when approved by the jury, will be printed and copies will be sent to each of the competing Schools of Architecture and to each student who has taken part in the competition of the year.

11.—The travelling student will be paid the sum of £250 to meet the cost of his journey to and from the United States and his stay of not less than six months in that country.

12.—The complete Roll of Silver Medallists and Gold Medallists will be kept at the Royal Institute of British Architects, and copies of the reports will be preserved in the R.I.B.A. Library.

13.—Mr. Alfred Bossom has generously undertaken to provide funds to meet the cost of the scheme, including the provision of the Medals and the payment of the Travelling Students, for a period of five years.

14.—At the end of five years the Board of Architectural Education will submit a report to Mr. Bossom on the working of the scheme, and will discuss with him any modifications which may be found to be desirable with a view to placing it on a permanent basis.

15.—Mr. Bossom will arrange for the design, costing and supply of gold and silver medals.

[The scheme has been approved by the Board of Architectural Education, who cabled their grateful thanks to Mr. Alfred Bossom, of 680, Fifth-avenue, New York, for his generous gift.]

Notes from the Council Minutes.

Following are notes from the minutes of the Council Meeting held on July 23, 1923 :—

The Future Policy of the R.I.B.A.—The Council instructed the Charter and By-laws Committee to meet forthwith for the purpose of considering the general question of the policy to be pursued during the coming Session, and to report upon it at the first meeting of the Council after the recess.

Gothenburg Town-Planning Conference.—Mr. Raymond Unwin was appointed to represent the R.I.B.A. at the International Town-Planning Conference to be held at Gothenburg from August 3 to 10, 1923.

The R.I.B.A. and Country Members.—Upon the recommendation of the Allied Societies' Conference, it was decided to arrange in November next in London a three-day meeting which will include some of the annual R.I.B.A. functions at present held on separate dates during the year. If the experiment proves successful it is hoped in future to arrange the Annual "Architects' Week" in London in which will be included the Annual Dinner, the presentation of the Royal Gold Medal, and the President's Inaugural Address. and perhaps other functions. In this way it is hoped that country members of the R.I.B.A. will be given an opportunity of attending the most important annual functions of the R.I.B.A. by making a single visit to London only.

Professional Conduct and Practice.—Upon the recommendation of the Practice Standing Committee the Council ordered to be printed in the Journal and in the next and all subsequent issues of the R.I.B.A. Kalendar a revised series of regulations or Professional Conduct and Practice entitled "Suggestions Governing the Professional Conduct and Practice of Architects."

New Allied Society.—The Burma Society of Architects was admitted to alliance with the R.I.B.A. under the provisions of By-Laws 77 and 78.

R.I.B.A. EXAMINATIONS.

The Intermediate Examination, qualifying for registration as Student R.I.B.A., was held in London, Leeds and Birmingham from June 1 to 7. Of the 94 candidates who presented themselves, 33 passed and 61 were relegated. Successful candidates in order of merit :—

A. H. Gardner, Coventry.
G. L. Martin, Seaham Harbour.
C. H. Dann, Norwich.
K. W. F. Harris, Maidstone.
M. H. Powell, Moseley.
H. F. Mason, London.
H. Darsa, Shepherd's Bush.
W. C. Barrett, Birmingham.
R. E. M. Coombes, Llandaff.
R. H. C. Cornford, London.
W. C. Ellis, Mansfield.
E. A. E. Evans, Port Talbot.
A. C. Garwood, Lambeth.
*A. E. Geens, Bournemouth.
F. G. Goodin, Reading.
G. Griffiths, Penarth.
W. H. B. Harris, Bridgwater.
L. S. Jones, Reading.
C. F. Kimber, Evesham.
U. Liverseege, Edgbaston.
C. S. Morley, Bolton.
H. Overnell, Tunbridge Wells.
H. R. Parkin, Leeds.
A. H. Petherbridge, Paignton.
W. J. B. Price, Ilford.
D. J. Rogers, Handsworth.
B. J. A. Smith, Southfield.
H. W. Stokes, Birmingham.
E. B. Tyler, Penarth.
E. J. Whitwell, Handsworth.
C. Wild, Failsworth.
G. Williams, Hull.
F. G. Yorath, Burslem.

The Final and Special Examinations qualifying for candidature as Associate R.I.B.A., were held in London from June 14 to 21. Of the 27 candidates admitted (two of whom took Part I only, having elected, in accordance with the regulations, to take the Examination in two parts), 11 passed, and the remaining 16 were relegated. The successful candidates are :

T. M. Alexander, Liverpool.
S. N. Buchia, London.
R. J. B. Clark, Penzance.
W. Doddington, New Cross.
*A. Hafez, Kensington.
*H. Z. Kassem, Cairo.
A. J. May, Bristol.
*F. Mikhail, Kensington.
R. A. F. Riding, Earl's Court.
W. Ross, Glasgow.
S. Toy, London.

The candidates marked * are not British subjects, but have taken the examinations for the purpose of obtaining certificates to that effect. The following candidate passed the Special Examination held in Bombay, from April 23 to 28 : A. D. Parham, Colombo.

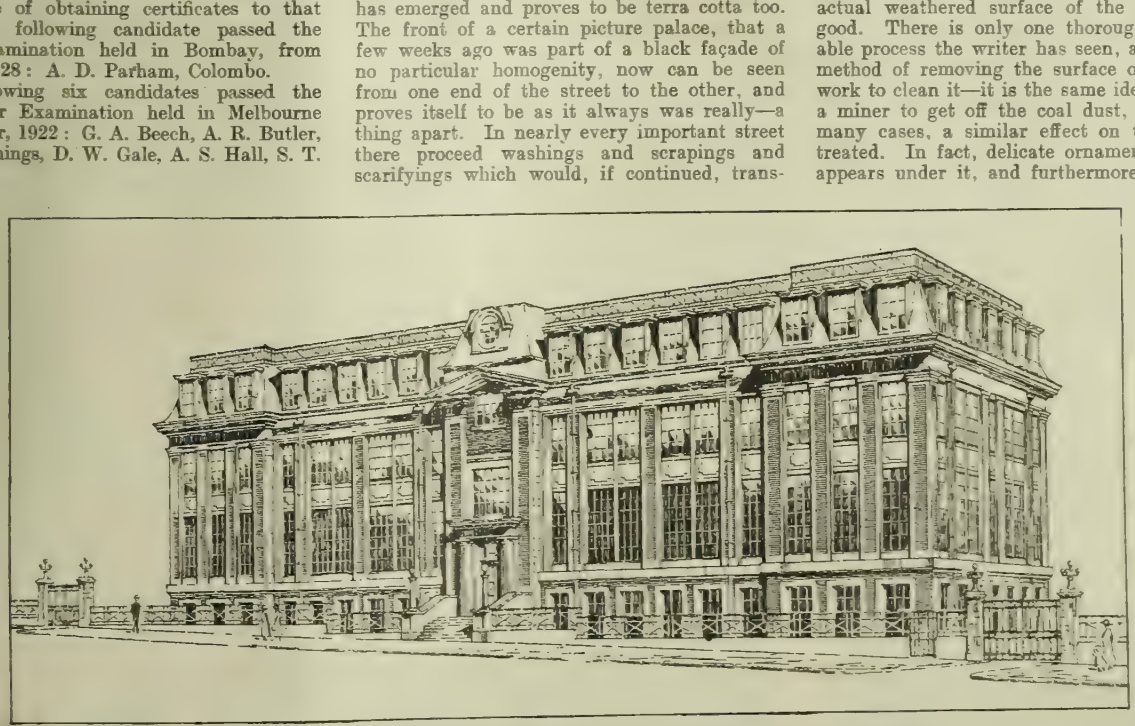
The following six candidates passed the Special War Examination held in Melbourne in December, 1922 : G. A. Beech, A. R. Butler, C. L. Cummings, D. W. Gale, A. S. Hall, S. T. Parkes.

WHY NOT CLEAN FACADES?

A PLEA FOR BRIGHTER STREETS.

By J. HEMBROW, A.R.I.B.A.

We keep our faces, our collars, and our carts washed, our streets scoured, and are even careful of our reputations because of the cost of cleaning them if they get really dirty. Why should we neglect our façades? The writer has advocated in the lay press the desirability of having our buildings freed from the accumulation of soot and worse which in our industrial cities cloaks them and dulls them. Although very few practical objections have been raised (except that of expense), the opponents of the idea are tenacious. One esteemed friend says that he likes to see a building grimy with age.



Now, this last idea sounds well, but it is based on a false hypothesis. Age is venerable, but dirt is not, and a building is no more venerable because of its dirt than a nasty old man who has refused to allow nimself to be washed for fifty years. The dirty building, in fact, arouses our pity because it cannot bathe itself and has to stand to be fogged on, smoked on, and splashed on and defiled by all manner of foulness without being able to wink an eyelid! But the idea has a hold on many people and its prevalence is discouraging.

In this frame of mind the writer recently found himself with some hours to spend compulsorily in Manchester (that a Manchester man never stops in Manchester if he can avoid it is well known), and he was almost encouraged to think that somebody had been reading what he had been writing, and this is always exhilarating to a man. The reason for this daring thought was that a lot of buildings in Manchester, to use a Northern phrase, were "getting themselves cleaned." Long dark ravines with soot-obscured fronts suddenly revealed a building that had design and in some cases colour of which nobody knew.

It was a sacred secret which the older inhabitants of Manchester knew (and the better informed rather prided themselves on knowing it) that the Midland Hotel was built mostly of terra cotta with a polished granite base. It is now common knowledge. A building in Cross-street was considered to be in stone—that also has emerged and proves to be terra cotta too. The front of a certain picture palace, that a few weeks ago was part of a black façade of no particular homogenity, now can be seen from one end of the street to the other, and proves itself to be as it always was really—a thing apart. In nearly every important street there proceed washings and scrapings and scarifyings which would, if continued, transform streets which now look like horizontal smoke-flues with the top removed to the thoroughfares with individuality and brightness and in some cases design. Surely people are happier where surroundings are brighter.

In point of fact it is probably merely that common sense being common has lately revealed to people that when they spend time and money in cleaning and polishing motor cars and boots which get dirty as soon as they are used, when they wash down pavements perhaps each day, when a smut on one's immaculate shirt front or flannel "bags" is a disgrace, it cannot be a virtue to keep one of our possessions, *i.e.*, our façades, filthy. I believe it is merely that hitherto no one has thought much about it. Now, why should not the outside of a building be kept within reason as clean as the inside? Which gets dirtier? It is not always the cost. There are already instances of terra-cotta buildings where window-cleaning companies are engaged who clean the windows about once a month—and who have undertaken to wash down the terra-cotta front once in a short period of years for a sum that only adds a percentage to their ordinary work. After all, why should you clean the floor, the front step, the windows, and leave the walls? Why should you paint the dirty woodwork once in five years and leave the stone still so foul and crusted that one dare not even touch it. It is purely habit, and a very dirty habit. It is no more a virtue to let your house exterior get filthy than to let your garden get weedy or your body foul. If the insides of our buildings were allowed to get as foul as the outsides there would be a plague, and what is the good in any case of using materials with taste and discretion when the artist knows that in ten years time none will know whether they are stone or cement. The time will come when people will be asked to keep exteriors clean, as they are required to keep interiors sanitary.

There are already many excellent processes for cleaning suitable to various materials, any one of which, provided it does not disturb the actual weathered surface of the material, is good. There is only one thoroughly undesirable process the writer has seen, and this is a method of removing the surface of the stonework to clean it—it is the same idea as flaying a miner to get off the coal dust, and has, in many cases, a similar effect on the building treated. In fact, delicate ornament often disappears under it, and furthermore it destroys

University of Leeds : New Building for the Department of Agriculture.
Mr. Paul Waterhouse, PP.R.I.B.A., Architect. (*See p.* 168.)

the actual gradations of colour (not dirt) the materials take to themselves with age wherein their true beauty lies. Cleaning does not affect this. A flag or a tile or a marble floor does not suffer in beauty through the cleanly housewife.

One of the reasons for the superiority of the usual appeal of Continental towns is that the towns one visits are in a clean atmosphere and can therefore be seen as their authors intended them. If any town in the "dull industrial" areas of our island could be suddenly freed from its stifling mantle of soot and grime the inhabitants would be very much surprised to find that they lived in a much brighter town than they had ever imagined.

I even believe a lot of the ugliness contrived by the speculative builders and the recent use of ugly bricks in otherwise delightfully laid-out housing schemes could be ameliorated if not entirely remedied by the adroit use of colour wash; anyone who knows Holland or knew pre-war Bruges will remember what a charm these bright colours added to the street.

UNIVERSITY OF LEEDS: THE DEPARTMENT OF AGRICULTURE.

ONE of the most important departments of this University is that which deals with agricultural education, for, while the University is situated in a great industrial city, it is also the centre of the largest agricultural county in England. The unsuitability of the premises occupied by the department has long been recognised, and, but for the war, a new building would have been provided some years ago. The erection of this (see p. 167) building is now about to begin. This is made possible by the generous help received by the University from several sources.

As long ago as 1914 plans were prepared for the intended agricultural building and tenders were actually obtained. But, like other building works of that period, the scheme was necessarily set aside. A definite start is now to be made, and a new tender (from Messrs. Armitage & Hodgson, of Leeds) has been accepted. The architect is Mr. Paul Waterhouse, of London. Originally intended for a site on the Woodhouse-lane frontage of the University land, the building has been allocated to a position on University-road, west of the buildings of the textile (clothworkers) group. A good street alignment is here available, and the building will occupy a plot 190 ft. long by 125 ft. deep. The pavement line here falls sharply eastward, but the slope has been taken into consideration, and will be rather helpful than otherwise to the lighting of, and access to, the large basement, which is an important part of the accommodation. While a great portion of this basement is occupied by stores, it also contains a students' common room, a locker room, bicycle racks, and a large machinery room and workshop. On the ground floor the largest rooms are a big lecture room, measuring 50 ft. by 24 ft., a smaller one measuring 35 ft. by 19 ft. (both of these have the auditorium raised in stages), a museum 50 ft. by 27 ft., a library, secretarial offices and various small professorial or class rooms. The Biological Department begins on the first floor, where are to be found a general laboratory and a research laboratory, a staged lecture room as below, research rooms of moderate size, and advanced laboratory, one or two private rooms, and the necessary preparation, sterilizing, store and other rooms. On the second floor are a large students' laboratory, laboratories for chemical-nutrition research, balance rooms (for staff and students), lecture rooms, large and small, and rooms for microscopy and other special purposes. The roof surface is also adapted for out-of-door and greenhouse work, and the staircase is arranged so as to give the most direct and convenient access from floor to floor. The external materials will be stone and brick; owing to the large window areas, these are sparingly used, and the building will depend for its structural strength on a framework of steel. There will be no irrelevant ornamentation.

Annual Distribution of Prizes.

THE annual distribution of prizes and exhibition of work in connection with the Architectural Association took place at the Architectural Association School of Architecture, Bedford-square, W.C., on Friday last week, in the presence of a large company, presided over by Mr. E. Stanley Hall, M.A., F.R.I.B.A.

The prizes were distributed by Mr. Harvey W. Corbett, F.A.I.A., Diplomé Ecole des Beaux Arts, President of the Architectural League of New York; and among others present were Mr. J. A. Gotch, P.R.I.B.A.; Mr. R. Atkinson, Director of the Architectural School; Mr. Michael Waterhouse, A.R.I.B.A.; Mr. H. V. Lanchester; Mr. Stanley Hamp, P.P.A.A.; Mr. Nunn, Mr. Chalton Bradshaw, Mr. Howard Robertson, Mr. W. T. Ching, and Mr. F. R. Yerbury, Secretary of the Association.

In opening the proceedings the Chairman said that by a happy accident of dates the first official duty of a new President of the Architectural Association was to take the chair at the annual prize-giving. On such an occasion it was usual to review the work of the past year, and he would do that very briefly, because they would find the work hung on the walls of the studios, and he most cordially invited their guests that afternoon to see the drawings for themselves and form their own opinions as to their worth. But, if he might be allowed to, he congratulated the students on their high attainment. He thought they would all agree with him, when they saw the designs, sketches, and the working drawings, that they showed knowledge and skill and an individuality that was refreshing. That was what they liked, for they preferred their students to be buses rather than trams, their aim being not only to indicate the destination but to guide the students *en route*. Might he be allowed to offer just one word of advice? The first-year student saw five long years ahead of him, and often thought he had plenty of time, and that there was no need to work too hard. The fifth-year student saw five long years behind him, his architectural equipment more complete—or less—as he had used those years. At the end of those five years, however, they thought what a very short time it had been. At that stage they were supposed to be equipped to start in architecture, and they then possibly reflected that the lecture they had missed might have helped them a bit more. Punctuality, regular attendance at lectures, and such like, were of great help to the school—the staff as well as the students. He felt sure the students would like him to congratulate the staff. A keener and more loyal staff than Mr. Robertson and his assistants no school ever had, and the Council were very proud of them. They recognised, too, the dominating personality of Mr. Atkinson. For ten years he had trained and guided the school with unerring tact and judgment. How much they owed him they could not tell yet, but it was a great debt." Of Mr. Yerbury, their Secretary, he could pay no greater compliment than to say "the Architectural Association—it is he." They wished their late housemaster, Mr. Ching, the very best of luck in his new venture. His departure from the staff was their great loss; might it be his great gain. In asking Mr. Harvey W. Corbett, F.A.I.A., to present the prizes and give his address, the Chairman said that Mr. Corbett was Chairman of the Architectural League of New York, in whose safe keeping was the architectural excellence of that city. Architects in England sometimes looked with envious eyes on America, where more great projects seemed to be carried out in a year than in a generation here. They were not all lucky enough to visit America, but Mr. Corbett had planted a sample of Americans' work in London. The Bush building at the bottom of Kingsway was his work, and when the two wing blocks were added it would be a notable addition to London's architecture.

Mr. Corbett, after distributing the prizes, addressed those present, and said that those students who had not gained prizes must not feel disgraced, as sometimes they were the ones who gained prizes later in life, and that was a very important time at which to have them. He believed that the most important thing for any of them was education. Building a building would amount to very little if they did not carry on the work of education. Ever since he returned from Paris to New York, about twenty-three years ago, he had felt closely interested in educational work, and that it was the duty of every practising architect to give his time and thought to that subject. They could not afford to let such an important matter be carried out by the schools, and they should remember this particular point—when a student finished his course, whatever it might be, he was really only continuing his education, and a practising architect must take that man and guide him and help him to go on with his educational work. The work that would probably interest them most was that which went on in America on educational lines for architects. Of course, the profession of architecture was a very broad one, when they considered that nearly every human activity went on inside a building, and architects were expected to cope with every requirement. Perhaps they thought he would tell them the thing most needed to equip the student as an architect to-day, but during the twenty years he had been teaching his ideas and views had been constantly changing, and if he told them what he thought that day probably in a month's time he should regret it. But he had decided on one point, one test, about architectural education, which could be applied to any architectural school. That test was—were the students interested, enthusiastic, excited about their work, or were they simply being driven along? Some one had defined education as being something that was done to them, but he thought that real education was something which the student did himself, and that the real function and duty of an educator was to inspire his students and pupils with an enthusiasm for their work, and from what he had learned of that Association, and on looking at the faces of the students, he felt that the Association had passed the test of a perfect scheme of education 100 per cent. With regard to the system of individuality, which their President had referred to, that was difficult to develop and follow in America, where conditions were so different. Owing to the volume of work they found it necessary to standardise in their educational work. But whether the student was trained on individual or standardised lines, if he was ready to work 23 hours out of 24 a day, and sometimes 24 hours, ideal result would surely come to that student later on in life. Another point was that in their education work in America pressure was continually being brought to bear upon them to make their course more practical—to train the students in the sizes of bricks and pipe lines—all of which was an essential part of an architectural education but there was a period in life when the possibility of training was better than other times, and that was between 18 and 25. He urged them to develop their imaginative powers and individuality, which would be needed to meet the situations that would arise later on in life.

years went on the architectural conditions of their thickly-populated cities would require the greatest imaginative genius of architects. In the States they had architectural offices of considerable size. Their President had told him he thought it would be difficult to get several Englishmen into partnership as in the States, because each man would think he knew all about it and would not agree with the others. In their big partnerships in architectural practice in America were not only the principals, but also the draughtsmen, which was necessary, because the volume of work covered so great a field that it was essential to have a tremendous co-operative effort to bring about successful results. The work of the Association was the starting point of an architectural educational system which would in time, he thought, cover Great Britain, and he would like to see all architectural schools brought together in some sort of central organisation on the lines of their work in America. In New York they received and judged the work of students throughout the States, even as far distant as San Francisco, 3,000 miles away. The University students joined in these examinations and the work of each student was judged, not only in competition with his own particular school group, but also with all the students of the country, and he thought this was an additional inspiration to the student to do his best. He suggested that all Great Britain should join in the marvellous work they were doing, and on which he heartily congratulated them.

Mr. R. Atkinson, the Director of the School, in proposing a vote of thanks to Mr. Corbett, said he had the pleasure of meeting him in New York last year, and he admired his work over there. It was possible for them to see a sample of Mr. Corbett's work in Kingsway and get some idea of the class of work an American architect turned out. He had been very interested to hear about the work of architectural education in America, which had been so well organised that the architecture now turned out reached a very high level. The universal high level in designs in American architecture to-day was undoubtedly due to their schools. In England they had three or four schools of architecture, and in America about 26, and in England they turned loose on the public about 50 architects every year. American architecture was now certainly in advance of French architecture. The latter was to a certain extent inferior because it was largely "paper" architecture, and the American schools had gone ahead by teaching the difference between "paper" architecture and "building" architecture. He believed that some of the American cities would later be the centres of pilgrimages as Florence was to-day. He did not see why they should not go to San Francisco and New York and study their architectural designs. He thought there were signs that this movement was already beginning, and if it was any criterion, it was interesting to note that the ambition of every architectural student in England nowadays was to work in America for a few years. He attributed the excellence of architecture in America to-day to the fact that American students of the past had studied at the Ecole des Beaux Arts and on return to the United States had spread their views and ideas and learning. In England they had not as yet got that older generation of well-trained architects such as they had in America, but it would possibly come in time. In a reference to the British Empire Exhibition at Wembley Mr. Atkinson said he did not think that the Association had been given the attention due to it in regard to the buildings at that Exhibition, and he thought this matter ought to be drawn to the notice of the Exhibition authorities, who should be informed that there was a group of young architects at that school willing to do something and who ought to be given a chance. He thought their school was now well upon its feet, and the extension of the period of the course to five years was justified, as five years was not too long in which to try to learn sufficient to enable a student to be able to say he was really becoming something of an architect.

Mr. Gotch, President of the Royal Institute of British Architects, seconding, said he was quite sure, although he had not heard the address, as he arrived late, that it was extremely interesting and admirably rendered.

The Awards.

The awards were as follows :—

Public School Entrance Scholarship (value £63).—Miss Betty Scott (Headington School for Girls, Oxford).

Open Entrance Scholarship (value £63).—Charles W. Sully (Municipal School of Arts and Crafts, Southend-on-Sea).

A.A. Essay Prize (Open to all Students) (value £10 10s.).—No competition.

First Year Course.—First Prize, "Howard Colls" Travelling Studentship (value £15 15s.), W. R. Brinton. Second Prize, Books (£5 5s.), C. Green. Hon. Mention (£5 5s.), B. H. R. Murray. Hon. Mention (£5 5s.), W. V. Trubshawe. Hon. Mention (£5 5s.), J. V. Nisbet. Art Subjects (£3 3s.), J. V. Hamilton. General Progress, Books (£2 2s.), Miss N. Nickalls.

Second Year Course.—First Prize, A.A. Travelling Studentship (£26 5s.), R. C. Erith. Second Prize, Books (£10 10s.), E. T. E. Nash. Art Subjects, Books (£5 5s.), R. C. Erith. General Progress, Books (£3 3s.), D. H. Beaty-Pownall.

Third Year Course.—Holloway Scholarship (£300), E. Wamsley Lewis. Scholarship tenable for one year in Fourth Year Course (£52 10s.), F. E. Bennett. First Prize, "Henry Florence" Travelling Studentship (£50), F. E. Green. Second Prize. Books (£21), F. Roscoe. Third Prize, Books (£15 15s.), J. W. Wood. General Progress, Books (£5 5s.), I. E. Tramcourt. "Alec Stanhope Forbes" Prize for best colour work during the year, Books (£5), N. H. Musgrave.

Fourth and Fifth Year.—*Design*: First Prize (£6 6s.), R. E. Enthoven; Second Prize (£4 4s.), The Hon. H. A. Pakington. *Decoration*: First Prize (£6 6s.), John Grey; Second Prize (£4 4s.), R. E. Enthoven. *Town Planning*: First Prize (£6 6s.), Miss I. M. Chambers; Second Prize (£4 4s.), J. C. Shepherd. *Construction*: First Prize (£6 6s.), A. S. Knott; Second Prize (£4 4s.), H. Braddock.

Architectural Association Diploma (on satisfactory completion of Five Year School Course).—Miss I. M. Chambers, L. S. Slaughter, E. U. Channon, L. J. Williams, C. S. Morley, J. C. Shepherd, C. G. C. Hyslop, G. A. Jellicoe, G. H. Crickmay, D. S. Petrovitch.

Medal presented annually by the Société des Architectes Diplômés par le Gouvernement Français to the best Diploma Student of the year.—J. C. Shepherd.

R.I.B.A. "Henry Jarvis" Scholarship (£50).—A. E. Cameron.

A.A. Design Club Prize (£5 5s.).—J. H. Greenwood.

Architectural Association Design Prize, awarded annually, Royal West of England Academy School of Architecture (£5 5s.).—R. H. Brentnall.

Cardiff Technical College: Department of Architecture and Civic Design.

The following awards have been made as a result of the sessional examinations at the School of Architecture at the Technical College, Cardiff. Mr. Paul Waterhouse, F.R.I.B.A., was the external examiner.

Third Examination for the Certificate awarded at the end of three years Full-time Day Course, exempting from R.I.B.A. Intermediate Examination :—

Certificate (with distinction), B. W. Thomas (1st place in design); certificate (with distinction), L. Monroe (2nd place in design); certificate (with distinction), V. L. Nash (3rd place in design); certificate, Miss E. Atkins; certificate, W. O. Oakley (3rd place in design).

Second Examination :—J. B. Wride (1st place in design), A. V. Banks (2nd place in design), E. B. Byrd, F. W. Harper, H. A. H. Bull.

First Examination :—A. C. Light.

THE ARCHITECTURAL ASSOCIATION.

STUDENTS' WORK.

It is again a pleasurable duty to look over the work of the Architectural Association which has been considered worthy of exhibition in Bedford-square. That much good work is being done, and that it largely results from wise and discriminative guidance there can be no question. We still look for more evidence of spontaneity and freshness of vision. The Pump Room, the Council Chamber, the Country House, and the Theatre are all waiting for a little more freedom from the bands of precedent, when the sober Georgian and the dull Renaissance may give way to something more interesting, and when we shall not have to wonder what a student's idea of a prison would be like when we see what he gives us for an abode of pleasure.

In the upper floor gallery are a number of interesting designs. One of the most noticeable of these is the design for a lift tower by the Hon. H. A. Pakington; this is illustrated by a clever drawing, and shows real appreciation of the architectural possibilities of such a feature. One is inclined to hope the designer may some day be able to put his idea into practical use. Another good design for the subject is by R. E. Enthoven. The town-planning schemes show much praiseworthy work in the designs for an Empire exhibition, seaside resorts, and the Horse Guards parade; the latter plan has some excellent points. Such designs for an exhibition building contiguous to the Marble Arch are sufficient to awaken the imagination as to the wonderful possibilities of London development. Charming little drawings illustrate an open-air bathing establishment, by C. R. Hiscock, well proportioned and well laid out. Two other good designs are shown. The Repertory Theatre is best rendered by G. H. Crickmay, broadly and boldly treated and cleverly planned. Some pleasing drawings of a country house are worth noting. The London Club, by R. E. Enthoven and H. A. Pakington, is well thought out; both in plan and elevations these have distinct merit. There is some stateliness of lay-out in the plan by Leslie Slaughter. The house for Capt. Lyle has called forth a good design by R. E. Enthoven, whose elevations are very pleasingly shown. The Council Chamber for a capital city has given rather disappointing results, but the design by R. E. Enthoven is much above the average. The colour schemes do not appeal to us very strongly, but are best where quiet tones of colour are adopted, such as the reds and greys by T. E. Townend, and the pleasant purples and yellows by H. H. Khan.

In the first floor gallery we should single out for special note the Church and Institute by I. Joanna Macfadyen. Designs of merit are shown by D. A. Trimmins, A. E. Cameron and Leonard J. Young. A Concert Hall and Restaurant is illustrated by excellent coloured elevations and plans of a more than usually good design by F. E. Green. One of the best things in the exhibition is the sketch for a Cliff memorial, by D. A. G. Smith the idea of using a cliff or rampart as the basis for a great outdoor memorial is a good one, and it is here very boldly and effectively set forth. Two or three of the Pump-room designs are good, *i.e.*, by Doris A. Lewis, G. H. Smith, and Leonard J. Young. Amongst the life figure studies one of a woman showing the back outlines is exceptionally good.

The ground floor gallery contains a number of highly creditable Roman and Greek compositions of which that by Colin W. Statham is typical of the best for its breadth of treatment, and one by R. Smith for its picturesque quality. The subject of a garden pavilion has brought forth some good designs by D. H. Beaty-Pownall, W. J. A. Osborne, and R. Smith. Some good essays in iron steps, a tomb at the end of an avenue, entrance doorway to a museum, and a pierrot stage add variety and interest of subject.

ILLUSTRATIONS.

New Church of St. Columba, Liverpool.

The illustration of this church in this issue is from the drawing now on view in the Architectural Room at the Royal Academy. The interior is impressive with many well-considered features; the key plan on the view shows the spacious arrangement of the building. Mr. Walter Tapper, F.R.I.B.A., of Melina-place, St. John's Wood, N.W., is the architect.

Uppingham School Memorial Hall.

This illustration is from the original designs of the late Ernest Newton, R.A., but all the details have been made subsequently. The Hall is being built of Welldon stone, and Edith Weston walling. The open timber roof is of Douglas fir, and the wrought ironwork is slightly emphasized with colour and gilding. The new Hall forms, with a new class-room block, two sides of the main school quadrangle. The general contractors are Messrs. Benfield & Loxley, Ltd., of Oxford. Heating and electric light are by Messrs. Wenham & Fowler, of Croydon. Glazing is by The Crittall Manufacturing Co., Ltd., Braintree.

Our illustrations are from this year's Royal Academy Exhibition. Messrs. Ernest Newton & Sons are the architects.

British War Memorial Tablet, Amiens Cathedral.

This tablet was designed and executed for H.M. Government to commemorate the officers and men of the British Armies in France who lost their lives during the Great War, with special reference to those who fell in the battles of the Somme, the defence of Amiens, and the final advance to victory.

It forms one of a series, tablets having already been placed in adjoining piers in the south transept of the cathedral in memory of the Canadian, Australian, South African, and Newfoundland dead. There is also a tablet to the memory of U.S.A. troops, and another has quite recently been erected by the New Zealand Government. The tablet itself is in specially hardened "gesso," moulded, coloured, and gilded; the lettering is in relief and coloured blue, with certain lines of the inscription in gold. The frame, or surround, is of polished Hopton Wood stone—selected as the most suitable British material—the supports and fixings are of bronze.

The memorial (which was recently unveiled by H.R.H. the Duke of Connaught and Strathern, K.G.) was designed by Lieut.-Col. H. P. Cart de Lafontaine, O.B.E., F.R.I.B.A., and was executed by Mr. Reginald Hallward, of 20, Florence-road, Ealing Common, W.5.

Brighton War Memorial.

This memorial, illustrated on p. 175, is situated on the northern enclosure of the Old Steyne, and was designed by Mr. John W. Simpson, PP.R.I.B.A. The whole of the north garden of the Old Steyne has been laid out as a formal setting to the memorial. The treatment comprises a quasi-colonnade of square piers carrying an entablature and frieze without cornice. The colonnade is developed at the south-east and south-west ends as two flanking rose pegolas, which repeat the garden *motif*. At the centre is a small domed shrine facing north, containing an altar table. The colonnade is placed at the north end of a lily pond, and the centre is filled with a carved panel bearing battle honours, with the arms of the borough above surmounted by a mural crown. The work is in Portland stone, and was carried out by Mr. C. Kerridge, junr., of Cambridge. The bronze work and engraving are by Mr. H. Cashmore.

House at Puttenham, Surrey.

This house is situated on the south slope of the Hog's Back. The walls are faced with Messrs. Collier's 2-in. silver grey facing bricks with light red dressings. The roof is covered with red sand-faced tiles. The contractors were Messrs. Musselwhite & Sons, Basingstoke; the grates and mantels were supplied by Messrs. Matthews, of New Cavendish-street, W; the main water supply, consisting of a bored well, pump and engine, was carried out by Messrs. Duke & Ockenden, of Littlehampton. The architects are Messrs. Unsworth & Triggs. Our illustration is from the R.A. Exhibition.

"Combend," Gloucestershire.

This house was originally an old manor house, with a large tithe barn and housing accommodation for the visiting priest attached. The buildings have been occupied from time to time by farmers' tenants and have undergone many changes in the way of alterations—not always with the best result. The building has now been rearranged to suit the present owner. Many recent additions have been taken away, and the building restored more to its original condition. An interesting feature of the alterations is that a portion of the old tithe barn has been utilised to form the large entrance hall, with bedroom accommodation over all contained in the original roof. Messrs. Saunders & Sons, Ltd., of Ashcroft, Cirencester, were the general contractors for the alterations and additions, and Messrs. Samuel Elliott & Sons, Ltd., of Reading, carried out the panelling work to the principal rooms. Messrs. Strode & Co. were responsible for the electric lighting and heating. Mr. A. N. Prentice, F.R.I.B.A., is the architect.

Frescoes in the Memorial Hall, Liverpool.

His Royal Highness the Duke of York, K.G., unveiled these frescoes in the Memorial Hall, Liverpool, on July 24 last. They are the work of Mr. Frank O. Salisbury, and comprise some fifteen pictures, of which we illustrate three, representing "Remembrance," "Immortality" and "Infancy," on page 171. The lunettes are the gifts of the citizens.

Exeter War Memorial.

Earl Beatty unveiled this memorial on July 24 at Exeter. It stands in the grounds of Northernhay, and has a picturesque setting amidst some fine elm trees. At the base are four figures representing the sailor, the soldier, the nurse and the prisoner of war. The figure of Victory was exhibited in the Quadrangle of the Royal Academy in 1922, also the bronze figure of the prisoner of war in the galleries. The sculptor is Mr. John Angel, a native of the city. Mr. Angel carried off many prizes while at the Academy Schools, including the travelling studentship for study abroad.

BOOK REVIEWS.

The Law of Property Act, 1922. *How Will Work?* Practical Criticisms of Parts VIII and IX of the Act. By EUSTACE HARVEY, M.A. (London: Sweet & Maxwell, 1923. 7s. 6d. net).

THIS is a highly technical criticism of Parts I, VIII and IX of the recent Act which purports to simplify the conveyance of Land and the Law of Property, and it will be seen by the question asked on the title-page of this work that the author is, to say the least of it, sceptical as to how in practice that question can be answered in the affirmative. It is, as the author says, an Act of almost, if not quite, record length, and it certainly is one of the greatest complexity; and it is for the lawyer to discover whether or not it attains the object with which it was passed.

The law relating to real property is one of ancient and gradual growth and it depends upon many statutes and much "case law," so its intricacies can only be followed by those versed in the subject. It is always a doubtful experiment to deal with a law which has grown up in this manner by any comprehensive statutory measure, for too often the result is to complicate matters by imposing upon a law well understood by tradition the complications involved in a modern statute. Those interested in this question will doubtless find this criticism of the Act by one well versed in this branch of the law helpful in unravelling its complexities. Criticism by itself when an Act has become law would be futile, but in these pages the author in his criticism considers the working of the new Act and to those who have to construe and put the Act in operation the critical consideration given it in this volume may well be of assistance.

The New Law of Property. Fourth edition of "Topham's Real Property" (an introductory explanation of the law relating to land), showing the changes effected by the Law of Property Act, 1922. By ALFRED F. TOPHAM, L.L.M., K.C. (London: Butterworth & Co. 15s. net).

This is a fourth edition of the author's work on real property, but it is addressed to a particular object, which is the explanation of the changes in the law of real property, which will be introduced when the Law of Property Act 1922, comes into active operation on January 1 1925.

There have been continuous efforts made to simplify the law of real property in this country but probably the Act of 1922 is the most ambitious attempt that has hitherto been made. The lawyer, the student, and the layman can never expect to reap the benefit of such improvements immediately (unless in one sense the lawyers may be said to do so) for, until the new law is established, it has to be read with the old, and thus a double degree of knowledge is essential. The author of this work is well qualified to undertake the task of explaining the effect the new law will have on the existing law not only from his great personal experience, but also as a reader in the law of real property and conveyancing to the Council of Legal Education rendering him conversant with the difficulties of students, and from the fact that he was a member of a sub-committee connected with the reforms inaugurated by the new Act.

The changes that will be effected in the law are indicated in the text, as the author states in the preface, by distinctive type and by a vertical line drawn in the margin. We must confess we do not find the type very distinctive in some instances but the marginal line plac the new matter beyond question, and the is an admirably arranged index showing th old and the new law in vertical columns. Th new statute is so voluminous itself that would certainly have increased the volume b the addition of another 200 pages or so to its pr sent 413 pages, if the text had been include Those who have to master the changes contem plated in the law of real property will certain welcome what appears to be a very concis and clearly-stated treatise on the subject.

THE BUILDING ART: THEORIES AND DISCUSSIONS.—VIII.

By W. R. LETHABY.

THE TWO ARCHITECTURES AND EDUCATION FOR BUILDING.

"*Craftsmanship, we say, rather than art, for the selective power which made things beautiful in form and colour was just the result of intuitive feeling, quite other than the self-conscious art by which in later times men sought for effect.*"—Prof. J. J. Findlay, "Children of England."

In my last part I tried to make clear that modern building as now exercised is necessarily of a different nature from ancient work. Ancient architecture was seen as workmanship, ours is clerkship. This cannot be helped, and for a long time I doubt if it can be altered, but it is quite necessary to know the facts clearly and to

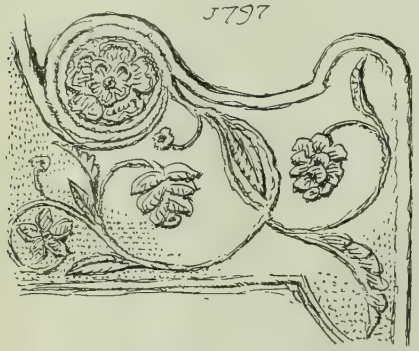

Fig. 1.

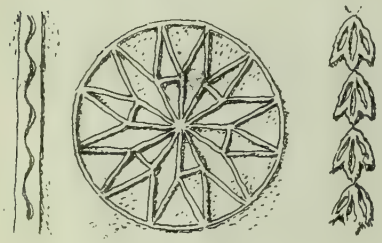

Fig. 2.

arrange accordingly. The things to aim at now are those proper to highly trained expert orderings by middlemen clerks, and our education should be recast to this end. On the point of workmanship art I should like to add one or two sketches to those given in June. After sending off the last part I went to look at the tombs again, and give in Figs. 1 and 2 details of the really delightful "ornamentation" of which I spoke. The relief is very slight, hardly a tenth of an inch, I should think; it is engraving rather than carving—a sort of stone embroidery. The ground is evenly picked all over with a skilful touch, as indicated in patches on the sketch.

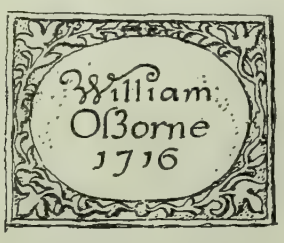

Fig. 3.

Then I passed a wayside cottage, built of local stone, beautifully put together by the customs of masonry, with the traditional mullioned windows, although, as the date shows, it was made in the eighteenth century. The date tablet was just a piece of playful commonsense human work, and may have taken the mason most of a day to do (Fig. 3). Again I went for a little drive to a lovely mediæval church six miles away and found a set of noble nave-arcade capitals. All were different, all rough local workmanship done in much the same way as the later mason's work. In such a place, and wrought in that way, the capital sketched in

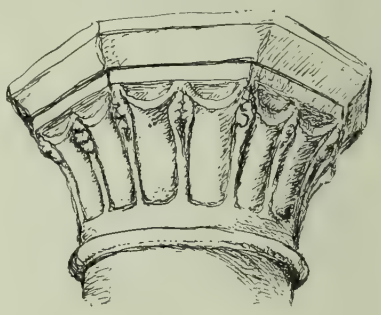

Fig. 4.

Fig. 4 is surely a perfect thing. The mason knew that capitals were done in scallops, but also that that kind were old and rude, and he brightened his up with strong shoots of budding foliage. It belongs to its moment in development and no other. Yet beyond being "Gothic," it is universal, a magnificent example of workmanship art, and it was made in the same way and in much the same spirit as the modern wagons which I talked about before. Art of the old kind may still be seen any day in London in scaffolding. For the most part this is the only art left in city buildings, and it is "removed on completion of the works."

My eye being focussed on the question of workmanship art, I noticed the little old wagonette in which I was driven and I was able to see how very Greek and Gothic it was; that is, it was graceful and natural—not a bit like architects' architecture. It, too, was in the workmanship style, and in its way perfect. You smile, but I looked out over the tail and made a sketch of the cast-iron step to show you (Fig. 5).

First of all it is devised for use; it is light and strong as may possibly be, and the ribbing and dotting of the surface was done for the humble purpose of preventing shoe-soles from slipping. But is it not good; indeed, is it not perfect? Done in this way for service and designed in the material, this again is an example of workmanship art quite akin to the capital wrought seven hundred years ago. So much for my sketches to reinforce the general conception of the two architectures: that of direct workmanship and that of middleman clerkship. I now turn to my American extract.

The day after I had sent off the proof of my last part I received from America a copy of a weekly review (*The New Republic*, June 6, 1923), with an article so nearly akin to what I had been trying to say that it forms quite

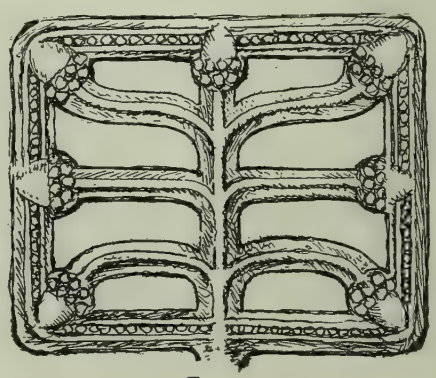

Fig. 5.

a coincidence. Entitled "Beauty and the Industrial Beast," it is written by Mr. Louis Mumford, and I want to make a quotation or two to show what is being thought in America. "If the Victorian designers were mechanical workers by necessity, they were craftsmen in sentiment; they sought to preserve the golden age, even if they could only take a death mask of it in cast iron. This divided purpose keeps even the best products from being clean and logical. *Now the æsthetics of handicraft and of the machine are different things*; and what is a virtue in one department is the opposite in the other. The key to handicraft æsthetics is superfluity. . . . Each worker must elaborate the utilitarian object. The craftsman literally possesses his work. Often elaboration passes the point at which it would give the highest delight to the beholder; nevertheless, the craftsman keeps pouring himself into his job. Carving wood and hacking stone, when it is done with a free spirit and not in servile imitation of some other person's design, is a dignified and enjoyable way of living. . . . A great part of craftsmanship needs no other justification than that it bears the marks of a joyous spirit. When we compare an ideal product of handicraft with an ideal product of mechanical art—say a modern bathroom—the contrasting virtues become plain. The conditions that make possible good machine work are a complete calculation of consequences embodied in a working drawing; to deviate from this calculation is to risk failure. The qualities in good machine-work follow from the instruments—they are precision, economy, finish. Could the workman express anything what would it be but his sense of dulness or his desire to escape? A good pattern in industrialism is one that fulfils the essentials; the 'chairishness' of a chair, the 'washiness' of a basin; and any superfluity is a perversion, and by adding to dull work it defeats the end for which machinery may play a part in society. Craftsmanship emphasises the workers' delight in production. Machine work, on the other hand, stresses the necessities of consumption. In this contrast we have something like a canon of industrial æsthetics; and we can see why it is so futile and perverse to imitate in a mechanical age the objects that were created during the period of handicraft. . . . There is a new kind of beauty to be achieved in and through the machine. In a recent book from Berlin there are photographs of grain elevators, automobiles and office buildings which exemplify the peculiar felicities of machine-work; and if this is exaggeration, it is of a significant fact. A great part of the success of these buildings is the fact that the designer did not model his elevator after a temple or his automobile after a Trojan chariot. Unfortunately, a good part of our machine work is perverted to create fake handicraft and the worker is turned into a servile drudge. We must discriminate handicraft patterns from industrial patterns, and not attempt to carry over into one realm the ideals of another. I do not think handicraft ought to be abolished; on the contrary, it seems to me that if we have driven handicraft out of the city it will return by way of the country and that handicraft may again come into its own, in rotation with agriculture as a seasonal occupation. The consummation of industrial æsthetics will come when our urban apartments, the parlour and the dining-room, are as free from tawdry superfluity as the bedroom and the kitchen. Whether this is a consummation 'devoutly to be wished' depends upon our ability to humanise our mechanical culture."

. . . . .

Students reading these papers may say, "Yes, but after all, when you have to design, how can you do it except by knowing about a 'style' and putting the 'features' together into a 'composition'? That is what we do in our atelier, anyhow." I know that this is so, and all I say is: As much as lieth in you learn about building, as much as you are permitted look at buildings, and as often as you can consider common everyday problems.

When design is approached on paper by the method of the schools you are likely to get such subjects as this: "A prince's palace in

the capital of Ruritania, having an axial approach from the principal 'Place' of the city by a bridge across a river. In front of the palace is a circular colonnade 1,000 feet in diameter, and at the centre is placed a gilt bronze equestrian statue of the founder of the dynasty. Farther on, in front of the great *porte cochère*, are to be four masts, also of bronze and ninety feet high, for flag-waving on occasions of public revelry, which are expected to be continuous. An open *Belvidere* accessible from the *grand suite* of the *Piano nobile* should be provided overlooking the river and in line with the triumphal arch in the centre of the *loggia* on the far side of the *piazza*." I agree at once that such a style-begging problem, set by grave architectural personages for their own listless amusement, can only be played up to by collecting features from books and photographs and making a grand "composition" full of dash and splash, and "going in" for "going to go it." This ideal, however, is purely vulgar; it is of what might be called auctioneers' architecture, and the spirit of it was perfectly echoed in a sale bill I saw the other day and copied: "Magnificently appointed leasehold town mansion, with handsome elevation and carriage drive; rotunda hall with gallery, ballroom, &c., &c. Newly decorated throughout in Period styles. Garage."

Approached from the other end—"the human end"—practical building problems are absolutely different from the airy designing in fairy-land encouraged at architectural schools and societies. In real life solutions are so fully conditioned by data, facts, materials, and economics that the object of true education should be to eliminate visionary whim "designing" altogether, and to substitute demonstration.

If we could know enough of all the facts, and take them in their right order—the requirements, neighbourhood, aspect, materials, labour, cost, and so on—the school view of "design architecture" would be completely pushed out by the thought of making building perfect by being inevitable. In ateliers they not only have to make bricks without straw, they have to design buildings without the bricks; the method is inverted and perverted, and this being so, it is only a mercy that the results are dreary and unreal beyond estimate. But our eyes are holden and we turn the "design" mill faster and faster as hopefully as Tibetan monks spin their prayer wheels.

If we could substitute for this outworn superstition of "architectural design" the discipline of preparing to do work as it should be done, I am sure that the dear old semi-defunct would soon reawake and even move. Seminary and semi-conventual learning about architecture in ateliers, far from the world of building operations, is itself so artificial and dull that it is only made possible by pleasant companionship, talk about Michelangelo, the acceptance of the style myths, the habit of racing the students in competition so that there shall be no time to wonder what it is all about, and periodic fancy dress plays and jazzes. The imperial manner of atelier design, with all the servant-maid talk about *palazzi* and *piazze*, is at most disguised preparation for the kind of fancy-dress show required by department stores and cinemas. The natural way of education in building, as in every other practical art, from farming to sailing ships, is to lead forward in the ways of doing by beginning to do.

Building is a delightful and romantic thing—fresh, vivid, and exciting. In fearless progressive building, both the arrangers and executants would be all the time making discoveries, adopting means to ends, improving, inventing—in a word, living. Moreover, contact would be re-established with the bewildered people, who would soon give sympathy in place of resentment.

In the *Times* the other day was the following enquiry under the heading "City Architecture":—

"Would some eminent architect be so good as to explain why so many buildings in the City have been, and are still being, designed with deep horizontal grooves in the stonework along the front (reaching generally to the first floor) rather than the dignified and smooth-faced buildings which, happily, are a little more in evidence now? Is it to give an idea of strength, or what? These transverse lines detract greatly from the stateliness of the buildings, and divert the eye from taking in the whole structure."

No eminent architect, so far as I saw, enlightened the anxious enquirer, and so I venture to discuss the question here. My answer will sound like irony, but I take it to be just level truth.

1. Parallel sunk grooves in masonry are precisely the very easiest thing a draughtsman with a tee-square can draw. They are also about the most slavish thing a brother man can be ordered to execute, considering the dust, probably worse than picking oakum.
2. Grooves cost a good deal of money.
3. They form recesses to collect soot.
4. The ledges catch the water and make convenient starting places for stone decay.

When tons of stonework have yearly to be removed from the Houses of Parliament it should be obvious that the protection of a building from such decay is a datum of design. "Architecture" should not be associated with stone-rot in either sense of the phrase.

The kind of "architecture" people are waiting to be interested in is suggested by another letter in the *Times*:—

"As one who journeys from town to town to attend meetings, may I suggest that a crusade might begin to improve railway stations? The black dreariness of some of our stations is a thing of marvel to me. Leeds is a notorious example, Leicester a pleasant exception.

Fig. 6.

Fig. 7.

Stations should be an ornament to a town, as so often on the Continent and in America."

While railways are mentioned, I give two illustrations of the noblest piece of modern architecture known to me—the stone-built viaduct at Morlaix in Brittany. This is not a work of taste and style, but one of expert engineering. (Figs. 6 and 7.)

. . . . .

What we need most of all and as a foundation for the details of education is a general conception which will take the place of that mysterious notion—atelier-style-grandeur. I would find this central notion in an idea of perfect structure, the very *spirit of constructiveness*. I spoke before of the mediæval thought of "geometry" as a theory of science of structure and of how this use of the word geometry lasted over the time of Wren. I have lately seen a quotation from Pascal, who was a great mathematician, to the effect that "geometry" was the greatest intellectual study that man might engage in. We require a parallel thought at the present day and we must give a greater content to our thought of building. Building properly is not a mere perfunctory putting things together according to the wordy formulas of out-of-date specifications. *Building* is high activity, experiment, adventure, invention. This desired central idea might be suggested by several phrases: building experiment; structural art; constructive science. We really have to begin to found a developing science of building. That should be the business of architectural societies, but they have been so busy with talking about their likes and "tastes" and opinions, and judging "art" competitions, that the bare notion of modern progressive science of building seems to be offensive to their æsthetic sensibilities. Pre-occupation with style tends to blind us to the solid realities of building, and there is danger that we may cease to see towns and streets and houses and shops, but only paper patterns in pseudo styles. Having found a notion—clear, single and simple—to direct our educational efforts, everything else would easily fall into place, and I need not here try to draw out details and frame time-tables. I may just say that I think an early step would be the joining up with Builders, Engineers, and Craftsmen in the common objective of refounding a human manner of building. What I should really like would be a School of Building common to the lot.

There is even danger that the phrase, "reasonable building," or any other, would be caught up as the denomination of a *style*, and that instead of trying to build *reasonable buildings* we shall set about "designing" in what was *called* "the reasonable style" based on "composing" borrowings from Holland, Germany, and America. We have already made the word modernist mean absurdity, and are quite equal to making reasonable mean imbecility. It is the spirit that matters. The aim to build reasonably, efficiently, durably, even humbly (I am awfully sorry, but everything must begin in humility), has to be put in the place of the superstition of designing vagaries, vanities, and vulgarities, and calling them architecture.

To those who may say that I exaggerate, I have answered: "Look at Oxford Street and Tottenham Court-road; look at Leeds and Bristol." Now, I would add: Look at the country houses in the whim styles now so plentifully pictured in the sale advertisements of the papers. England would have been a richer country if for a century we had practised sound building instead of auctioneers' architecture in the whim and make-believe styles. My notion of architecture is the England of bricks and masonry.

THEORIES AND DISCUSSIONS.

We have received the following from Mr. G. Maxwell Aylwin:—

Sir,—But for your editorial note expressing the hope that "The Building Art" series of articles might provoke profitable discussion, I should not have ventured again to express some of my convictions, which have been a little shocked by these brilliant and consumingly interesting papers. So frequently have I stood out in opposition to Professor Lethaby that I am very loth to give the appearance of a personal vendetta to what is merely a respectful difference of opinion which I retain side by side with gratitude and admiration for his articles.

Of all modern writers upon architecture, there are few who can claim, as a right, such attention as can Professor Lethaby. We have many professors who have added to our knowledge of the past, and he is with them, and no mean comrade. But he is no mere archæologist, for having looked long and thoroughly into the past he has faced about and nows looks ahead with equal patience and thought, thereby gaining a double status of authority. He has written his Pentateuch and now joins the Prophets. He is historian and philosopher, with not only a double status but a dual responsibility. An historian teaching philosophy sets a microscope upon the history he has revealed. An historian teaching philosophy will attract a number of followers on the credentials of his historical knowledge. It is, therefore, of great importance that the philosophy of an historian should be thoroughly examined and freely criticised.

There is a tendency among modern writers to indulge in vague generalities. "Here is the ford," they cry, on the banks of the raging torrent. "Somewhere about here; plunge in and find it." And admiring disciples marvel at such courage, wait to see somebody drown, and, when the time comes for themselves to cross, they seek a bridge. Professor Lethaby is not such a writer. He is not afraid to preach with some definition. Yet for myself (and I am ready to admit that the fault may be within myself) I find many of his points slip through my fingers just when I would grasp them. The apparently clear outline seems, on close inspection, to be a series of dots.

I am reminded of a clever conjurer, who treats us to such witty by-play before discovering a rabbit in the coat pocket of a stout gentleman in the front row. We go home delighted with the entertainment and admiring the skill of the entertainer, but with no false ideas that we have learnt a new way of catching rabbits. I am, in fact, suspicious that some of the rabbits that the professor catches have been brought in specially to be caught. The favourite answers to the pet name of "Style" and is dressed in italics.

Only a few Sundays ago (strange to say the same day upon which I sat down to enjoy "Clerks and Artists") I read in the *Observer* a report of an interview with another professor of architecture who referred to the absence of architectural enthusiasm to-day, citing as a symptom that "There is no battle of the styles." Without echoing the note of regret which appeared to accompany the statement, I cannot help feeling that he is correct in the fact.

Even within my short professional career I can remember when a design that could not be labelled Queen Anne, or Perpendicular, or Louis Seize, &c., was not "respectable," and I am conscious of the gradual disappearance of the "period" design. "Style-tasting" was in fact essentially the sin of the last generation, not of this—and perhaps not so much a sin as an honest groping for pure art after the upheaval of the Gothic Revival—the smashing of tradition. From it is springing the more emancipated work of to-day just as the natural style of the years round about 1800, to which Professor Lethaby refers with approval, sprang from the style-tasting of Wren and Jones and the Adams. Are we to be irritated back into "style consciousness" just when we are losing it?

Now another one—the "free artist." "I would suggest that . . . there can be no decoration which is not vital workmanship, and none should be tolerated which is not by a free artist." Again—"The modern [architecture] is a feat of clerkly organisation—a profession. I have not in mind now anything which I think a fault, but only a question of fact." A fact indeed, and here is another: War was once a thing of spears and shields and muscular blows. Now it is a thing of wireless, and sound ranging, and aeroplanes, and a million other wonders. Battles are now won from G.H.Q. with the help of the courage and obedience of the line. It is not as pretty as the Crusades and does not look so well on the pictures, but it is modern life. The free artist is, in fact, as much out of the scheme of things as the free "Tommy." Discipline allows our millions to live on the land of the mediæval thousands. Wheelbarrows and wagons and old barns and field-gates are the delightful signs of the backwaters of life. But they do not bear us up stream.

What a very few things there are in buildings generally accepted as fine architecture that we could allow ourselves to admire to be consistent with our "free artist" ideas. Perhaps the water-taps, the bath, the radiators, and possibly the doormat, might answer the test of "service, soundness and structure." Of ornament we must have none unless the mason and the joiner can develop the taste for mouldings and decoration. For ten, twenty, a hundred years perhaps, our palaces, our banks, our theatres, our offices must be bare walls with square holes in them—no more. What a heritage for our grandchildren! What a rich page for the architectural history of the twentieth century! Is this really practical politics?

Let us be equally homely in our thoughts upon ornament. I have seen my wife hot-press a transfer upon a dress and from it embroider a pretty spray of flowers. It has, perhaps, just given the right touch of interest to a simple garment. That is ornament. I should be very pleased and proud if she could have designed the spray itself, but should be sorry if, failing the gift, she dressed in sackcloth. Craftsmen have to be craftsmen, even if executing an architect's detail.

Let us try again. Professor Lethaby has a message. To give it driving force he decorates it with very charming language. The words were formed years ago, but from them he can build original sentences. He is the architect, and he uses ready-made words wherewith to build. Is this quite incomprehensible, or does a sentence from President Harding, craftsman of that abomination "normalcy," read better?

My object in so writing is neither a love of argument nor a desire to discourage free thought. It is rather a hint to our professors that the greatest need of our architects to-day is confidence; and the surest source of this priceless quality is encouragement. Tell a man sufficiently often how ill he looks and he will surely take to his bed in time. And conversely there is no tonic so welcome as the assurance that one looks so much better than the last time the speaker saw one.

The unmistakable signs of the birth of the twentieth-century style of architecture, fed by confidence, will bring it into the fulness of life, even in our time, unless it is crushed out of existence by bewildering doubt and misgiving. We have been given a job. It is to compensate for the decay of the free craftsmanship of easier times by a scholarly individuality. It is to compensate for the uniform excellence of the work of many units, by the unity of personal control and direction. The building has to become not so much a gallery of works of art, as in ancient times, as a single work of art to-day. Had we not better get on with the job if we have the opportunity or, failing the latter, give the greatest encouragement mingled with keen criticism to those who are labouring for the very life of our art? It was the pen of Ruskin, as much as any other influence, that perpetuated the confusion from which we are only now emerging.

SIR JOSHUA REYNOLDS' DESIGNS FOR STAINED-GLASS WINDOWS.

By JOHN A. KNOWLES.

Although, according to modern standards of design and craftsmanship we may be allowed totally to disagree with Sir Joshua Reynolds as a designer of glass, his work in this direction must not be forgotten. Sir Joshua's principal work in glass painting was the window he designed for the ante-chapel of New College, Oxford, representing The Nativity and The Christian Virtues. Instead of pursuing the usual method of drawing cartoons on paper, full size oil paintings on canvas were made, and these were copied, not in coloured glass, but on squares of clear glass, painted with enamels by Thomas Jervais, the glass painter, who died in 1801. The work was commenced in 1777, and the first portion of the window, comprising the figures of The Virtues, was completed and publicly exhibited in rooms in Charing Cross two years later, the apartment being darkened so as to show the glass to the best advantage. Walpole quickly saw the futility of this, which he pointed out in a letter to the Rev. William Cole, the Cambridge antiquary. (Walpole's Letters, ed. 1891, vii, 228.) However, in 1783, when the second portion of the window —an adaptation by Sir Joshua of Correggio's "Nativity," in which he introduced portraits of himself and Jervais in modern dress as shepherds—was exhibited in rooms in Pall Mall, even Walpole's judgment became temporarily deranged by the meretricious effect. In May of that year he wrote to Mason: "Jarvis window from Sir Joshua's Nativity is glorious. The room being darkened . . . . the illumination that is supposed to be diffused from the glory has a magic effect." Walpole, however, was quickly disillusioned when he saw the window in place. "Alas," he wrote, "it is just the reverse of the glorious appearance it made in the dark chamber in Pall Mall. I foresaw long ago that Jarvis colours, being many of them not transparent, could not have the effect of old painted glass."

Walpole's opinion, however, was but the voice of Micaiah amongst many more fashionable but false prophets. Chief amongst the latter was Dallaway, who wrote: "In this reign a new style of staining glass has originated, which is the boast and peculiar invention of our own artists. The deviation from the hard outline of the early Florentine or Flemish schools to the correct contour of Michelagnolo (*sic*) or the gorgeous colours of Rubens, is not more decidedly marked than the design and execution of the Van Lings and Prices, and the masterly performances of Jervais." ("Observations on English Architecture," p. 283.)

By such men Walpole's opinion was naturally regarded as heresy, and to maintain their views they, in the manner of the time, fell back on abuse. Even Walpole's love of collecting stained glass, of which he had got together some wonderful examples, was made the subject of attack. One writer said of him: "His mind as well as his house was piled up with Dresden china and illuminated through painted glass"; and Dallaway, stung to the quick at Walpole's criticism of Sir Joshua's Virtues as "washy," wrote an attack in which he stated that Walpole "was so enamoured of his Flemish histories and rich mosaics" (as stained glass executed in the mediæval manner was termed at that period) "that he was blind to the perfection of the new school of glass staining." Courtiers and place seekers were loud in their praises of the new manner. Fanny Burney (Madame D'Arblay), who was evidently an early example of the "lily and poppy" school, whose insincerities and affectations were laughed out of court by W. S. Gilbert in "Patience," and exposed in plays such as "The Colonel," pretended the sight of the window was alone sufficient to ward off an impending fainting fit, brought on by the fatigue of standing at a Court function, though less sensitive souls would no doubt have recommended the use of a smelling-bottle for the purpose. Miss Burney, however, imagined that "the beautiful window of Sir Joshua Reynolds and Mr. Jervis (*sic*) in New College would alone have recovered me, had my fatigue been infinitely more serious." ("Diary and Letters of Madame D'Arblay (Miss Burney)," 1786.) It is extremely doubtful, however, whether Miss Burney ever actually saw the window at all, as she was far too short-sighted.

Thomas Warton, the Poet Laureate, wrote a poem entitled "Verses on Sir Joshua Reynolds' Painted Window in New College," couched in the florid and extravagant language which so frequently at that time passed for poetic inspiration, in which, amongst much of the same sort, the following lines occur:

"Ah! stay thy treacherous hand, forbear to trace
Those faultless forms of elegance and grace!
Ah! cease to spread the bright transparent mass
With Titian's pencil o'er the speaking glass."

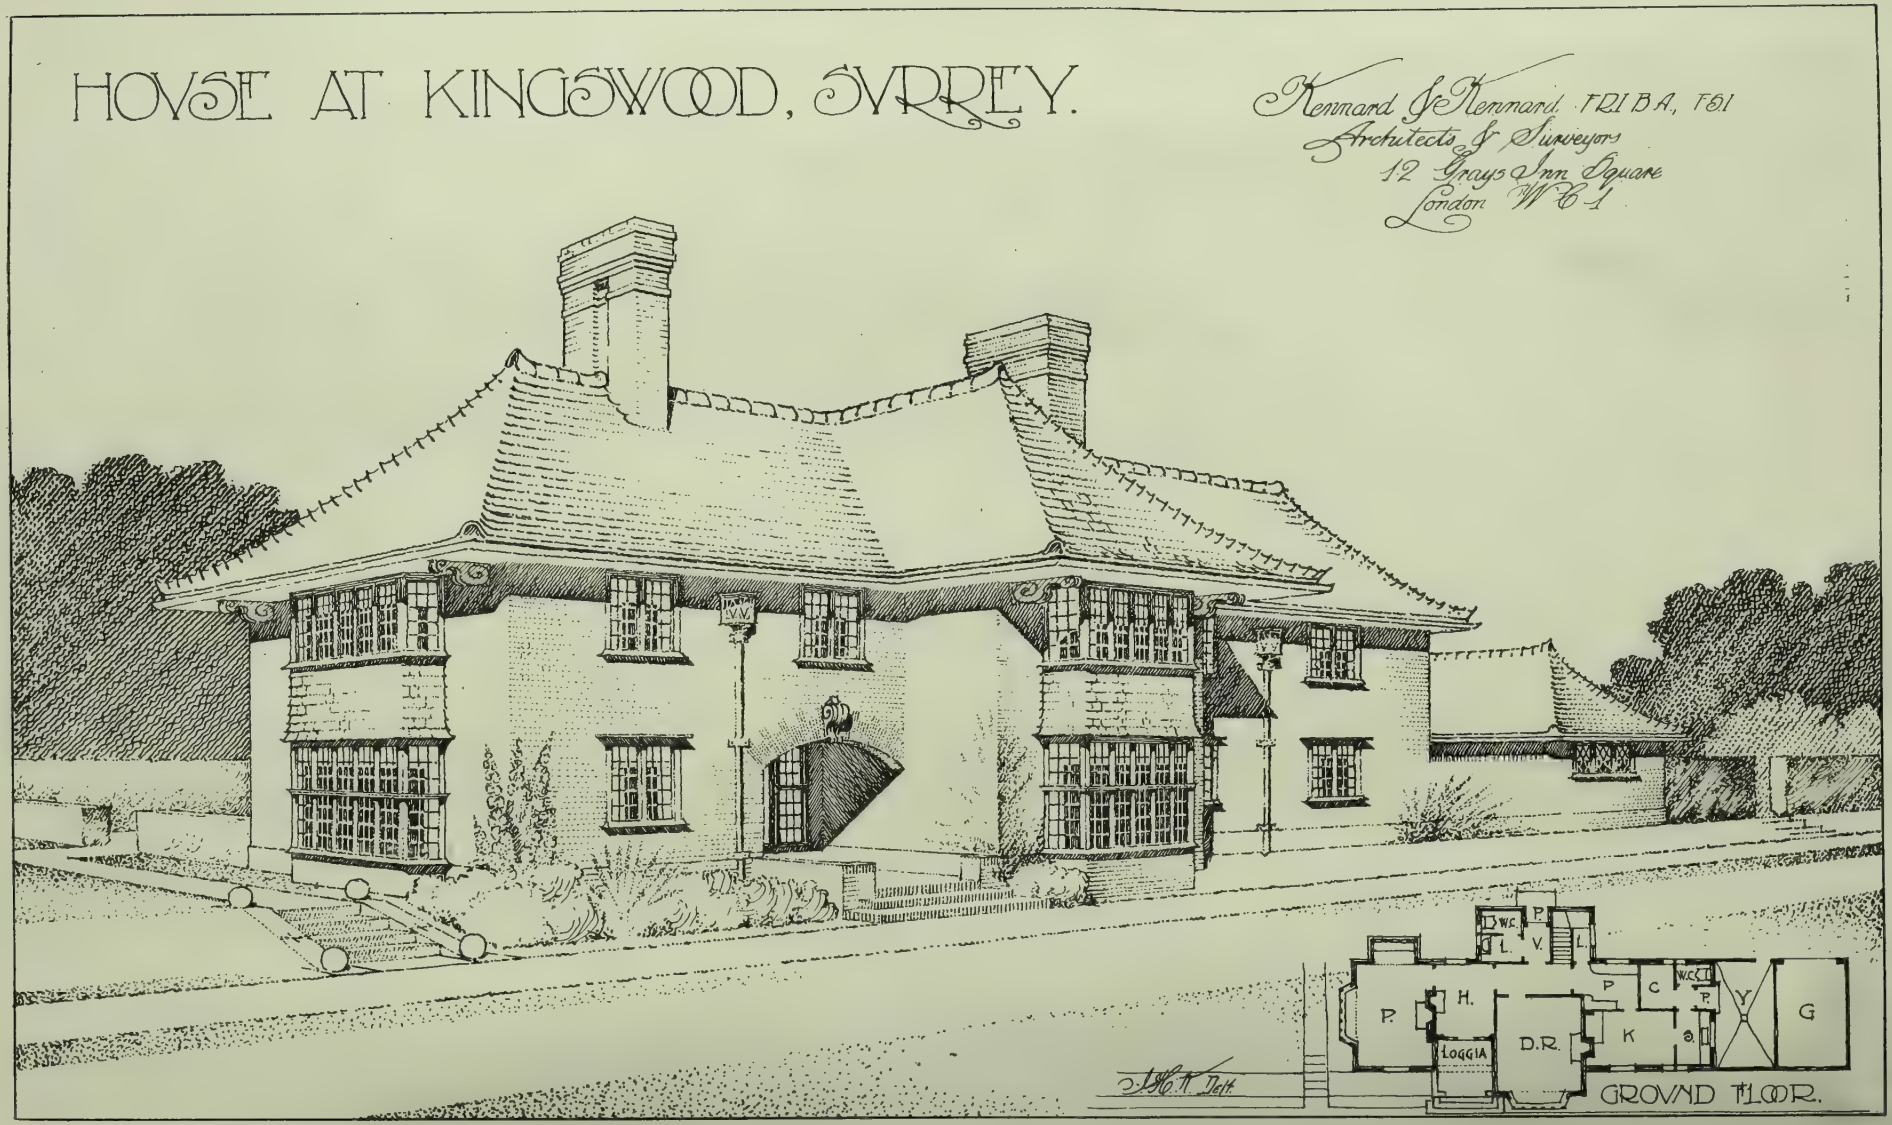
Reynolds, however, was a man of too sound judgment and well-ordered mind to be moved by these flattering tales. Neither the insincerities of persons at Court nor Warton's poetical gush could upset the even balance of his mind. Humbug he detested, and persons who affected to admire what they were incapable of understanding would appeal to him but slightly. Condemning those who went into raptures over the works of Raphael, with which, as he was candid enough to admit, he himself was at first disappointed, he said: "I found that those persons only who, from natural imbecility, appeared to be incapable of ever relishing those divine performances, made pretensions of instantaneous raptures on first beholding them." He told Warton flatly that he was not sincere in his professions. "I owe you," he wrote, "great obligations for the sacrifice you have made, or pretended to have made, to modern art; I say pretend, for though it is allowed that you have, like a true poet, feigned marvellously well, and have contrasted the two different styles with the skill of a connoisseur, yet I may be allowed to entertain some doubts of the sincerity of your conversion." As a glass painting the window was a failure, and Reynolds knew it. At a later date he wrote: "I had frequently pleased myself by reflecting, after I had produced what I thought a brilliant effect of light and shadow on my canvas, how greatly that effect would be heightened by the transparency which the painting on glass would be sure to produce. It turned out quite the reverse."

Both Reynolds and Jervais were well paid for their work. For the whole of the upper compartment, representing The Nativity after Correggio, Jervais received £1.100 for the glass painting, and Sir Joshua £231 for the use of the cartoons which remained his property. For the single figures of The Christian Virtues Jervais received £50 each; £70 for the group of Charity, and £8 extra for the lion's head in the figure of Fortitude. The Nativity painting Sir Joshua sold to the Duke of Rutland for £800, and it was subsequently destroyed in a fire at Belvoir Castle. The Duke of Portland had some of the accompaniments bequeathed to him by Sir Joshua, and the Marquis of Thomond the others with the seven single figures. Farington, in his Diary for April 30, 1809, said that Lady Thomond "spoke of selling the Eleven pictures by Sir Joshua Reynolds painted for the New College Window & said she wd not take less than £5,000 for them." They were sold in 1821 and actually fetched over seven thousand pounds, as shown by the following note in a scrap-book now in the possession of the writer, which was compiled by Thomas Wilmshurst, the glass painter, whose window representing The Field of the Cloth of Gold, measuring over 20 ft. square, was destroyed in a fire at 15, Oxford-street, where it was being exhibited in 1832.

"The following are (*sic*) the original Designs for the Compartments of the Window of New College, Oxford:—

Portraits of Sir Jos. Reynolds and Jarvis as Shepherds at the Nativity	Ld. Fitzwilliam	£430 10
A Peasant Girl and Children with a Torch	M. Zachary, Esq.	£420 0
A Shepherd Boy and Dog with a ruined Column in the front ground	Ld. Fitzwilliam	£630 0
Young St. John and the Lamb	Danby	£183 15
Charity	Ld. Normanton	£1,575 0
Faith	,, ,,	£420 0
Hope	,, ,,	£682 10
Temperance	,, ,,	£630 0
Justice	,, ,,	£1,155 0
Fortitude	,, ,,	£735 0
Prudence	,, ,,	£367 10
		£7,229 5

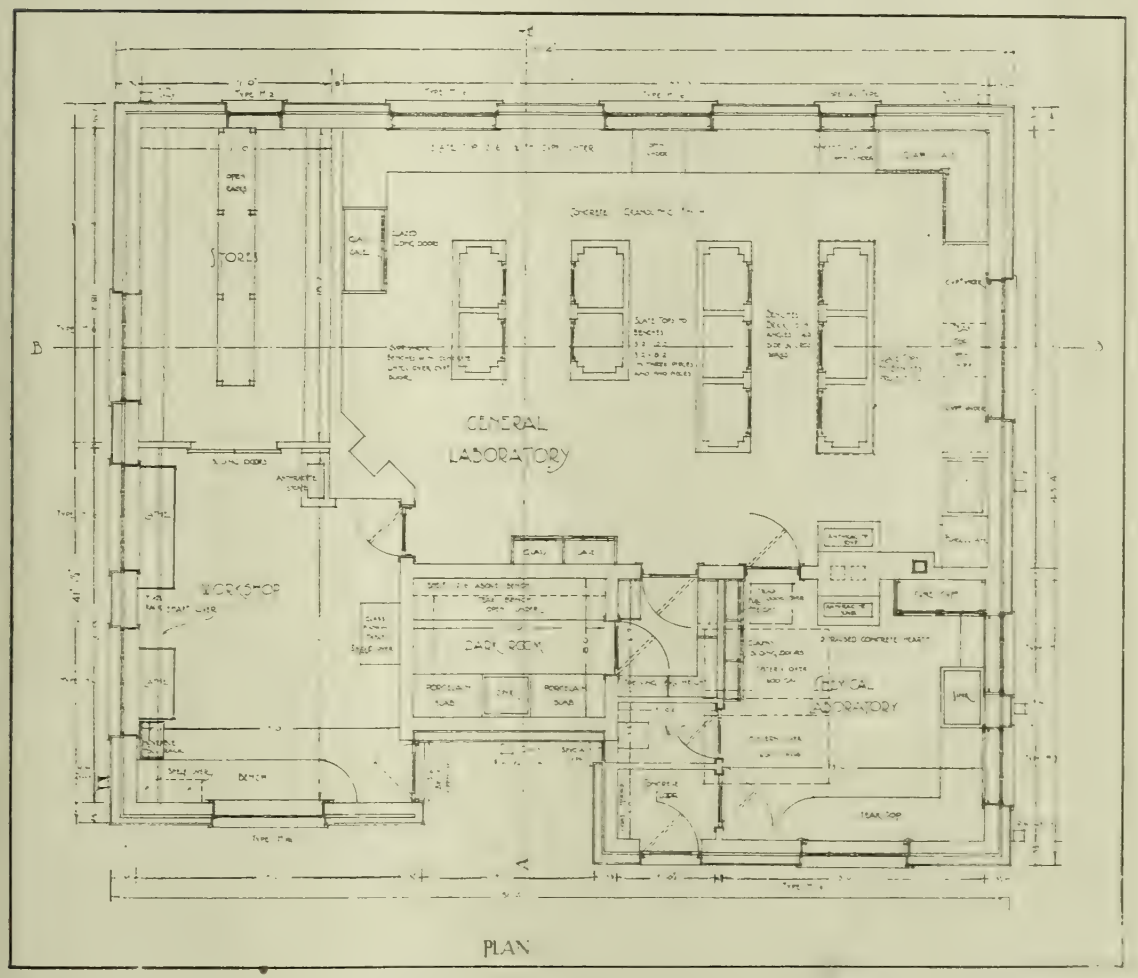
There is a spirited sketch for the group of Charity, slightly different from the one which was subsequently used, in the Ashmolean Museum at Oxford.



The New College window was not the only work of Sir Joshua in glass. For Salisbury Cathedral he did the Resurrection in the lancets of the Lady Chapel, the painting on the glass being done by Francis Eginton of Birmingham (1737-1805). This window was removed some sixty years or more ago. For Lichfield Cathedral the same artists executed a Resurrection, no doubt a replica of the Salisbury window. Carter, the architect and antiquary, writing to the *Gentleman's Magazine*, tells us that when he visited the Cathedral in 1801 he found that the Dean and Chapter, in order "to give an effect like some exhibition transparency" to Sir Joshua and Eginton's window, "had darkened all the surrounding ones." This window cannot have been in place many years, for in 1802 the eastern windows were filled with the present beautiful glass from Herkenrode Abbey. In Holy Trinity Church, Hull, at the base of the east window, there were three beautiful panels executed about 1835 in a combination of enamels and coloured glasses from Sir Joshua's cartoons of Faith, Hope and Charity, probably by Messrs. Hoadley & Oldfield, glass painters of some note in their day. These panels, very instructive as examples of the return to sounder principles, have unfortunately only recently been removed.

Earl Haig's Appeal for Ex-Service Men.

In an appeal on behalf of ex-service men of all ranks issued from the offices of the British Legion, Earl Haig says: "It is now nine years since the incident of a scrap of paper roused the indignation of all honest-minded men and the Empire went to war. Can we yet claim to have fulfilled the solemn promise to do our duty honestly to those who fought for us? About 5,000 ex-officers are still in search of work, 100,000 wholly or partially disabled ex-service men still forced to look to charity to supplement exiguous pensions, 400,000 men capable of work but unable to obtain it, supply the answer to that question. Cheques should be crossed "Barclay & Co.," and sent to 26, Eccleston-square, London, S.W. 1."



HOUSE AT KINGSWOOD, SURREY.

Kennard & Kennard, FRIBA, FSI
Architects & Surveyors
12 Grays Inn Square
London WC 1

[This house, which is now in course of erection, stands on a site of 1 acre. The accommodation comprises: Ground floor—Hall, dining-room, parlour, pantry, larder, kitchen, scullery and usual offices, and garage. First floor—Five bedrooms, bathroom (hot and cold), and tank and airing cupboard. The builder is Mr. J. E. Whiter, of 89, Newington Butts, S.E.]

Laboratory at Winforton. Mr. M. Waterhouse, A.R.I.B.A., Architect.

[This private laboratory was recently erected at Winforton, Herefordshire, for Mr. T. R. Merton. By the use of "Poilite" pantiles a roof of lighter construction over a large span was secured. The tiles in question look like ordinary pantiles from a distance and give a pleasant appearance.]

THE SURVEYORS' INSTITUTION.

WORK OF THE QUANTITY SURVEYOR.

On the 27th ult., at the Surveyors' Institution, a meeting was held, mainly of teachers in building and allied subjects from all parts of the country, who are visiting London under the auspices of the Board of Education. Mr. Hugh Davis, of the Education Department, was present. There was a good attendance. Mr. Lawrence, the Chairman of the Quantity Surveyors' Committee, presided.

Mr. F. H. A. Hardcastle read a paper on the Standard Method of Measurement and the Work of the Quantity Surveyor. Mr. Hardcastle said the quantity surveyor was little known to the general public, but he played an important part, as was well known to experts, in connection with building matters. His function came in between the preparation by the architect of the drawings and specifications, and the making of a contract with a builder for the work. There had been evolved in regard to the dozen or more trades which made up the building industry a more or less recognised method of measurement of completed work, and a customary form of expressing the result. To this experts were able to affix the prices current at any given time. The whole of the work in any completed building having been measured and thrown into form in a bill, if an agreed complete schedule of rates or prices existed, it was simply a question of arithmetic to ascertain the total cost. That method was from time to time followed, and it had many advantages, one being that the building owner paid exactly for what he received and no more. It had, however, one signal disadvantage, viz., that the amount of the cost was not known until after it had been incurred. In practice, the person financing the erection of a building usually desired to know the probable cost beforehand. A bill of all the work required in the building in question was therefore prepared by the quantity surveyor, but, instead of representing completed work it represented measurements from drawings of contemplated work. That was the difference. It was pretty clear, therefore, what was required of the quantity surveyor, whose office it was to compile the bill. He had to be familiar with every process in every one of the trades concerned in the erection of the building, and in imagination went through all the work involved, from the cutting of the first sod in the virgin earth, down to the application of the last coat of paint. He must, in fact, put himself mentally in the position of the builder asked to give a price for the work, and to convey in his bills, in a recognised form, all the information requisite and available; and that included not only the quantities of labour and materials, but also particulars of conditions of contract, and indeed all matters that affected the price. This done, the bills were printed and sent out to a number of builders, who were invited to tender in competition. Competition was the rule, indeed, he believed, in most cases. Local authorities, for example, were required by law to invite tenders from the whole of the public in what was termed "open competition." Competition had, he knew, been much attacked; indeed, one school of social philosophers affirmed that competition, theft, and war were all in principle the same. Competition, however, had its merits. It tended to tune up enterprise, and to give its legitimate advantage to ability in management. He remembered speaking to the builder of a large public building a few years ago, and congratulating him on the visible growth of the work despite all the talk at the time of the slackness of the workmen. He (the speaker) said: "You have no reason to complain of your bricklayers; how do you manage it?" and the builder replied: "Oh, two or three things. We have eight or ten leading hands distributed amongst them, we have plant that makes them comfortable at their work, and we have four Scotch cranes that keep them amply supplied with material. The moral effect of that last point is great." Was it not natural, was it not right, that the man who handled his work in that manner should reap the advantage of his ability? They would, therefore, have competition. There was, however, much waste of effort in competitive tendering. A varying number of firms, from three or four up to as many as 20, by the expenditure of skilled and costly labour prepared estimates for a piece of work. One got it, or might get it. The labour of all the rest was thrown away. That waste of effort should be minimised. Moreover, estimates were usually prepared with great rapidity. There was no more overworked set of men than builders' estimating clerks. They were sometimes seen pricing a bill of quantities on their lap in the Tube! The whole process of setting on foot a building enterprise, indeed, furnished an example of what they knew in physics as "accelerated velocity." When the solicitors on both sides had finished their leisurely operations and the land was conveyed, the pressure began. The client could not comprehend the delay in the simple matter of completing a few drawings, &c., of what he had settled to have done. The surveyor was urged to use the utmost dispatch in taking out the quantities. Indeed, after a practice of 40 years he could count on the fingers of one hand the occasions when they had not had to work late hours at the office. The lithographer also habitually worked late to get the bills printed, and lastly the builders were commonly allowed four or five days in which to prepare their tenders, when a fortnight's time would not be any too much. The quantity surveyor was paid by a commission on the cost. The inefficient surveyor, and the man who took no pride in his work, but whose one idea was to reap the greatest monetary reward with as little labour as possible, was under great temptation to content himself with a series of sweeping, inclusive items which did not really represent measurement at all. He was once shown a bill of quantities for a country mansion to cost about £35,000. In it was a wainscot oak staircase 4 ft. 6 in. wide and going up two stories. It was given in the bill as "No. 1 staircase," followed by a description of the treads and risers, the strings, the handrail, the balusters and the newels—in point of fact, a page copied from the specification, and ending with the well-worn and useful term "complete." In like manner the dormers in the roof were given as "No. 6 dormers," including casements and frames, glass, leadwork, and plastering, also "complete." In this case the quantities were taken out by the architect for the job, and the top commission of 2½ per cent. was charged. An instance like that, by the way, supplied an additional reason for the employment of an independent surveyor, as was remarked from the bench by the late Lord Russell of Killowen (in Terromé *v.* Scott). No architect would for one moment tolerate from a surveyor such work as that. Another danger was the opposite one of over-elaboration, which was analogous to what was often observable amongst children, a desire to "show off"—to introduce a number of separate and additional measurements of labour, &c., which had hitherto been considered as included in general items. This was also mischievous, though less so than the other method, if method it might be called. There was, too, a constant pressure in that direction from sub-contractors. It was now not an unusual thing to sub-let slating and tiling, constructional steelwork, plastering, glazing, and plumbing. The consequence was that each of those trades regarded its operations as the centre of the universe, and was incessantly busy in urging fresh sub-divisions and fresh labours, on the general principle of getting more money for the same thing by virtue of calling it by a different name. Amongst the most ingenious were the slaters, of whom it had been wittily remarked that they now demanded a lineal item in the measurement for beginning and another for leaving off. In view of the foregoing considerations it was not surprising that the attention of the profession and the trade had of late years been drawn to the necessity for uniformity of method, and a joint committee of surveyors and contractors was constituted to draw up an agreed standard method of measurement of building works, the necessity for which surely needed no arguing. That committee, of which he had the honour to be chairman, had completed its labours, and the resulting volume had been published jointly with the authority of the Surveyors' Institution and the Federation of Building Trades Employers. It had also received the approval of the Royal Institute of British Architects. He felt some pride as a surveyor in noting how little that complete and agreed document differed from what had been the practice of the leading surveyors for many years, a practice built up by the great surveyors of the past—Hunt, Gardiner, Rickman, Steward, Strudwick. It spoke well for the care and the fairness with which they did their work. It was also evidence of something else—the moderation and the common sense of the contractors who sat on the Committee. There had thus now been supplied a standard by which the work of the quantity surveyor might be tested, and in consistently following which the reproach might be removed that the estimator was often left in doubt as to the precise meaning of the items he was called upon to price. It remained to be proved whether there would be found in the trade sufficient solidarity and public spirit to enforce its general application. He was glad of that opportunity of addressing a body of men who were engaged in advanced education, and who took interest in the science of building, a subject which touched them all, and which was one of the chief industries of the country. A considerable number of young men passed through their hands every year who would earn their living in connection with that industry in some capacity. A sound knowledge of the mode in which building work was measured and the result expressed for the purposes of commerce, would do no harm even to the artificer, while to the surveyor or the builder and his estimator such knowledge was essential.

Mr. Hugh Davis warmly thanked the Institution for receiving the visitors, and Mr. Hardcastle for his paper. He quite concurred in the necessity for a standard method of measurement and for all persons concerned in any capacity with building matters being thoroughly familiar withit.

The usual votes of thanks were passed, after which the visitors were entertained to tea, and were taken over the Library, the Forestry Museum, and other interesting parts of the building.

AUCTIONEERS' AND ESTATE AGENTS' CONFERENCE.

At the Conference of the Auctioneers' and Estate Agents' Institute, held in Bristol, the Secretary (Mr. E. H. Blake, C.B.E.) gave an address on the Rent Acts. He said that in the past as many as 95 per cent. of the houses were provided by private enterprise. House property used to be looked upon as a sound form of investment, and money flowed freely towards it. The building of houses was a legitimate business, and was formerly a great industry. Although the position was getting a little easier, the problem would not be solved until full decontrol took place and the confidence of the investor in this class of security was restored. Only then would houses be built in sufficient numbers for houses to compete for tenants, and for the law of supply and demand to operate in the regulation of rents. Mr. Blake said members of that Institute were the usual intermediaries between landlords and tenants, and who often acted as the advisers of those who have in the past been accustomed to invest their money in the development of estates for building purposes. A study of the speeches of the Minister of Health during the passage of the Rent Bill, 1923, showed that the Minister was satisfied that the solution of the problem lay in private enterprise. State subsidies would have no substantial effect in overtaking the shortage. The Rent Bill would become an Act within the next few days, and it was clear that control was to remain for some time to come. It would be well for those intimately concerned in the administration of the Rent Acts to face the facts and note carefully how the law was proposed to be remedied as from the end of this month.

QUANTITY SURVEYORS' FEES UNDER HOUSING SCHEMES.

The following General Housing Memorandum (No. 64) with regard to fees payable to quantity surveyors in private practice for work in connection with the settlement of contractors' accounts for State-Aided Housing Schemes has been issued by the Health Ministry. The terms set out in the memorandum have been settled in agreement with representatives of the Surveyors' Institution, and were confirmed at a special meeting of Quantity Surveying members of the Institution :—

Questions of difficulty have arisen between the Ministry of Health and the Surveyors' Institution regarding the application and interpretation of paragraphs (*d*) (*e*) and (*f*) of Part II of General Housing Memorandum No. 31 in individual cases. After exhaustive discussions between the Department and the Surveyors' Institution, it has been agreed that to obviate arguments and disputes the following statement should be substituted for paragraphs (*d*) (*e*) and (*f*) as representing a reasonable application of those paragraphs as a whole. It must be understood that the terms of this statement are an agreed compromise between the Department and the Institution on the various points of difficulty arising under the three paragraphs rather than an agreed interpretation of individual paragraphs and must be accepted in entirety.

II (*d*) Variations—Measuring and making up account of variations consequent upon alteration in design including foundations :—1½ per cent. upon gross amount of additions . 1 per cent. upon gross amount of omissions.

The charge shall be calculated on all additions and omissions brought into account (except that no charge shall be made in respect of any item of omission which is taken bodily from the Bills of Quantities and does not necessitate reference to dimensions or abstracts). It is assumed, of course, that the Surveyor will adopt the most economical method of arriving at the adjustments.

II (*e*)—Adjustment of contract price consequent upon changes in cost of labour and checking and considering claims in respect thereof.—A fee of 1½ per cent. will be payable upon : (*a*) The difference between the amount of the wages payable at the rates specified in the contract and the amount of the wages paid at a higher rate, and also on (*b*) the difference between the amount of the wages payable at the rates specified in the contract and the amount of the wages paid at a lower rate.

II (*f*)—Adjusting contract price consequent upon changes in cost of materials and checking and considering claims in respect thereof. Where this work is done by the Surveyor, a special fee is to be arranged, not to exceed ½ per cent. in respect of the first 100 houses upon the gross cost of the materials dealt with, and ¼ per cent. in respect of any number of houses beyond the first 100 upon the gross cost of the materials dealt with. In the event of any difference as to the amount to be charged for this work, the difference is to be determined by the Minister of Health, whose decision shall be final. The fee should be taken at ½ per cent. in respect of the first 100 houses and ¼ per cent. in respect of the remainder, and applies to materials purchased in the open market. It can also be regarded as applicable to materials supplied through the Director of Building Materials Supply provided that all the work in connection with claims for those materials has been undertaken by the Surveyor, viz. : (*a*) ascertainment of the amount of goods supplied to the contractor through Director of Building Materials Supply or the Local Authority ; (*b*) ascertainment of value of the goods at nominal (schedule) rates ; (*c*) preparation of statements of accounts of amount due by the Local Authority in respect of materials supplied by Director of Building Materials Supply and of the railway carriage accounts paid by the contractor.

If the above items have been only partially undertaken by the Surveyor the fees should be reduced proportionately. In such case the Local Authority should communicate with the Ministry stating the facts of the case.

OPTIONS TO PURCHASE.

The case Rider *v.* Ford (*Weekly Notes*, March 24) again draws attention to the law relating to options to purchase contained in leases. The plaintiffs in the action were builders, and had entered into an agreement with the defendant to build a house on the terms contained in the following letter, from which we give the material passages : "The whole matter, therefore, stands thus : The house to be built on the plot of land adjoining Mr. Watts in accordance with the plans and specifications prepared by Mr. May (which we had better both sign) and to be completed as nearly as possible by Christmas next. You to take the house for 3, 5, or 7 years at the rent of £147 per annum and to have the option of purchasing either the freehold for £2,900, or a lease of 97 years (ground rent £20) for £2,400. If you will send us a letter accepting these terms it seems to us this will be all that will be necessary." By a letter dated June 12, 1907, to the plaintiffs' firm, the defendant confirmed the above terms.

Under this agreement the defendant went into possession March 25, 1908, and after the expiration of the seven years continued in possession as a tenant from year to year, but on May 26, 1922, the plaintiffs served on the defendant a notice requiring him to give up possession on March 25, 1923. The defendant then claimed to be entitled to exercise the above option as he was still in possession of the premises with the consent of the plaintiffs, who, he said, had never called upon him to elect whether he would exercise the option and he had done nothing to abandon it.

It will be observed that there were here two options : to purchase the freehold, "or a lease of 97 years"—and it is important to notice that the Court construed this latter option not as an option to "purchase" a lease, an expression which it said was inaccurate, but that the meaning was that the defendant was to have an option of obtaining a demise of the premises for a term of 97 years. The Court held an option continues as long as the relationship of landlord and tenant continues in spite of the fact that the original term, as in this case, has expired. Moss *v.* Barton (1866, L.R. 1, Eq. 474) and Buckland *v.* Papillon (1866, L.R. 1, Eq. 477) were the cases cited to support this proposition, but then there was the law against perpetuities also to be considered. As regards the option to purchase the freehold, the Court held that would offend against the rule of perpetuities unless the agreement could be read as giving only an option to the defendant personally or to his assignee conditional on it being exercised in the defendant's lifetime, and the agreement could not be read as so restricted. But a covenant for the renewal of a lease as the Court held was outside the rule against perpetuities, and the Court therefore held that this option could be exercised.

It must, however, be particularly observed that the option in this case contained no limit of time within which it must be exercised. If there is such a time-limit it must be noted the option must be executed within the time prescribed, as was held in the case *in re* Leeds and Batley Breweries and Bradbury's lease (1920, 2 Ch. 548) a case which will be found noted in our columns September 24, 1920, under the title Bradbury *v.* Grimble & Co., Ltd. There, at the expiration of a lease of seven years, the tenants were continuing on from year to year, and had done so for eight years, when they attempted to exercise the option. The option, however, was to be exercised "at any time six months before the expiration of the lease," and it was held it could not be exercised in the above circumstances.

The cases are a little difficult to reconcile, however, for in Bradbury's case part of the reasoning of the Court was that where a tenant holds over, only those conditions of the lease remain operative that are consistent with the tenancy from year to year ; and the option to purchase was not consistent with the yearly tenancy since an exercise of the option would put an end to the tenancy.

The fact, however, that in Bradbury's case the option had to be exercised at a fixed time, i.e., six months before the expiration of the lease, differentiates the case from the present where the option was not restricted in any way ; and in Bradbury's case the finding we have mentioned above would appear hardly necessary, the time being fixed in relation to the lease and not the "tenancy." We may also point out that Bradbury's case was considered by the Court in the case we are now considering, and it was distinguished by the Court very much on the grounds we have indicated—that the time was fixed in relation to the term. We may notice one other observation of the Court in Rider's case. The Court pointed out that in regard to the option to take a fresh lease of the premises on new terms (being the case here), the position of a tenant who held over was in principle the same as that of a similar tenant in regard to an option to obtain a fresh lease on the same terms as the old lease, and there was no reason why the law of perpetuities should not be applied in the same way to either case.

RENT ACT: INCREASE IN RESPECT OF RATES.

A decision has been delivered by a Divisional Court in the recent case, Smith *v.* Lloyd (*Weekly Notes*, June 23), which we find a little difficult to follow in the short report. The action was brought by a tenant to recover rent which he alleged to have been paid contrary to the Rent Act. In May, 1918, and again in May, 1919, the landlord had given notice of increase in rent to meet the increased rates paid by him. Judgment in the Court below had been given for the tenant, but on this appeal the landlord only raised a question as to sums paid from January 2 to July 2, 1920, that is, in respect of a period before the Rent Act 1920 came into force.

Now the Act of 1915, by section 1, subsection (1), paragraph iv, enacted that an increase in rent to meet an increase in rates should "not be deemed an increase of rent for the purpose of this Act," therefore, *prima facie*, it would not be rendered irrecoverable under that Act by the landlord. The Divisional Court, on the authority of Newell *v.* Crayford (*The Builder*, April 28, 1922) and Kerr *v.* Bryde (*The Builder*, January 26, 1923), appear to have held that before this increase in rent could be demanded a notice to determine the tenancy must have been given.

The above cases were decided under the Act of 1920, and the necessity of notice was introduced by section 3, subsection (1), which provided that nothing in that Act shall be taken to authorise an increase in rent except in respect of a period during which but for the Act the landlord would be entitled to obtain possession. The difficulty is that the Divisional Court appears to have held that the sums were irrecoverable by the landlord under the Act of 1915, but perhaps the explanation lies in section 14 of the Act of 1920, which is also referred to by the Court in the note of the case. That section provides "where any sum has, whether before or after the passing of this Act, been paid on account of any rent being a sum which is by virtue of this Act, or any Act repealed by this Act, irrecoverable by the landlord the sum so paid shall be recoverable from the landlord."

Now by the Act of 1920 the sums in question would have been irrecoverable by the landlord as having been made during the subsistence of a tenancy owing to lack of notice and the retrospective effect of this section may account for the finding that the sums were irrecoverable under the Act of 1915, but under the latter Act it was always doubtful whether any permitted increases could not be made without notice to quit, and the matter was only set at rest by section 3, subsection (1) of the Act of 1920, with the result that the Act relating to notices to quit has had to be passed this year. The point raised in this case is difficult, but it is hardly likely now to recur.

THE BUILDING TRADE.

BUILDING EXAMINATIONS.

By W. J. STONE, M.R.S.I.

In *The Builder*, dated July 13, 1923, there is published an epitome of the Institute of Builders' Examinations which bears evidence of immature consideration, and which would appear to have been promulgated without reference to many building institutions and educational bodies whose suggestions might have been of very great value. It is to be hoped that the impression left on the reader—that the scheme does not permit any further appeal from, or amendment by, the builders of the country—is not justified. As it stands, it is certain that the scheme will not tempt the vast majority of technical building workers to take the matter up with any zest.

The Institution of Structural Engineers, so recently as July 5, 1923, issued a draft of its proposed revised syllabus of examinations, and, in a covering letter, points out that the Sub-Committee entrusted with the task of preparing the syllabus "feel that it would be desirable to have the best possible advice on their work . . . and that they would be much obliged for any notes that might be offered for consideration by the Sub-Committee." The Institution of Structural Engineers is to be congratulated on its courteous and business-like procedure, and it is a pity that the Institute of Builders did not seek the assistance of those most intimately acquainted with present technical examinations in building work generally.

The syllabus as laid out is but a poor attempt to adapt the Scheme of Education issued by the Board of Education in Circular 978. There are several well-established Technical School Courses that might well have served for, at least, the Licentiate stage. The scheme, in my opinion, should be properly co-ordinated with the work of existing technical colleges, and so graded to range with their fourth, fifth, and sixth year courses; this would have the considerable advantage of enabling students in different parts of the country to work on parallel lines with definite stage terminals irrespective of the town in which they may be employed for the time being. (This would not necessarily mean that local conditions need be ignored in national examinations.)

Why the important subject of Building Materials is included in the Licentiate examination for candidates of 19 years of age, and omitted from the Associate examination, is extremely difficult to understand, since students of this age cannot have had anything like sufficient experience in so difficult a subject. Further, trade subjects are included in the first and not in the second examination. Has the eminent work of cultured craftsmanship reached so low a level that it can be so easily dismissed? This, I am sure, will generally be admitted to be a serious defect. It is quite impossible, and altogether unfair, to test a craftsman in his craft and expect any degree or standard that will merit appreciation at the early age of nineteen years.

The stability and beauty of British arts and crafts have been the pride of the Empire for ages, and, although I feel there has been a set-back, it is extremely disappointing to find the Institute's standard so low. The urgent need is to re-establish our old standards of craftsmanship and to prevent, to some extent, the outflow of workers to America, where so many of our tradesmen are now going. It must be evident to the Institute that the number of craftsmen in the building trade is seriously reduced. This, unfortunately, is tending to the introduction of numerous substitutes in building work which certainly do not heighten our old standards.

The subject of Geometry, one which is at once fundamental and exquisitely beautiful, is passed over with far too little consideration. It is strange, too, why Shop-Fitting should form a separate subject in the Associate examination. Is it to be assumed that banks, offices, libraries and many other types of buildings require no fittings?

Again, exemption is offered where candidates hold degrees. What degree does the Institute expect a building student of 19 years to hold? If a degree be possible for him at that age, then it is a serious reflection on the work of our universities.

As a whole the syllabus lacks balance, and should be critically analysed to bring it in accord with the sub-divisions of the subject more generally recognised. Throughout the scheme the tenor is that of the system of commercial examinations. It is not a superabundance of expert book-keepers and accountants that is required, but rather the production of builders in the truer sense of art and craftsmanship. In the distant future posterity should be able to look with pleasure and benefit upon the work of our craftsmen; the travellers from other lands will certainly not seek out the financial records or the complexities of employers' liabilities, health and unemployment insurances, etc. Rather will be sought the architect's design and the tool marks of craftsmen: where these are missing, scorn may be the only recognition of our modern contrivances of sand-papering and paint-spraying machines.

The most objectionable feature in the whole scheme is that of the restrictive qualifications for Associates. It is difficult to understand the mentality which produces such a regulation as the following:—"That he has been engaged in business as a master builder, or as a master in some branch of the building industry, or has held what the Council deem to be a suitable position in a building firm for three years: further, that he is himself a member (or any firm or company in which he holds such suitable position is a member) of an Association which, in the opinion of the Council, is a recognised association of building trade employers." These specific limitations would inflict undue hardship upon technical building candidates in the Liverpool district in particular (assuming that the I.O.B. examinations are of importance) as the Liverpool Master Builders' Association seceded from the Federation. Further, they would give the Institute an opportunity of unjust control over large bodies of men who are quite technically capable of passing their examinations.

Why the I.O.B. has set itself up as a Court of Judgment to determine what shall be a proper association of builders, or to determine what position a man shall hold in a builder's business is presumptuous, to say the least of it. It must be obvious that all the workers in the building trades cannot be masters, nor can every worker hold a premier position—but a great many workers have sufficient intelligence and culture to qualify for these higher positions, provided that the regulations are just and reasonable. These restrictions—one cannot call them regulations—of the scheme are a distinct sign of retrogression, and it is to be hoped that they will be seriously reconsidered. Any *bona-fide* worker in the building industry should have the right to sit for such an examination. There is no Institute, in my knowledge, of so surpassing a merit that it can fence itself about so completely, and no other Institute, so far as I know, does so.

I quite agree with the general terms of the leading article that the I.O.B. is to be congratulated in attempting to improve the status of the building industry. My objections are to the methods by which they hope to attain their object.

Book-keeping and Accountancy are no doubt important, but not more so than the efficient training of the craftsman. The financial subjects are over-stressed, and might well, in many cases be left optional. The number of accountants and book-keepers compared with the number of craftsmen is small. A much better title in Group 2 of each examination would be "Organisation for Building Work."

An examination, after all, is merely a classification in the early part of a man's career: a more difficult classification takes place on his entrance into competitive industry where the examination hall is not carpeted, and the examiners all too frequently show little sympathy or sentiment save from that narrow outlook of the percentage balance. In all too many cases the small profit is due to lack of scientific organisation and method.

The time has arrived when all parties interested in the subject of building should be brought together with a view to co-ordinating, simplifying, and reducing the number of examinations. Among those concerned are the Board of Education, associations of architects, engineers, surveyors, builders, etc. The need is all too apparent when one considers the varying standards in structural building work throughout the country. Further, the number of separate examinations in the same subjects, where obviously one standard should suffice, needs attention.

The Board of Education's Circular 978 might well be taken as a foundation on which to build a complete national scheme leading finally to a B.A. or B.Sc. degree course, to be followed by a Master's degree for those intending to become specialists in separate subjects. With a reconstructed syllabus, the main plank of which should be that a candidate should be a bona-fide worker or apprentice, the Institute may achieve that desideratum so long overdue which shall give the builders that merit and appreciation recognised and accorded in other professions.

FAN STANDARDISATION.

In common with other branches of engineering the necessity for standardising the terms used in stating the performance or capacity of fans, and also a standard method of testing fans, has been apparent for some time, both to the users and to the makers. The Council of the Institution of Heating and Ventilating Engineers some time ago appointed a committee, known as The Fan Standardisation Committee, having representatives of both fan manufacturers and users, together with representatives from the Admiralty and H.M. Office of Works. This committee has been holding meetings at regular intervals since the spring of last year.

They find that there are many difficult problems to settle, and that very considerable differences of opinion exist, both amongst the fan makers and also amongst the users, as to the correct terms to use, and as to the best method of testing fans. They hope, however, eventually to clear up all misunderstandings and ambiguities, and to issue a standard list of terms, also to define a standard method of fan testing and a clear method of listing fan performances.

The British Reinforced Concrete Engineering Company's film, showing the latest methods of road-making, transforming marshy lands to reinforced concrete roads, was shown to road makers and road users at La Scala Picture House, Inverness, during Agricultural Show week.

The Clothworkers' Company has offered an annual contribution of £3,000 for five years, to the Imperial College of Science and Technology, South Kensington, to be applied towards the maintenance and development of the City and Guilds (Engineering) College.

FURNISHED HOUSES: WARRANTY OF FITNESS.

The decision in the case, Collins *v.* Hopkins, delivered by Mr. Justice McCardie, is one of extreme importance to the public, as it clearly lays down the duty of those who let furnished houses to see that the house is fit for habitation. In a structural sense this would be readily admitted, but the case raised the point, not of structural or other defects, but in relation to possible infection from disease. The defendant's husband in January, 1922, was attacked by influenza, and in February he showed symptoms of pulmonary consumption. He went to a sanatorium, but in July was again living in the house. He left again in August, but returned to the house at the end of that month and remained there until September 11, when he left for Switzerland where he died. The agreement to let the house furnished was entered into October 14, and the tenancy was to commence October 26, that is, a date about six weeks after the defendant's husband had last left the house, and the Court found that it was left in a state which rendered it a dangerous harbour and asylum for the tubercle baccili. The plaintiff, who had a wife and daughter, a child, discovered the day after he entered that the defendant's husband had suffered from pulmonary consumption, and at once repudiated the agreement and commenced this action to recover the rent he had already paid and damages. The Court found that there was a substantial risk that the house and its contents were infected with tubercle baccili, so as to constitute an actual danger to the plaintiff and his household, and, had it been necessary, was prepared to hold that, in fact, it was so infected, and judgment was given for the plaintiff. The case is reported in the *Times*, June 21.

It is important to consider the judgment from the point of view of the legal warranty that a furnished house is fit for habitation. The learned judge is reported as having said that, not only is the implied warranty one which springs by just and necessary implication from the contract, but it is a warranty which tends to the public good and the preservation of public health, and it is a warranty rather to be extended than restricted. That is a pronouncement that should be made widely known, for persons are far too careless in this matter. When we come to that part of the judgment which relates to the duty of a person who lets a furnished house which has lately been occupied by one suffering from an infectious or contagious disease, however, there is a point which seems to call for attention. The learned judge is reported as saying that it, of course, is not enough for the landlord to say he honestly believed that the house was fit and proper for safe habitation. It must, in fact, be safe and proper. But he proceeded to say, "nor can a tenant, on the other hand, renounce his contract because of mere apprehension of risk or through mere dislike to the premises through the fact, *e.g.*, that a person has died on the premises of smallpox or scarlet fever," he must show more than apprehension and dislike, and the question is: Was there an actual and appreciable risk? But he added, in the case of baccili which may mean illness and death an appreciable measure of actual risk justifies the tenant in renouncing his contract.

This portion of the judgment does not appear to us quite satisfactory, and it may be that legislation is required to strengthen the law. To determine the degree of risk as the Court indicated among the matters to be considered are the nature of the disease, the degree and persistence of infectivity, the date when the sufferer left the house, and the steps taken to prevent risk of infection. But is a person who takes a furnished house to take it in ignorance that there has been infectious or contagious disease in it, and then to find himself involved in all this hornet's nest of questions which must involve litigation? We cannot but regret that the decision does not go further and lay an absolute obligation upon the person letting his house furnished to disclose the fact that there has been some disease in the house. That fact is in his knowledge alone, and on the principle applying to life insurance the basis of the contract should depend upon the true disclosure of facts which from their nature can only be in the knowledge of one of the parties. The tenant is entirely in the hands of the landlord in this matter, for, unless disclosure is made, he does not know of the existence of any risk, and therefore can form no estimate of the steps taken to do away with it. Tuberculosis and cancer are increasing, and prospective tenants of furnished houses should be entitled to the fullest disclosure on such matters.

OBITUARY.

The death took place, at his residence, Gronville Stow Park, Newport (Mon.), on July 28, of Alderman Mark Mordey, J.P., at the age of 74 years. The deceased gentleman was well known throughout building trade circles in South Wales, and was director of Monmouth & South Wales Building Society, and the Newport Builders' Supply Co. He was also known for his association with South Wales shipbuilding companies, and was a director of Swansea Prince of Wales Dock and Port Talbot Graving Dock Companies, and a number of shipping and industrial concerns. He was the "father" of the Newport Council, having been Mayor of the Borough in 1889–90. He was a member of the Monmouthshire County Council, and a magistrate since 1893. He is survived by five children.

The death has taken place, at Ravensworth, Windermere, of Mr. Edwin Burnup, aged 70, who was in practice as an architect and surveyor, at 77, Clayton-street, Newcastle.

HOUSING IN LONDON.

In opening a conference at Spring Gardens of local authorities to consider the new Housing Bill (1923), Colonel Levita, Chairman of the Housing Committee of the L.C.C., said the magnitude of the problem of housing might be gauged from the fact that in June, 1921, the Housing Committee of the London County Council had to close its list of applicants for accommodation with a total of 26,000. Since then applications had continued to pour in. Before the war the London County Council housed 60,000 persons. When the 1919 assisted housing scheme was completed the County Council would have housed a further 63,000. The Council was the biggest landlord in London, with 117,000 tenants and a rent roll of £760,000. He believed the new Housing Bill would prove a useful instalment of legislation towards the solution of the problem. Private enterprise should be encouraged. In the metropolitan police area during 1901-1910 an average of 20,000 houses were built annually. After the Finance Act of 1910 the number fell to 8,000, and then died away to nothing. During the present year the number had risen to 8,600, built by private enterprise without subsidy. Throughout the country, in six months, 15,000 such houses had been built. The great need, continued Colonel Levita, was that of small two- or three-roomed houses. Over 53 per cent. of the persons housed in London were in two-roomed tenements. Over 83 per cent. of the applications received by the London County Council were for two- or three-roomed houses. It was most necessary that the confidence of the investing public should be restored in so far as investment in house property was concerned, in order that the building by private enterprise of houses for letting purposes should recommence. As to building costs, Colonel Levita declared that 80 per cent. of the cost of building a house went in labour.

BUILDERS' BENEVOLENT INSTITUTION.

The seventy-sixth annual general meeting of the Builders' Benevolent Institution was held on July 24, at No. 48, Bedford-square, London, W.C. 1. The chair was taken by the President, Major R. J. Holliday, M.C., F.I.O.B. (Messrs. Holliday & Greenwood, Ltd.).

The Committee of Management, in its seventy-sixth Annual Report, tendered their thanks to Major R. J. Holliday for his valuable services rendered to the Institution as President during the past year. The result of his appeal at the annual dinner in November last was so successful that the Committee were again able to grant the Christmas gift of £5 to each Pensioner, and were also gratified to find that the funds permitted a similar gift to be made at midsummer. It was felt that the annual subscribers and donors would appreciate that, whilst it was not possible to increase the amounts of the pensions, it was very desirable and in accord with the spirit in which contributions have been made to the Institution, to assist the pensioners in some small degree to meet the high cost of living. The Committee also desire to record their appreciation of Major Holliday's endeavour to interest the London Master Builders in their own charity and are hopeful that good might result therefrom. The thanks of the Committee were also accorded subscribers and donors for their generous contributions, in consequence of which the Committee did not have to reject the application of any eligible candidate, and they earnestly trusted that continued support would allow this satisfactory state of affairs to be maintained. All applications were carefully investigated by members of the Committee, and the pensioners elected during the past twelve months were Mr. E. Larking, Mrs. J. Beckett, Mrs. S. Wheeler, Mrs. M. A. Harmer, Mrs. E. McSwiney, and Mrs. E. Vears. The Committee regret to report that the following pensioners died during the past year:—Mr. T. Beckett, Mr. M. Manley, Mr. W. McSwiney, Mr. W. G. M. Wheeler, Mrs. C. Biscombe, Mrs. E. M. Downe, and Mrs. G. C. Haynes. Attention was directed to an alteration in the method of recording the list of annual subscribers and donors, whereby an additional column had been inserted showing the previous total amounts contributed since 1912 as annual subscriptions. The Committee were pleased to report that Mr. George M. Burt, F.I.O.B. (Messrs. John Mowlem & Co., Ltd.), had kindly consented to act as President for the year 1923–4, and they appealed to all friends of the Institution to support him at the annual dinner in November next.

The report was adopted.

The audited accounts of receipts and expenditure for the year ended July 7, 1923, were received and adopted.

The following officers for the ensuing year were elected:—President, Mr. George M. Burt, F.I.O.B. (Messrs. John Mowlem & Co., Ltd.); treasurer, Mr. Frank May, J.P., F.I.O.B. (Messrs. Holland & Hannen & Cubitts, Ltd.); hon. auditors, Mr. John T. Bolding (Messrs. John Bolding & Sons, Ltd.), Mr. Hubert S. Ward, F.C.A. (Messrs. Robt. J. Ward & Co.).

The following were re-elected members of the Committee of Management:—Sir James Carmichael, K.B.E., J.P., F.I.O.B. (Messrs. James Carmichael (Contractors), Ltd.); Mr. E. J. Hill, F.I.O.B. (Messrs. Higgs & Hill, Ltd.); Major R. J. Holliday, M.C., F.I.O.B. (Messrs. Holliday & Greenwood, Ltd.); Messrs. F. M. May, F.I.O.B. (Messrs. Holland & Hannen & Cubitts, Ltd.); E. S. Rider (Messrs. T. Rider & Son); F. Shingleton, M.V.O., F.I.O.B. (Messrs. Leslie & Co., Ltd.); T. Stirling (Messrs. Stirling & Johnson, Ltd.); Col. G. Haward Trollope, D.L., V.D., F.I.O.B. (Messrs. Trollope & Colls, Ltd.); Mr. H. S. Ward, F.C.A. (Messrs. Robt. J. Ward & Co.).

THE WEEK IN PARLIAMENT.

Westminster, *Wednesday.*

Rent Restriction Bill.

A number of alterations were made to the Rent and Mortgage Interest Restrictions Bill during the Committee Stage in the House of Lords.

The following new clause, moved by Lord Dynevor, was agreed to:—"Where before the passing of this Act the landlord of a dwelling-house to which the principal Act applies has granted to the tenant a valid lease of the dwelling-house for a term ending at some date after June 24, 1923, or has entered into a valid agreement with the tenant for a tenancy for such a term, and the rent thereby reserved is reserved at a rate which after, but not before, such last-mentioned date exceeds the standard rent and the increases permitted under the principal Act or this Act, the landlord may by three months' notice in writing, expiring not earlier than December 21, 1923, and not later than March 31, 1924, determine the said lease or tenancy, provided that if within one month of the receipt of such notice the lessee or tenant shall give to the landlord notice in writing that he elects to abide by the said lease or agreement and the terms thereof, then the said lease or agreement shall remain in full force and effect in every respect, including the amount of the rent thereby expressed to be reserved, unaffected by the principal Act or this Act."

An amendment was agreed to, the effect of which is to amalgamate section 5 of the principal Act with clause 3 of the Bill, in order to avoid reference to the previous Act.

Another new clause, moved on behalf of the Government and agreed to, limits to six months the period in respect of which arrears of rent may be charged by a landlord under a defective notice (amended by the County court) and in respect of which the return of excess of rent may be claimed by a tenant.

The following new clause was agreed to:—

(1) Where a dwelling-house in the occupation of a sitting tenant is subject to a mortgage to which the principal Act applied, the county court may, on the application of the landlord, make an order restraining the mortgagee from calling in his mortgage or taking steps for enforcing his security or for recovering the principal money thereby secured, if it is satisfied that such calling in, enforcement or recovery would cause exceptional hardship to the landlord. The county court may on the application of the mortgagee or landlord rescind or vary any order so made if satisfied that by reason of any material change in circumstances, rescission or variation is necessary or proper.

(2) The restrictions imposed on a mortgagee by an order under this section may be imposed subject to such conditions as regards increase of interest or otherwise, and for such time as appears to the Court to be proper, but so nevertheless that the restrictions shall cease to be operative if at any time after the making of the order:—(*a*) Interest is more than twenty-one days in arrear; or (*b*) any covenant by the mortgagor (other than the covenant for the repayment of the principal money secured) is broken or not performed; or (*c*) the mortgagor fails to keep the property in a proper state of repair or to pay the interest and instalments of principal recoverable under any prior encumbrance; or (*d*) the sitting tenant ceases to be tenant of the dwelling-house.

(3) This section shall not apply to a mortgage where the principal money secured thereby is repayable by means of periodical instalments extending over a term of not less than ten years from the creation of the mortgage.

The Bill was afterwards read the third time.

The Lords amendments were all agreed to by the Commons, and the Bill has now received the Royal Assent.

Building Materials.

Sir Walter de Frece asked the Minister of Health whether his attention had been called to the allegations of profiteering in the building trade; and whether, for the information of the public, he would consider the monthly issue of an official statement showing variations in prices of building materials and also in the payment for labour?

Mr. N. Chamberlain said the reply was in the affirmative. He was sending the hon. member a copy of the first report of the Committee on prices of building materials published on June 27. He expected to receive a further report from the Committee that week, and he understood they proposed to submit monthly schedules of ruling prices which would be published. The *Labour Gazette*, published monthly, contained particulars of changes in the rates of payment of building labour in all parts of the country, but he would consider the suggestion that the relative figures be published along with prices of materials.

For Sale or To Let?

Mr. Ede asked the Minister of Health how many of the houses approved for building under the Housing (No. 2) Bill would be for sale and how many for letting; whether, in any cases, and, if so, in how many, a maximum price for sale or letting had been placed on a house when its erection had been sanctioned; and how many houses were being built by local authorities, and how many by private builders?

Mr. N. Chamberlain said he had no information in regard to the first part of the question. As regarded the last part, 16,868 houses had been approved to date which would rank for assistance under the new Bill, and of these 13,382 would be built by local authorities and 3,486 by private builders. In no case had a condition as to sale or letting value been imposed.

Shortage of Bricks.

Mr. Frank Gray asked the Minister of Health whether he was aware that certain building operations were held up by reason of the shortage of supply of English bricks; whether he had any information as to the reason for this; and whether he could say if there were a number of brickfields, working in 1914, which had not been re-opened since the war?

Mr. N. Chamberlain said he was aware that there was a temporary shortage of bricks in London and the South-Eastern Counties, and was informed that the Committee on Building Materials Prices would deal with this question in their report which would be presented that week. There were, no doubt, some brickfields which, for economic reasons, were not producing at present, but he had no records of the numbers of them.

Housing Progress.

Mr. T. Thomson asked the Minister of Health for the latest information available as to the applications received for the erection of houses under the various schemes permitted by his new Housing Bill, the number sanctioned, and the number he estimated likely to be put in hand before the end of the year?

Mr. N. Chamberlain said that up to date proposals under the Bill had been submitted for the erection of approximately 22,000 houses, and approvals had been given in respect of 16,868 houses. He had no means of estimating the number likely to be put in hand before the end of the year.

Insurance by Industries.

Mr. D. G. Somerville asked the Minister of Labour what was the result of the consideration given, as promised, by his department to the proposal of insurance by industries and to the Watson Report on the insurance scheme as a whole?

Sir M. Barlow said he was awaiting a reply from the National Confederation of Employers' Organisations and the Trade Union Congress

General Council on the question. The Interdepartmental Committee on Health and Unemployment Insurance had made three interim reports. Action had been taken in accordance with the recommendations of the first two Reports. The third Report recommended the abolition of refunds to insured workers at the age of sixty and a modification of the rule limiting covenanted benefit in relation to the number of contributions paid; these recommendations could not be adopted without legislation.

Unemployed Workers.

Sir M. Barlow, Minister of Labour, informed Mr. Adams that the following statement showed for Great Britain the number of insured men engaged in building trade occupations, together with the number of unemployment books lodged at May 21, 1923 :—

Occupation.	Estimated number of insured men employed.	Number of unemployment books lodged at May 21, 1923	Percentage unemployed.
Carpenters ..	123,820 ..	8,795 ..	7·1
Bricklayers	58,540 ..	3,050 ..	5·2
Masons ..	23,010 ..	1,183 ..	5·1
Slaters ..	5,190 ..	552 ..	10·6
Plasterers ..	16,290 ..	1,517 ..	9·3
Painters ..	109,800 ..	8,048 ..	7·4
Plumbers ..	33,090 ..	3,820 ..	11·5
Labourers of above occupations ..	257,180 ..	43,748 ..	17·0
All others ..	88,630 ..	13,981 ..	15·8
Total (Building Trade)	715,550 ..	84,694 ..	11·8

Tender Prices.

Mr. N. Chamberlain informed Mr. T. Thomson that the average tender prices for houses built under the Housing Act, 1919, Assisted Scheme for various months were given in the following table. The tender prices were in most cases subject to adjustment for fluctuations in the cost, labour and materials :—

Date.	Type of house.	Tender price.	Percentage which labour cost bears to that of materials.
September, 1920	A. ..	£881 ..	84 per cent.
,, ,, ..	B. ..	949 ..	82 ,, ,,
October, 1920 ..	A. ..	888 ..	84 ,, ,,
,, ,, ..	B. ..	958 ..	82 ,, ,,
December, 1921 ..	A. ..	514 ..	73 ,, ,,
,, ,, ..	B. ..	566 ..	71 ,, ..
March, 1923 ..	A. ..	363 ..	58 ,, ..
,, ,, ..	B. ..	402 ..	57 .. ..

The following statement gave the highest and lowest average tender prices for A3 and B3 type of houses approved under the Housing Act, 1919, Assisted Scheme :—

Period.	Highest Price A3 type.	Highest Price B3 type.	Lowest Price. A3 type.	Lowest Price. B3 type.
July 31, 1919, to Dec. 31, 1919 ..	£1,002 ..	£1,254 ..	£576 ..	£603
Jan. 1, 1920, to Dec. 31, 1920 ..	1,097 ..	1,258 ..	589 ..	589
Jan. 1, 1921, to Dec. 31, 1921 ..	935 ..	1,080 ..	465 ..	500
Jan. 1, 1922, to Dec. 31, 1922 ..	569 ..	590 ..	297 ..	304
Jan. 1, 1923, to June 30, 1923 ..	446 ..	505 ..	299 ..	329

Housing Loans.

Sir Beddoe Rees asked the Minister of Health whether, in case any society or company, as provided for in Section 3 of the new Housing Bill, should secure from the Public Works Loan Board a loan not exceeding 75 per cent. of the total value for the erection of houses as provided in the Bill, such society or company, to enable them to raise the remaining 25 per cent., would be allowed to capitalise the Government subsidy of £6 per house; whether the Government would arrange accordingly; and, failing that, would such society or company be allowed to make private arrangements for such capitalisation if found possible?

Lord E. Percy said that the normal limit for loans by the Public Works Loan Board was 66⅔ per cent. of the value of the property, but the Board might advance up to 75 per cent. on the provision of such further security as they might think fit. The Housing Bill did not provide for the payment of any capitalised security by the Government. If assistance in this form was desired, application must be made to the appropriate local authority under Clause 2, whose proposals would be considered by the Ministry with all relevant circumstances.

Mr. Emlyn-Jones asked the Minister of Health, whether, in view of the different interpretations which local authorities would place on the term market value in Clause 20 of the Housing Act, he would indicate the principles and methods of valuation to be followed; and whether he would instruct local authorities to have regard to the purchase prices of new houses in their several localities when arriving at the market value of houses in respect of which loans were applied for?

Lord E. Percy said the Minister did not think any difficulty would arise as regarded the method of valuation for the purpose of Clause 22 of the Housing Bill, and he did not propose to issue any special instructions. The valuers appointed by the local authorities would value as for an ordinary mortgage, having regard to the local circumstances and the period of the proposed loan.

Smoke Abatement Bill.

Lord Onslow, in moving the second reading of the Smoke Abatement Bill in the House of Lords, said that the measure extended the Public Health Act, 1875, by providing that not only black smoke, but all smoke should be included in the smoke nuisance, and that the term "smoke" should include soot, ash, grit and gritty particles. Clause 1 enacted that Sec. 334 of the Act of 1875 should have effect as if there were included processes of re-heating, and annealing, hardening, forging, converting and carburising iron and other metals. The Minister of Health might, by provisional Order, at any time after the expiration of five years, exclude from that section any of the processes mentioned. The Government did not think that the Ministry of Health was the proper authority to fix standards for the measurement of black smoke, and the Bill left that duty to the local authorities. Power was taken to extend the list of obnoxious or offensive gases. Clause 4 dealt with new buildings and empowered urban authorities to make by-laws requiring the provision in new buildings, other than private dwelling-houses, of such arrangements for heating as were calculated to prevent or reduce the emission of smoke.

The Bill was read a second time.

Consolidation Acts.

Lord Onslow announced in the House of Lords that it was the intention of the Government later to introduce legislation consolidating the various Housing Acts.

Durability of Building Stones.

Writing to the *Times*, Mr. Alan E. Munby, F.R.I.B.A., referring to the tests in progress at the Geological Survey and Museum with the co-operation of the Royal Institute of British Architects, states that carefully prepared specimens of six common building stones were experimented upon, two samples of each, one facing north and the other south, being exposed under similar conditions on the roof of the museum in Piccadilly for ten years. Full-size photographs of the faces of the blocks (otherwise protected by frames) were taken, and a magnified specific area of each block was also photographed at the beginning and end of the period, and during the interval chemical analyses, microscopic, freezing, absorption, and staining tests were carried out upon other pieces of the stones saved in the preparation of the samples. "Any generalisations from so small a number of samples tested for what is, comparatively, a short period, must be very carefully guarded, but, with this reservation, it may be said that the sandstone (from Dumfriesshire) tested showed the leastdecay, that Portland stone of the best quality showed its superiority over other limestones, while Bath stone of fine grain showed higher resistance than the coarser and more shelly varieties of this stone, and also probably than a typical oolitic stone from the Midlands.

NEW BUILDINGS IN SCOTLAND.

Aberdeen.—Various.—Plans have been passed for new buildings and alterations, estimated value £7,900. One plan is for alterations to premises in Commercial Quay for the North-Eastern Ice Co., at a cost of £3,300, and another is for a bungalow in Royfold-crescent for the Misses J. K. and J. A. Reid, North Silver-street.

Ayr.—New Buildings and Reconstruction.—Plans have been approved for new buildings and for reconstruction of old buildings at the chemical works of D. Wyllie & Co., estimated to cost £5,000; a villa at Springvale Park, Midton-road, for W. Paton & Sons, estimated to cost £1,600; and a piggery at Woodfield House, for Mr. W. F. Kerr, estimated to cost £200.

Ayr.—Houses and Electric Main.—The Lighting Committee has authorised the Engineer to lay a new electric main in Southpark-road, Prestwick, at an estimated cost of £150. Contracts have been placed by the T.C. for the erection of 40 houses at Woodfield. The estimated cost is £18,000.

Dundee.—Houses.—Plans of new buildings have been lodged at the office of the City Engineer as follows :—Blackness-avenue, house and garage for J. M. Morgan, cottage for A. Robertson; Bruce's Entry, warehouse for E. McGregor; Chapel-street, alterations for managers of Albert-square U.F. Church; Duncan-street, Downfield, shop and workshop for J. P. Thoms, Lodgeroom, &c., for the Roineach Mhor Masonic Lodge; Farington-street, garage for Robert R. Smith; Gardner-street and Campbell-street, houses for the T.C.; Glamis-road, house for R. G. Lamb; Hyndford-street, houses for Charles Gray; Kerrington-crescent, garage for John Bell; Loons-road, houses for the T.C.; Lynewood-place, additions for John T. Harris; Park-place, alterations on clubroom for the Seaforth Highlanders' Association; and Tullideph-road, cottages for John Cree.

Dundee.—Street Works.—The City Engineer reported to the Corporation Works Committee that repair of streets would involve considerable expenditure and that it would cost about £70,000 to deal with remaining streets that required paving. He also submitted a list of the macadamised streets requiring resurfacing at an estimated cost of £11,000, while £4,780 would require to be expended on the footways. These figures were arrived at after deducting the Government grant.

Forfar.—Operating Theatre.—The directors of the Forfar Infirmary have requested a special committee to report on the provision of an extended and improved operating theatre and an up-to-date X-ray apparatus.

Perth.—Football Grand Stand.—The directors of St. Johnstone F.C. have adopted plans for the rebuilding of the old grand stand in an improved position; the erection of rows of seats between the two stands; and additional lavatory accommodation throughout the enclosure.

Perth.—Cable Laying and Electricity Extensions.—The Corporation Electricity Committee will submit a cable-laying project to the Unemployment Grants Committee. The Electricity Committee is considering the question of extending the electric lighting system to the Gannochy housing scheme of Arthur Bell & Son, Ltd.

Peterhead.—Various Works.—A committee of the T.C. is considering proceeding with the following works :—The widening of a part of Queen-street to bring it in line with Balmoor-terrace; improving a part of Links-terrace and the foreshore along by the Links; building a bridge across the Ugie; levelling Raemoss Park for recreation purposes; the provision of a dry dock; a new bridge at the harbour; the erection of a town hall, with office accommodation; and the provision of public lavatories.

Stranraer.—Cottages.—The M.H. has sanctioned tenders amounting to £5,528 12s. 2d. for the erection of five blocks of double cottages.

NEW BUILDINGS IN LONDON.

London Docks Extensions. — Important developments, involving the expenditure of £5,000,000, have been decided upon by the Port of London Authority. The work to be undertaken will give employment to thousands of men over an extended period, besides providing facilities whereby large numbers of additional riverside workmen will be required. The work will consist of new warehouses and docks, and probably a new lock at the West India Docks.

Wandsworth.—TECHNICAL INSTITUTE.—The E.C. of the L.C.C. recommends that a new technical institute be provided on the vacant site at the corner of St. Anne's-hill and High-street.

Paddington. — ALTERATIONS. — Structural alterations at the Norland Hotel, Granville-place, W., contractors, Messrs. G. H. Carter, Ltd., of Holloway. No sub-contracts have been let.

Stroud Green.—ALTERATIONS.—Messrs. G. H. Carter, Ltd., of Holloway, N.7, have received the contract for external and internal decorations and installation of electric lighting at Stroud Green Baptist Church.

PATENTS.*

APPLICATIONS PUBLISHED.*

195,324.—A Melville: Spun concrete pipes.

195,326.—J. B. Hilliard: Building and paving blocks and slabs.

195,330.—P. J. Dempsey: Hanging window sashes.

189,760.—Himmelsbach Akt. Ges. Geb.: Posts.

195, 411.—A. V. Shaw: Flushing apparatus for water-closets.

195,427.—A. G. Archer and C. J. Stevens: Contrivances or devices for binding or connecting together scaffold posts, steel tubes or pipes.

195,463.—T. Hughes: Manufacture of pigments or paints.

195,473.—A. Taylor and Mather & Platt, Ltd.: Fireproof doors.

195,485.—Pearson Bros. & Campbell, Ltd., and R. S. Pearson: Concrete or light floors, landings, steps, walls and the like.

195,489.—C. W. C. Needham: Sectional model buildings.

195,497.—J. Y. Johnson (Badische Anilin & Soda-Fabrik): Softening wood.

195,502.—R. H. Annison: Apparatus for supplying or forcing cement, grout, or other materials or mixtures into the interstices of structures or soil.

195,511.—J. J. Dunne: Device for fixing window cords without removal of sashes.

195,542.—B. Taylor-Coopland: Cramps for picture and like frames.

195,545.—W. T. Brassington and E. C. Hodgetts: Combination chair and table.

195,559.—British Thomson-Houston Co., Ltd.: (General Electric Co.): Plastic compositions.

195,565.—E. R. Lancaster: Doors, gates, or shutters.

195,570.—H. A. Leaver: Roads and pavements.

196,956.—F. W. Hodsoll, C. A. M. Hodsoll, F. P. M. Hodsoll, and F. C. Hodsoll: Binding means or cramps for scaffolds, timbers, and the like.

196,957.—H. P. Lancaster: Preparatory piles used in the construction of concrete piles.

196,970.—O. W. Beach: Machines for levelling or excavating land.

197,005.—T. Shields (Corrugated Bar Co., Inc.): Reinforced-concrete columns.

197,016.—Plantation Rubber Manufacturing Co., Ltd. (in liquidation) and M. M. Dessau: Roadways, pavements, and stairways.

197,050.—A. J. Rowleb: Wall coverings.

* All these applications are now in the stage in which opposition to the grant of Patents upon them may be made.

RATES OF WAGES IN THE BUILDING TRADE.

The following are the rates of wages in the building trade in England and Wales. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur :—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Brick-layers' Masons' Labourers.	Plasterers Labourers.

(For rates of wages in the Building Trade in Scotland, see page 189.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING AND PAINTING

August 4.—**Brierley Hill.**—Houses.—Erection of 20 houses, with roads and sewers, for the U.D.C. Mr. John Yorke, Surveyor, Town Hall, Brierley Hill, Staffs. Deposit £2 2s.

The Board of Trade announce that the British Industries Fair (organised by the Department of Overseas Trade) will be held at the White City, Shepherd's Bush, from April 28 to May 9, 1924.

PROPOSED NEW BUILDINGS & OTHER WORKS.*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations:—T.C. for Town Council; U.D.C. for Urban District Council; R.D.C for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; L.C.C. for London County Council; B.C. for Borough Council; and P.C. for Parish Council.

Abersoch.—Mr. Frank C. Minoprio, Haulfryn, Abersoch and Liverpool, not being satisfied with the corrugated iron building proposed to be erected as the new infant school at Abersoch, has obtained the permission of the county authority to erect a modern building at his own expense as a gift to the town.

Ardsley.—Plans passed by U.D.C.: Three houses at Jeffrey Field, Bradford-road, for Mr. E. Farrar; house and garage in Jeffrey Field, for Mr. E. Farrar; house in Rein-road, West Ardsley, for the Misses Lassey; bungalow, at Rein-road, West Ardsley, for Messrs Harrison, Spenseley & Sons.

Banbury.—Plans passed by R.D.C.: House at Wardington, for Mrs. French; new wing to Manor House, for Mr. J. B. Pease; alterations and drainage at Manor House, Adderbury East; two houses for Mr. A. Brown; two houses at Bodicote, for Mr. T. L. Dale.

Barnstaple.—Plans passed by T.C.: Alterations to 5, Cross-street, by Mr. J. C. Southcombe, for Messrs. Radford & Yeo; alterations, 104, Boutport-street, for Mr. C. H. Lake; residence, Rose Hill, Rumsam, by Messrs. Oliver & Son, for Mr. T. Dunn.

Barrowford.—The U.D.C. have approved plans for the erection of a pair of semi-detached houses in Wheatley Lane-road, for Messrs. J. R. & H. Pickup.

Bath.—Plans passed by T.C.: Class rooms, convent, Pulteney-road; garage, rear 99, Sydney-place; alterations, 11, Westgate-street; bedrooms, 3 & 4, Devon Cottages, Odd Down; conversion into flats, 45–47, Pulteney-street; workshops, West Central School, Lymore-avenue; garages and sheds, Sydney Wharf; garage, Monmouth-street; bungalow, Wellsway; office extension, Pitmans' Works; bungalow, Villa Fields; lock-up shops, Third-avenue and Shaftesbury-road; conversion into flats, St. Peter's-terrace; kiln and extension of potteries, Victoria Brick-yard; extension of compressor house, Victoria Bridge-road; garage, 14, Combe-park.

Bedwellty.—The U.D.C. has decided to negotiate for land at Pengam for purposes of erecting new Council offices.—The G.W.R. Co. has notified U.D.C. that it is examining proposals for new railway station at Fleur-de-Lis.—The Council has called for report on housing needs, and probable grants, at Aberbargoed.—The Board of Guardians, in conjunction with the Ebbw Vale U.D.C., has submitted to Ministry schemes involving expenditure of £16,000, with grant assistance on basis of unemployment relief application.—The ex-service men and general public have received sanction of U.D.C. to erect war memorial gateway, at estimated cost of £800, at Workmen's Cottage Hospital.—It was reported at meeting of U.D.C. that Powell Duffryn Coal Co. is to expend not less than £12,000 on extension of Aberbargoed Cottage Hospital as memorial to company's employees who fell in the war.

Bingley.—Plans passed by U.D.C.: Garage in Hubert-street, for Mr. A Peace.; garage at Nab Wood, for Mr. Dibb; pair of bungalows at Priestthorpe-lane, for Mr. J. B. Lister; bungalow at Long-lane, Harden, for Mr. H. Thompson; amended plan of gable house at Plevna-terrace, for Messrs. W. & S. Bradley; shed at Stanley Mills, for Messrs. G. Ackroyd & Son; bungalow at Keighley-road, for Mr. J. Lee.

Birkenshaw.—A new mission church is to be erected at Toftshaw-lane. Mr. Arthur Verity, of Birkenshaw, is architect.

Blackburn.—The Board of Management of the Blackburn and East Lancashire Royal Infirmary are considering a scheme, estimated to cost £200,000, to utilise the site to the fullest advantage. The first step will be the erection of a new wing which is intended to be the town's War Memorial, the estimated cost of this portion being £75,000, and the plans have recently been approved by the Extensions Committee. The architects for the scheme are Messrs. Sames & Green, Richmond-terrace, Blackburn.

Blackley.—Mr. F. W. Howarth, wallpaper manufacturer, Central Mills, Blackley, is proposing extensions to his mill premises, and enquiries are being made as to cost.

Glasgow.—Plans for the erection of warehouses, &c., at the corner of Trongate and Stockwell-street were submitted by the Corporation City Improvements Department at the last sitting of the Dean of Guild Court yesterday. The buildings, which are to be erected on sites at present being cleared, are estimated to cost £190,000. Consideration of the plans was continued.——Plans for buildings and alterations estimated to cost in the aggregate £285,000 came before the Court. A considerable number of the applications were for leave to erect garages. Among the linings granted were the following: The Corporation of Glasgow Housing Department, to form streets and sewers at Hamiltonhill; M'Farlane, Lang & Co., 38, Wesleyan-street, additions to biscuit factory,

* See also our List of Contracts, Competitions, etc.

Clydeford-drive, Tollcross, at an estimated cost of about £23,000; Govan Ropework Co., Ltd., Helen-street, Govan, to demolish existing buildings and erect additions to works on the west side of Helen-street; The Rev. William Ogg and others, trustees of Mount Florida United Free Church, to erect church hall at the church, Cathcart-road and Hampden-street; Dallas's, Ltd., Milton House, 160-174, Cowcaddens-street, additions to property at Cowcaddens-street; James Craig (Glasgow), Ltd., 10–38, Woodlands-road, alterations to premises at 123–127, Sauchiehall-street; Brown & Adam, Ltd., Riverbank Works, Pollokshaws, additions to works at Riverford-road, Pollokshaws.

Grantham.—The Board of Guardians has decided that application be made to the Minister of Health for approval of expenditure in connection with the installation of a new heating and hot-water apparatus at the Guardians' Institution, and to the raising of a loan of £5,600 for defraying the expenditure.

Haddington.—It was agreed at a meeting of the East Lothian Western District Committee to reconstruct a section of the Great North-road in Haddington parish, at a cost of £22,000, of which the Ministry of Transport is to give a grant of £16,500.

Halifax.—A new shed is to be erected shortly at Holmfield Mills for Smith, Bulmer & Co. Tenders for the work are being invited by the architects, Glendenning & Hanson, 15, Commercial-street, Halifax.

Heston and Isleworth.—Plans passed by U.D.C.: Messrs. Young & Hall, re-building "The Castle" P.H., Upper-square; Messrs. Thos. Hiscock, Ltd., additions to 104, Hanworth-road; Mr. S. Daws, house, College-road; Mr. W. J. W. Westlake, two houses, Bristow-road; Messrs. P. Chase Gardener & Co., house, Jersey-road; Mr. Geo. F. Simmons, house, Lampton-road; Mr. A. Harris, two houses, Hibernia-road; Mr. J. W. Stanley Burmester, bank premises, London-road; Mr. P. F. E. Carter, two houses, Cambridge-road; Messrs. Power & Goold, twelve houses, Harvard-road; Mr. A. L. Good, bungalow, College-road.

Horncastle.—Plans passed by R.D.C.: Two bungalows for Mr. B. Vinter; bungalow for Mr. A. S. Coppick, Duddles Bridge, New York; house at Roughton, for Mr. and Mrs. J. H. Sharp.

Hornsey.—Plans passed by B.C.: Ten houses, Connaught-gardens, by Fidlers, Chancery-lane; eight houses, Ellington-road, by Mr. Charles East, Muswell Hill; four houses, Middle-lane, by Mr. W. Drinkwater, junr., Winchmore Hill; a block of four maisonnettes, Inderwick-road, by Slatford Bros., Crouch End; conversion of 48, Priory-road into two flats; six houses, Tregaron-avenue, by Mr. A. J. Walker, Crouch End; two houses, Lauradale-road, by Mr. J. W. Symonds, Muswell Hill; houses, Montenotte-road, by F. Cottrell, Ltd., Crouch End; Cranley-gardens, by Mr. W. F. Adams, Muswell Hill; Tregaron-avenue, by Mr. R. Pringle, junr., Crouch End; Cranley-gardens, by Mr. W. J. Lewcock, Hornsey; Sheldon-avenue, by Mr. W. Quennell; alterations, by Messrs. Lyons, Crouch End-broadway.——Plans were also passed for thirty-eight lock-up garages at the rear of Colney Hatch-lane.

Huddersfield.—Plans passed: Two detached houses, for the Board of Guardians, on the Reas Estate.

Ilfracombe.—The U.D.C. has instructed Messrs. Matchem & Co., of London, to prepare plans for a concert hall to accommodate 750 people.

Lancaster.—Plans passed by T.C.: Six houses, Wingate Saul-road, for Mr. W. C. Halliday; bungalow, Hall Park Estate, for Mr. G. M. Easterbrook; two houses, Hall Park Estate, for Messrs. R. Baines & Co.; house, Hall Park Estate, for Mr. F. Cockerill; additions to "Eastcliffe," Borrowdale-road, for Mr. J. S. Woolstencroft; workshop, Spring Garden-street, for Messrs. W. & I. Peill; motor garage, 2, Cork-road, for Mr. Loxam; bungalow, Heaton-road, for Messrs. Thompson & Morris.

Leyton.—Plans passed by U.D.C.: J. Hoare & Sons, outside staircase, 383, High-road, Leyton; W. H. Young, addition, 97, Francis-road; Williams Bros. Direct Supply Stores, Ltd., additions, 736-738, High-road, Leytonstone; Shenstone & Co., Ltd., factory at Grange-road; Smee & Houchin, new mission hall at Ashville-road; Stevenson & Sons, alterations, 842, High-road, Leyton; T. S. Chappel, mission church at Boundary-road; H. J. Hicks, workshop, 105, Goldsmith-road, Leyton.

Llanelly.—The R.D.C. has put forward for grant and approval roads schemes aggregating £14,500.

Merthyr Tydfil.—The T.C. has received estimates showing cost of proposed new Merthyr-Brecon road to be £10,700, and has applied for additional grant to the £4,000 promised.—The Board of Guardians have submitted plans for taking over part of Thomas Town burial ground for work of extending and adding to workhouse.—Plans have been approved for new cinema theatre, for Messrs. Anglo-Cambrian Trust, Ltd., on site of Castle Hotel.—The Council is to demolish stone boundary walls at Galon Uchaf site, and substitute concrete posts and wire fencing to permit the widening of the parish road.

Middlesbrough.—The Corporation Plans Committee have approved 18 sets of plans for houses coming within the subsidy scheme, and six for non-subsidy houses. Numerous alterations to business establishments have also been sanctioned.

Middleton.—The Boarshaw Raising & Finishing Mill, Middleton, are proposing alterations and repairs to their premises.

Newcastle.—The T.C. have accepted tenders for the erection of 395 houses at a cost of £95,000. These are to rehouse the people of the slum area, which is to be destroyed.

Newport (Isle of Wight).—Plans passed: Alterations, Victoria-road, for Mr. G. Adams; shed, 17, Terrace-road, for Mr. G. N. Rogers.

Newport (Mon.).—The erection by T.C. of new building for museum and art gallery so as to leave free for library purposes the central library buildings is being considered.—The T.C. is to be approached by the St. Mellon's R.D.C. to assist in construction of a new sewer from the Borough boundary to Malpas, and on matter of widening Barrack-lane and Risca-roads communications.

Ogmore.—The Ogmore and Garw U.D.C. has applied for approval and grant in respect to schemes for improving the Bettws-Llangeinor-road (estimate £1,400) and the Wyndham-Aber-road (no estimate). The Glamorgan C.C. engineer advises the Ogmore Council to apply in respect to Blackmill-Llangeinor-road (estimate £14,000), but as yet this has not been done.

Oswaldtwistle.—The Oswaldtwistle D.C. have approved plans for two houses in Fielding-lane for Mr. T. Gregson, and for a bungalow in New-lane, for Mr. W. Clegg.

Penybont.—The R.D.C. is informed that the Ministry of Health have sanctioned a further loan of £13,065 for completing the Pencoed and Coychurch Higher Main Drainage and Sewage Disposal Works and the branch sewers for the respective areas. The engineer for the scheme is Major T. J. Moss-Flower, of Westminster and Bristol.

Port of London.—Over £5,000,000 is to be spent in the course of the next five years on schemes of reconstruction and extension of the Port of London. Chief amongst these is the making of an entirely new dock at Tilbury and the building of a passenger landing stage.

Port Talbot.—The B.C. has decided to proceed with widening of Cwmavon-road, several pieces of land necessary having been acquired, and has instructed surveyor "to prepare an extensive scheme."—The Council has considered the surveyor's report on housing needs in the district, and has decided to form a scheme for 100 houses to be erected at Aberavon, Port Talbot, Cwmavon and Margam.—The B.C. has called for estimates of work required for isolation hospital.

Rawtenstall.—The T.C. are proposing to erect 36 additional houses on a site at Crawshawbooth, and 12 houses at Higher Cloughfold, by direct labour or contract.

Rhyl.—Plans passed: First batch of houses under the Council's new scheme.

Rotherham.—The R.D.C. has signed contracts with Messrs. R. Snell & Sons for sixteen houses at Dalton, and the Chester Hill Quarry Co. for eight houses at Thrybergh.

Salford.—Plans passed by T.C.:—Construction of tramway shelter at junction of Cross-lane and Windsor, Salford; alterations to shop, 260, Regent-road, Salford; construction of lavatories, Electricity Mains Depot, Frederick-road, Broughton; garage, Bury New-road, Broughton; sanitary accommodation at works in Athole-street, Pendleton; garage, 125, Lightoaks-road, Pendleton; sanitary accommodation, "Havelock Inn," Allen-street, Pendleton; conversion of dwelling-house into suites of rooms, "Oakwell," Bury Old-road, Broughton; alterations to Empire Cinema, Great Cheetham-street East, Broughton; premises, 339, Regent-road, Salford; additions to "Duke of Sussex" Inn, Sussex-street, Broughton; works, Whit-lane, Pendleton.—Messrs. W. Johnson & Son, architects, 27, Oldham-road, Miles Platting, Manchester, are preparing plans for alterations to the "Royal Oak" Inn, Salford, for the Rochdale Manor Brewery Co., Molesworth-street. The contract is not yet let.

Scarborough.—The Corporation have decided to erect a new public hall, ballroom and other premises on the site of the Olympia Ballroom, on the South Foreshore-road. Lieut.-Col. Harrison bequeathed all his foreign trophies to the Corporation on condition that they were all housed in one building, and there is no available building suitable for the purpose.

Sedgefield.—The R.D.C. have adopted plans for fourteen houses at Ferryhill Station, for Messrs. Dorman, Long & Co., Ltd.

Shaw.—The Fern Cotton Spinning Co. (1920), Ltd., are proposing extensions to the card room of their mill premises.

Smethwick.—For the relief of unemployment during the coming winter a scheme, estimated to cost £124,626, has been submitted by the Council to the Ministry of Health. This amount includes £48,800 for excavations and construction of concrete gas-holder; £39,400 for gas-holder; and £13,500 for construction of 100 railway wagons.

Southgate.—It was reported at the last meeting of the R.D.C. that the Ministry of Health were "favourably inclined to the Council erecting 10 or 20 houses on the Nursery-road site, to qualify for grant under the Housing Bill now before Parliament."

Sowerby Bridge.—The U.D.C. have decided to erect a number of houses on the Albert-road site, at an estimated cost of £494 per house.

Stockton-on-Tees.—The R.D.C. has passed a plan for 12 dwelling-houses in three blocks of four proposed to be erected on the west side of Pinewood-road, Preston, for Mr. G. E. Gray, Eaglescliffe.

Thurstonland.—Plans passed by U.D.C. 22 semi-detached houses at Scar End, Brockholes, for the Brockholes Building Co.

Tredegar.—As a result of recent public inquiry the U.D.C. has now received permission to borrow £4,600 for laying of gas mains and £6,420 for water supply works.—The Council has received notification that C.C. will join with other local authorities in carrying out proposed construction of new Tredegar-Talybont road for which estimates are in course of preparation.

Wallasey.—Plans passed by T.C.: Garage and additions to "The Limes," St. George's-road, for Mr. I. Adamson; vestry at St. Hilary Church, for the Vicar and Wardens of such church; eight houses, Hilbre-avenue, for Mr. Owen Roberts; two houses, Bellfield-grove, for Messrs. Harrocks Bros.; two garages, St. Hilary-drive, for Mr. T. Owen; four houses, Breck-road, for Mr. T. Owen; lavatory, &c., Seacombe Ferry Hotel, for Threlfall's Brewery, Ltd.; alterations and additions to Wellington House, Wellington-road, for Mr. Thomas Craig; conversion of shop and dwelling-house, King-street, for Barclays Bank, Ltd.; film store, offices, &c., Church-road, for Mr. A. R. Rutherford; house, corner of Claremount-road, Mr. G. A. Lindley; motor garages, Broadway-avenue, for Mrs. J. Sharpe; seven houses, Dinmore-road, Hartington-road and Devonshire-road, for Mr. J. McGeoch; ten houses, Thorncliffe-road, for Messrs. Chelmick Bros.; two houses and garages, Marlowe-road, for Mr. W. Stocks; extension to Fairhaven Institute, Seaview-road, for Wallasey Labour Properties Society, Ltd.

Wallsend.—The T.C. are applying for a further loan of £12,000 in connection with their water supply scheme.

Wanstead.—The Essex C.C. has adopted the recommendation of the Higher Education Committee that, subject to the sanction of the Board of Education, the Wanstead rectory and glebe, extending to about 9 acres, be purchased for £4,400 for Secondary School purposes.

Warrington.—The Town Clerk and Borough Surveyor are to report on the feasibility of proceeding with the Market Gate improvement, and also the lay-out of the land in that neighbourhood.

Whitwood.—Mr. Easedale has been appointed consulting surveyor to the U.D.C. in succession to the late Mr. A. Hartley.

Willesden.—Plans passed by U.D.C.: Organ gallery to Pavilion Cinema, Banister-road, Kensal Rise, by Mr. Max Clark, for the London Cinemas, Ltd.; motor garage, 182, Walm-lane, Cricklewood, for Mr. George Alexander; vestry addition to St. Lawrence's Church, Chevening-road, Brondesbury, by Messrs. Miskin & Son, for the Rev. L. G. Pollard; motor garage, 35, Mulgrave-road, Willesden, by Mr. W. E. Sanders, for Mr. F. Cleveland; house, Neasden-lane, Neasden, by Mr. T. H. Hedges, for Dr. F. W. Miller; mortuary chapel, St. Andrew's Hospital, Dollis Hill, by Mr. T. H. B. Scott, for the Rev. M. E. Carton de Wiart; workmen's cottages, St. Andrew's Hospital, Dollis Hill, by Mr. T. H. B. Scott, for the Rev. M. E. Carton de Wiart; addition to shop, 101, High-road, Kilburn, by Mr. F. Thomas, for Messrs. Wheatland & Sons; house, Mount Pleasant-road, Kensal Rise, by Messrs. Trant Brown & Brightiff, for Mr. W. Glanville; motor garage, Waxlow-road, Willesden, by Mr. T. Jay Evans, for the British Luxfer Prism Syndicate, Ltd.; hostel to Maria Grey Training College, Nos. 9 & 11, The Avenue, Brondesbury, by Mr. H. G. Crothall, for the Governors of Maria Grey Training College; motor garage, 96, Hanover-road, Kensal Rise, by Mr. G. A. Sexton, for Mr. F. S. Henwood; four houses North-way, Neasden, for the Unit Construction Co., Ltd.

Wilmslow.—Wilmslow branch of the British Legion are negotiating for the purchase of the old Drill Hall. It is understood that the purchase price will not be a high one, and any money over will be devoted towards alterations and equipment for conversion into club premises.

Wolverhampton.—The E.C. are considering the question of increasing the accommodation of the Secondary School.

Worthing.—Plans passed by T.C.: House, Reigate-road, E. Nutter, for W. J. Golvin; two houses, Pavilion-road, W. A. Tree, for W. G. Tree; house, Goring-road, B. Cheal, for Major Merritt; two houses, Georgia-avenue, E. J. Love, for P. J. Alexander; additions to house, Rowlands-road, A. M. Butler, for Barclays Bank, Ltd.; house, Rowlands-road, H. M. Potter, for W. Weller; house, Chesswood-road, J. E. Lund, for J. Dillistone; house, Broadwater-road, A. Clare, for H. H. Collis; additions to Marine Hotel garage, Marine-parade, Bostel Bros. (Worthing, Ltd.), for Tamplin & Co., Ltd.; house, Mill-road, J. E. Lund, for G. Harwood; reconstruction of garage, Library-place, Clayton & Black, for Southdown Motor Services, Ltd.; two houses, Wordsworth-road, for T. Peters; house, Windsor-road, for A. Crane & Sons; house, St. Valerie-road, B. J. Blaker, for H. Fuente; house, Bath-road, S. C. Phillips, for S. W. Phillips & Co.; two houses, Guildford-road, H. M. Potter, for G. Standing & Sons; garage, "Clavadel," Boundary-road, Patching & Co., for Mrs. Heap; six lock-up garages, Liverpool-road, F. Carwardine, for J. W. Mansfield; house, Reigate-road, T. R. Hyde, for J. Angel; two houses, Navarino-road, for G. W. Still.—The Justices have passed the plans presented by the Kemp Town Brewery for alterations at the "Alexandra" Hotel. The T.C. has sanctioned an estimated expenditure of £16,000 for laying-out the Denton Recreation Ground and Beach House Park. There are to be two bowling-greens, twelve tennis courts, ornamental gardens, a parking place for motors and cycles, two golf putting courses, a sunken garden, and a lily pool.

York.—Plans passed by T.C.:—C. Martin, Ltd., two houses, Curzon-terrace; Cattley, Ernest & Co., alterations, 56, Skeldergate; G. H. Pegg & Son, three houses, St. Clement's-grove; York County Hygienic Laundries, additions, Foss Islands-road; G. Longstaff, house, Moorgate; J. B. Inglis, house, Driffield-terrace; Atkin Bros., four houses, Poppleton-road.

FIRES.

Barry.—Fire has destroyed house and shop at 262, Holton-road, Barry Dock, of Mr. A. R. Green, and damaged adjacent premises.

Galashiels.—A serious outbreak of fire has occurred at Galashiels, where a large section of Hillside Woollen Mill, belonging to Messrs. J. Kemp & Co., was destroyed.

Ipswich.—A fire has occurred at the warehouse of Messrs. Burton, Son, & Sanders, provision merchants, in College-street.

Keighley.—Damage estimated at several thousand pounds was caused by fire at the premises of W. R. Dawson & Co., Russell-street and Sureness-road.

Potter Heigham.—The Decoy Farm, occupied by Mr. R. Long, has been destroyed by fire.

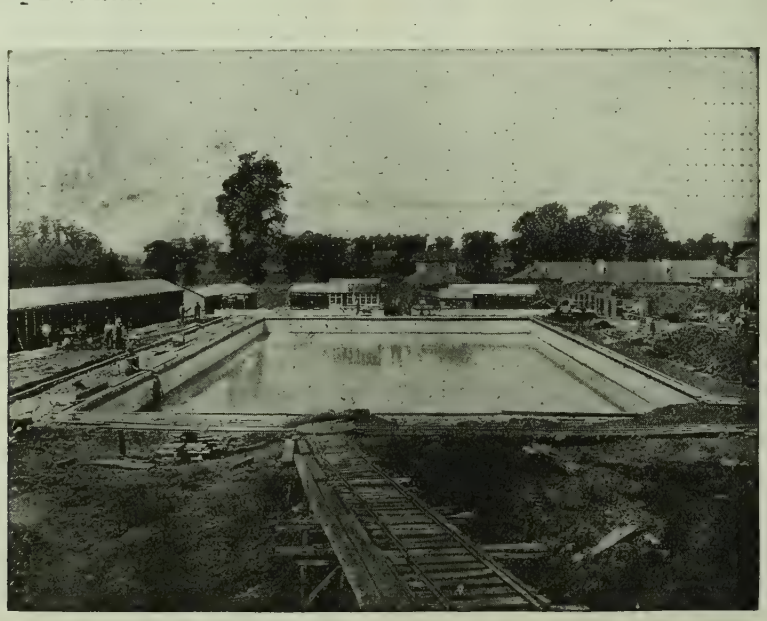
Architects and Builders.

The Pontypool (Mon.) Master Builders' Association has notified the Pontypool U.D.C. that in future members of the Association would not tender for building work unless the plans for same were prepared by a member of either the R.I.B.A. or the Society of Architects. At the meeting of the Council, on July 25, the letter was considered. It was stated that the letter was received as a consequence of architectural work for a neighbouring authority having been done at a reduced rate by someone not a member of the profession. The Council Surveyor, Mr. T. P. Francis, said that he did not quite appreciate what was behind the letter, which he would report to the Surveyors' Institution. The Council resolved to take no action on the letter.



CONCRETE OPEN-AIR SWIMMING BATH AT HARROW.

The new Harrow open-air swimming bath, constructed on land adjoining the Council's housing estate, was opened on July 28. It is situated at the foot of the Hill, and commands a fine view of the old church and the adjacent slopes. The site, which is over 1¼ acres in extent and surrounded by an embankment formed of material excavated from the bath, has been laid out on broad lines. In anticipation of the demand for mixed bathing, ample provision has been made to secure the necessary privacy for the sexes. To this end all dressing cubicles have been separated from the main bath area by grass lawns traversed at frequent intervals by paved footways; ladies being accommodated at one end of the site with their dressing boxes grouped round a sunk turfed lawn divided from the main area by a dwarf retaining wall, and approached by terraces of steps. The bath, which is 165 ft. in length, 75 ft. wide, with a depth of water varying from 3 ft. 6 in. to 7 ft., has been constructed of concrete walls with a backing gauged 1 part Portland cement, 4 parts Thames ballast, and 2 parts sand, and a facing of 4 parts fine gravel screened from Thames ballast varying in size from 1 in. to ¼ in., two parts sand, and 1 part "Ferrocrete" cement to which "Novoid" proofing at the rate of 7 lbs. to each bushel of cement was added to secure a watertight job. The backing and facing to walls were carried up simultaneously, the two skins being separated by 1½ in. mesh expanded metal sheets fixed 6 in. away from the inner face of the wall, and held vertically by wires passed through the meshes of the expanded metal, and a good key with the outside backing secured. As soon as the facing concrete had sufficiently set, the shuttering was removed, and the walls brushed down and thoroughly cleaned with water, then scored with a hard brick and coated with a mixture composed of 1 part white cement, 1 part sand, and 3½ per cent. "Novoid" mixed to a stiff paste, and well worked into the concrete of the wall with a steel float under great pressure, the resultant effect giving a clean, white, uniform face. A buff burmo-ware scum channel and coping surrounds the bath wall, which harmonises well with the face of the walls below.

The floors of the bath are composed of cement concrete 10 in. in thickness, and finished with a layer of fine concrete rendering 2 in. in thickness, composed of 4 parts of fine gravel similar to that used for the facing work of the walls, and 1 part "Ferrocrete" cement to which 7 per cent. "Novoid" was added, trowelled off to a dense, compact mass, and coated with a mixture of Novoided white cement and sand floated to a smooth face.

Ample accommodation has been provided by the erection of 77 cubicles reserved for men, 37 singled and 5 large cubicles for women, with lavatory accommodation, and a combined shower and footbath for each sex. These have been carried out in brickwork, reinforced with "Bricter" in cement, and roofed with "Poilite" roofing tiles. In addition there are two open dressing sheds for boys constructed of timber framework covered with asbestos sheeting, a commodious office of purple brickwork with sand-faced tile roof for administrative purposes, and accommodation for bicycles, &c. It is intended to turf the embankment and approaches and plant trees and shrubs in the autumn, and when these have become established there will be a pleasing contrast which should be very effective.

Mr. J. Percy Bennetts, the Engineer and Surveyor to the Harrow-on-the-Hill U.D.C., and his chief assistant, Mr. F. G. Greenhill, have been responsible for the designing and carrying out of the works, and Mr. Harry Neal, of Northwood, is the contractor. "Novoid," besides making a watertight job, saved the expense in renderings or bituminous coatings for waterproofing, besides the saving of tiles for effective finish.

New Open-Air Bath at Harrow.

TRADE NEWS.

Grange-over-Sands U.D.C. (Surveyor, Mr. Thomas Huddleston, C.E.) has placed the work of resurfacing Main-street, Grange, together with the surface coating of the Windermere-road and Allithwaite-road, in the hands of Messrs. William Shepherd & Sons, Ltd., public works contractors, Milkstone, Rochdale. The surfacing material to be laid is "Asphaltic Slag for Roads," manufactured by the contractors, who are carrying out the work.

Mr. W. H. Cooper, builder and contractor, of 182, Hammersmith-road, W.6, announces that the style and address of the firm have been changed to W. H. Cooper & Son, Latymer Works, 201, Hammersmith-road, W.6. Telephone: Hammersmith 1323.

With reference to our illustration of the 'Victory' Hotel (London) balustrading etc. in the last issue of *The Builder*, we are informed that the marble work was carried out by Percy Webb, Ltd., of Verney-road, Old Kent-road, S.E. The staircase itself is of white Sicilian marble, the stringings bleu Belge, the door architrave red Languedoc marble, while the wall-linings beyond are carried out in bleu Belge and Languedoc marbles.

Boyle's latest patent "Air-Pump" Ventilator has been applied to the Telephone Exchange, Hounslow.

A compact little levelling outfit, which Messrs. C. F. Casella & Co., Ltd., of 50, Parliament-street, S.W.1, have supplied to a good many architects and builders, is described and illustrated in a leaflet just issued by the firm. This level, with the tripod and other accessories, is packed in a very convenient form in an attaché case. The outfit consists of builder's level, telescopic tripod, flexible levelling staff, 50 ft. tape, and a level book.

Cement Prices in Germany.

As from July 17, the maximum prices for cement, per 10,000 kg. without freight and packing, are, for the whole of Germany, 16,773,000 Mks. For retail sales under 10,000 kg., including freight and packing, 15 per cent may be added for sales from works, ship, or wagon, and 30 per cent. from warehouse. The turnover tax is included in the maximum prices.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXV.—No. 4201. AUGUST 10, 1923

ARCHITECTURE AND COMMERCE.

ON another page we review Mr. Gordon Selfridge's book, "The Romance of Commerce," and we take the opportunity of discussing the subject from an architectural point of view.

At an early age the architectural student forms his impressions of commerce which are generally based upon the acceptance of the ambiguous significance attached to the word "commercial." The commercial outlook, he believes, connotes everything that is worst because it forces architecture to conform to conditions which seem to him to be flagrantly opposed to the accepted canons of academic architecture. In his mind, the sequence of thoughts runs something like this: Commerce, commercialism, trade, industrialism, manufacturers, and petty shopkeepers; but the man who commissions an architect to build his city offices and his residence is a merchant prince, a patron of the arts. It is of interest to ascertain whether a man is termed a business man because he looks at things from a practical or common-sense point of view, and whether these qualities entitle us to classify him under the heading "commercial." If these are the qualities which we associate with the business man, there would appear to be a poor case to be argued for the artist and the idealist.

We remember hearing two architects discussing the relationship of art to commerce. One maintained that the wealth of a country depended upon its commerce which provided the money for the encouragement and development of art, the other maintained that it was the work of the artist which enabled the manufacturer to sell his goods. This is an excellent example of a circular argument upon cause and effect, and shows the danger of discussing a subject without regard to first principles. That a great amount of cant is written upon the subject of commerce and art is certain, and when we read that an artist is of the opinion that the public has no real interest in art we should get a truer insight into what he means if he said that the public was not buying his pictures.

The history of commerce makes it clear that wealth in the sense of money and power is based upon commerce, and that the flourishing country rebuilds its cities and becomes the Mecca of the arts. Few architectural students would have difficulty in explaining that the prosperity of the woollen industry in the Middle Ages led to the great era of church building throughout Gloucestershire and Northamptonshire, and in bringing fortunes to the local "woolmen" it gave us the small towns and villages scattered about the Cotswolds, so full of finely-built and beautiful houses. The statement that the commercial outlook makes a man insensible to art is difficult to accept, when history proves quite the contrary. The munificence of the wealthy merchants is reflected in many fine old buildings and a reference to the title pages of some of the old architectural books will show that they were dedicated by humble servants "to the patrons possessed with Power and Wealth who alone are able to execute the Artist's plans." There remains the argument that we have not produced buildings to equal those fine old houses and hospitals of an earlier generation. But is this entirely the fault of the commercial outlook? The loss of tradition is not made good by many years of book-learning, and if commerce sets the problem it is not certain that the architect has always been equal to it.

If we take for granted the philosophic argument in its order—commerce, wealth and art—we have the feeling that there has been a tendency to confuse two quite distinct phases in the relations of commerce to art. No one will deny that many wealthy men spend their money in encouraging the arts, but it is beyond all question that commerce in many of its processes has had the tendency to neglect some of the decencies of life. Manufacturing—or, to adopt the general term, industrialism—is an essential part of modern commerce and trading, and it will be admitted that many of its results are ugly and harmful. It has heaped up dumping grounds of refuse, built rows and rows of ugly houses with tiny back-yards, and produced its goods in cheerless-looking factories and workshops. In short, apart from the Factory Acts for the protection of the workers, industrialism, with all its claims for the necessity for publicity and fine pictures on hoardings to advertise the quality of its goods, seems to have been blind to the ugliness which it creates around its own doors. There are certain notable exceptions, of course, and we are only expressing the thoughts of many when we say that manufacturers would do a greater service to the community by trying to lessen the malign effects of their factories than by advertising so much the purity of their goods. There is a clear distinction in our minds between commerce at work and commerce buying its art treasures.

But there is a tendency amongst architects to assume that they are, to some extent, self-appointed censors of commercial morality; and that architecture should not be debased by being brought into contact with cheap and petty trading, and by being used as an advertising medium. We confess that we cannot follow this line of reasoning. To begin with, no architect is capable of determining whether any article is dear or cheap; it would not be sold if there were not a demand for it, and it may be, and probably is, good value at the price. If we cannot pay the price for silk apparently we must not have cotton, and architecture is to be allowed to have qualms about the pedigree of the articles for sale and the relative values of baby foods, tobacco or beer! Arguing on these lines we might expect another outcry that the petty traders, whose buildings were of the same class as their cheap goods, might, at least, try to forget their commercial instincts for a little and think of other people when they erect their buildings. One has only to look at the standard of design in some of the London streets during the last ten years to prove that an increasing number of merchants and shopkeepers have realised their civic responsibilities, and architecture has responded nobly. That the standard will improve as time goes on is beyond doubt, if architects are able to forget, as a correspondent puts it, "that there can be such a thing as architectural snobbery."

It is evident that a fine building can act indirectly as an advertisement for the merchant, but to our mind there is a certain amount of frankness about the individual who is willing to pay for a fine building and admits that he hopes he will reap the benefit of it during his lifetime. He is more to be commended than the collector of pictures and first editions whose mind runs in the groove of posthumous values. An architectural masterpiece brings no inflated posthumous value to the owner, nor would we like to encourage a world where the dead stifles the living. We can safely leave posterity to deal with the commercial buildings which we hand down to it, and if the race is decadent (as many seem to think) then we will leave some fine records which will express the measure of our commercial age.

"Architectural snobbery" represents a conventional form of thinking which is fatal alike to the architect and to the true development of any living architecture. The essence of snobbery is that many things must be taken for granted, leading to a false standard of values. For instance, no architectural student would hesitate to set down the various qualities he considers should be expressed in a bank—dignity, solidity, and a sense of prestige. These are the architectural qualities which we expect to see in a bank; but it is bad logic to attach these attributes to a bank and deny them to other buildings. The motor-car has had a more marked effect upon the social life of the country than any other factor we know of. It has already altered the outlook upon architecture and the arts, and its influence on the future will be even greater. If we assume that the influence of the motor-car has not been beneficial to architecture, it is neither a sound excuse for designing an ugly building for a motor company, nor a reason for giving to it the highest form of architectural expression. We believe that commerce has set the problem, and if architecture has not in the past always responded successfully, it is chopped logic to say that commercialism is responsible for the bad architecture. We should like to see our factories, workshops and houses invested with a little more imagination and beauty, and we believe there will be a wider appreciation of architecture in relation to commerce when architects can prove to a critical public the excellence of their general judgment on all matters relating to their profession.

NOTES.

A National Memorial.

It is something in its favour rather than a criticism that we are in the tenth year since the declaration of war without a national war memorial being projected. The Cenotaph will harldy be regarded as a national memorial of the war, being more identified with the day of the Armistice. A contemporary, uneasy at the delay which has taken place, suggests that the object should at least be recognised by the appointment of a Commission to prepare plans. But we are more in favour of a legislative than an administrative body in the first instance, one, not to prepare plans, but to decide what sort of memorial is desirable. It is not because of any lack of enthusiasm for what is called the Charing Cross scheme that we hesitate to regard any such desirable improvement as quite occupying the place for such a war memorial. It appears to us that so solemn a commemoration requires something detached from ulterior objects, and to become an end in itself. If it is to concentrate the thoughts of a nation upon itself, commemorating events so vast and terrible in their consequences, attention should be directly, not indirectly, focussed upon it, and though the Charing Cross scheme might include a direct memorial through statuary or other means, its object of creating a very much needed improvement in the centre of London is not quite the one which should be uppermost in our thoughts. There are some who will hesitate to affirm that the present time favours such a national memorial as we suggest, and it is for this reason that our thoughts should first be centred on the consideration of the nature of such a memorial, and the opportunities for getting it, rather than preparing plans. *Festina lente* may well apply in thinking of such a memorial.

Gilbert's Fountain.

The discussion which has arisen concerning this fountain is evidence of the appreciation of the work of a fine sculptor, whose life has suffered, no less than his work, through want of consideration; and it would be more than a graceful act to secure the nearer realisation of the sculptor's aim, which would be still more mutilated by curtailing the space around his fountain. If traffic necessities compel this, its removal to a site offering better accommodation is clearly desirable. We do not think that London would be any the poorer by the removal of the Shakespeare statue from the garden of Leicester-square, and we are inclined to regard the site as admirably suited for Gilbert's fountain. The water playing amid such surroundings would do no harm if the breezes carried its cooling spray on to the surrounding stones, and it offers the advantage that no traffic considerations intervene to suggest practical objections. Though advocated by Sir H. M. Spielman in a contemporary, the triangular piece still unoccupied in front of St. George's Hospital does offer objections on this account, and a more undisturbed area seems clearly desirable. It would be some repayment of a debt of justice to Alfred Gilbert long overdue, one which his brother sculptors should feel most deeply, if they were consulted on the matter, for an artist who has done such fine work for his country should receive the consideration which is due to such service. Too faithful and sensitive for this rough world, we may say of him, as Dr. Johnson thundered back to one who criticised Goldsmith, "Let not his faults be remembered, for he was a very great man."

Canterbury Cathedral.

The controversy that has arisen between the Society for the Protection of Ancient Buildings and Canon Mason, representing the Cathedral authorities, suggests some excess of zeal on the part of the former. It would be a pity if there were failure to recognise the very much greater appreciation prevailing of the need for preserving ancient fabrics, or to direct our criticism indiscriminately. The Secretary of the S.P.A.B. would have been better advised to acknowledge his mistake in mixing up modern masonry with old, as in the case of the northernmost of the western towers, instead of going off on a number of generalisations. Nor can we accept as axiomatic that in the case of worn mediæval work we are never to make good in the sense of renewing. It appears to us that each case has to be settled on its merits, and on practical acquaintance with the conditions prevailing, and that rather worn-out phrases about "spiritless imitation," "puerile efforts," &c., are not very helpful in themselves. To talk of "the dignified making of history in our own times" is not a little self-conscious, and knowing the excellent work done by the Society in the past, if their practical efforts were superseded by a body of "superior" persons, who took more note

Helsingfors Railway Station. Eliel Saarinen, Architect. (*See p.* 204.)

Exeter War Memorial: "The Nurse." MR. JOHN ANGEL, Sculptor.

of theories and phrases than the more useful and practical service they are established to bestow, it would be very disappointing. We are so entirely on the side of the Society in its aims that it is only our desire to see it keep in touch with life that actuates us in the desire that it should avoid any appearance of "intellectual superiority."

Architecture as a Profession.

THE following quotation from Ruskin (which forms the title page to Mr. Gordon Selfridge's book, which we review on page 206) is of academic interest to architects, who no doubt feel that the omission of architecture from the hierarchy of intellectual professions is because Ruskin considered it to be an art:—"Five great intellectual professions . . . have hitherto existed . . . in every civilised nation: The soldiers to defend it; the merchants to provide for it; the pastors to teach it; the physicians to keep it in health; the lawyers to enforce justice in it; and the duty of all these men is, on due occasion, to die for it."

Old Masters.

IT is both curious and interesting to note the changing values of pictures at the recent sales at Christie's. It is difficult to think of old masters without associating them with appreciating posthumous values, but apparently fashions change in pictures as in everything else, otherwise it is difficult to account for the prices obtained for some of them being considerably lower than the prices paid twenty years ago. No one, we suppose, is foolish enough to believe that prices have any relation to art values, and a fall in prices is an excellent corrective to those who have hazy ideas about art and art collectors. It seems difficult to reconcile the high prices obtained for old masters with the general view that money is scarce, but the explanation is simple if we realise that if the stakes are high, so are the profits, as a rule. We may find it a fortunate thing for architecture that it cannot be collected, even if we miss the art jargon of the collector and erroneously assume that the absence of it indicates a lack of interest on the part of the public. When we can dissociate art from humbug it will come as no surprise to us to learn that good prices were obtained for the furniture and china which were formerly the treasured art objects of Bramall Hall, but that the Hall itself has been awaiting a purchaser for eighteen months. Dealers and collectors can only live upon art that can be carried about conveniently, but let us not mistake a form of artistic criticism which embraces both an industry and the joy of the highest bidder. It is difficult to visualise a state of civilisation where architecture became more valuable as it became older, provided the signature was genuine. The hopeless state of civilisation confined to obsolete buildings, the creation of artificial scarcity values, the stifling of modern art, and the position of architecture as a useful art, suggest an ironical treatment which would have appealed to the author of "Erewhon."

Exeter War Memorial: "The Sailor." MR. JOHN ANGEL, Sculptor.
[This memorial was illustrated in our last issue.]

GENERAL NEWS.

Archæological Discovery.

At Catterick Bridge Hotel, near Richmond, Yorkshire, where excavations are being made by Sir Henry Lawson with the object of extending the hotel, the remains of a chantry chapel have been discovered.

Women Surveyors.

Two women surveyors are now working under H.M. Office of Woods on that part of the Crown estates which has been for many years under the receivership of Miss H. M. Jeffery, whose offices are in the neighbourhood of Cumberland Market, Regent's Park.

Glasgow Housing and Health Exhibition.

Many new features will be introduced in the forthcoming Housing and Health Exhibition which the Corporation of Glasgow have arranged to take place in the Industrial Hall, Kelvin Hall, from October 1 to 20. This will be the fifth show of the kind promoted by Glasgow Corporation, and already it promises to be a great success. Applications for space so far have been exceedingly good. Outstanding sections include building materials, sanitary appliances, lighting and heating, decoration and furnishings. The display of goods in all these departments will be such as to warrant a large attendance of the general public. A year ago the Exhibition was visited by many thousands of spectators, and the forthcoming show, in view of its additional attractions, is sure to be much more largely attended.

The Shepway Cross at Lympne.

The Shepway Cross, which has been erected at Lympne, overlooking Romney Marsh, was unveiled and dedicated on Saturday at a Grand Court of Shepway, specially summoned by the Lord Warden of the Cinque Ports (Lord Beauchamp), who has had the cross erected. The cross is on the lines of an old English wayside cross. It consists of a tall shaft let into a base block, which is decorated with the arms of the Archbishop of Canterbury, Lord Beauchamp, the family of Lygon, and the Cinque Ports. The cross bears the crucifix, with figures of Our Lady and St. John, and on the back are the Virgin and Child. It is of Portland stone, and was designed by Mr. F. E. Howard, the work being carried out by the Warham Guild.

Incorporation of Architects in Scotland.

At the first annual prize adjudication, held last week in Edinburgh, under the new prize scheme of the Incorporation of Architects in Scotland, the jury announced their award as follows: The Rutland Prize (certificate and £50) for the study of materials and construction, to Mr. David J. A. Ross, A.R.I.B.A., 25, Richmond-terrace, Aberdeen. The Incorporation of Architects' Maintenance Scholarship of £50 per annum for three years, to Mr. Frederick R. Wylie, 2, St. Mary's-place, Glasgow. The Rowand Anderson Travelling Studentship (silver medal and £100) has not been awarded, none of the designs submitted being considered to be of sufficient merit.

Brighton War Memorial.

With reference to the description of Brighton war memorial in last week's issue, we are informed that the bronze work and engraving were executed by Messrs. Cashmore, Bowman & Co., Ltd.

Working-Class Housing Scheme.

Lord Bolton, of Hackwood Park, Basingstoke, has initiated a scheme to relieve the housing difficulty. To facilitate the building of working-class houses he has allotted frontages on four of the main roads leading out of Basingstoke, and convenient to the centre of the town. Each of the sites covers about a quarter of an acre, and all are on roads which are already sewered, and have water, gas, and electricity services. The sites will be allotted to working men.

Memorial to Welsh Shepherd Poet.

The memorial being erected at Trawsfynydd, to Hedd Wyn, the young Welsh shepherd poet, who fell at Pilkem Ridge, and whose poem to "The Hero" won the choir prize at the Birkenhead National Eisteddfod in 1917, six weeks after his death, is nearing completion. It is a life-size bronze statue of the poet, who is depicted in his working clothes, by Mr. L. S. Merrifield, whose "Williams, Pantycelyn," at Cardiff is already well known, and whose war memorial for the Merthyr Tydvil scholars was shown this year at the Royal Academy. The unveiling ceremony is fixed for to-morrow (Saturday).

Obituary.

The death has occurred of Mr. Robert Alexander, R.S.A., of Edinburgh.

Building Trade Wages.

A meeting of the London Master Builders' Association was held to discuss the request from the Operatives' Federation for the re-classification of the London area, the effect of which would increase the rate of pay in the metropolis. At the close of the proceedings, which were private, the following official statement was issued by the London Master Builders' Association: "With regard to the application which has been made by the National Federation of Building Trade Operatives (London District Council) for the upgrading of the London district, it was unanimously decided at a special general meeting of the London Master Builders Association that no support could be given to the operatives' request for a departure from the arbitrators' award of May 15, 1923."

A delegate meeting of the London Regional Council of the operatives' federation has been convened for this (Friday) evening to consider the reply.

COMPETITION NEWS.

Pavilion, Tunbridge Wells.

Mr. E. Guy Dawber, F.R.I.B.A., has made the following award in this competition:—

First premium, £150, Mr. E. Vincent Harris, F.R.I.B.A., of St. James'-square, S.W.;

Second premium, £100, Mr. Septimus Warwick of 13, Somers-road, Hyde Park, S.W.; and

Third premium, £50, Messrs. Franklin & Deacon, of Luton. These designs are illustrated in this issue.

Halifax.

For the Corporation.—Plans and reports for lay-out of Bull Green site and part of centre of the town adjoining. Premium, £50. Sending in day, October 1.

The conditions of this competition are not in accordance with the regulations, and members of the R.I.B.A. and Society of Architects are advised to take no part in it.

Ellesmere-street Wesleyan New Church and Schools, Warrington.

The Committee has extended the date of delivery of plans in this competition from August 8 to August 15. It is their intention to award prizes to the successful competitors.

Members and Licentiates of the R.I.B.A. are advised not to take part in this competition because the conditions are not in accordance with the regulations of the Institute.

Memorials to the Missing.

For the Imperial War Graves Commission.—Designs of memorials to the missing on four battlefields on the Western Front. Sending-in day, January 1, 1924. (See our issue for August 3.)

Other Competitions.

Other competitions still open include the following (the dates given are, first the sending-in date, and second the issue of *The Builder* in which full particulars were given):—Singapore College (Jan. 1, 1924; March 30). Greenwich Baths (Aug. 25; May 4). Hull Art Gallery (Nov. 5; May 4). Mint competition for plaques (Sept. 30; May 25). Birmingham Masonic Temple (Sept. 12; June 22). Colour scheme (Sept. 30; June 29). Glasgow Pavilion (June 22).

Tunbridge Wells Pavilion Competition. (*See p.* 205.)

CORRESPONDENCE.

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Architectural Competitions.

Sir,—I have been interested in reading the recent correspondence in your columns on the subject of architectural competitions. It appears to me that there can be no question of doubt as to the necessity of reorganising our present system, and hope that the recent election of a progressive Committee at the Institute will provide the opportunity. In the past it has been the prerogative of the President to appoint assessors, and on many occasions when I have been a member of the Competitions Committee the suggestion that a jury of three should be appointed has been turned down by the then occupant of the chair. It would be a popular move on the part of the new President to turn over to the Competitions Committee this out-of-date and autocratic perquisite.

If it is a question of the jury system costing more for fees than the old system, surely it would not be impossible for those architects of eminence who are honoured by being appointed assessors acting in special cases without fees. I think this financial aspect is only an excuse for the retention of an out-of-date system, and I am quite sure that the often illogical and unsatisfactory results obtained in public competitions would be largely eliminated by the adoption of the jury system.

Robert Atkinson,
Director of Education,
Architectural Association.

Sir,—I think the time has come when, in the interest of the profession, a drastic revision should be made in the conduct of architectural competitions. The present system depends for its success upon the assumption that the professional assessor is infallible, and I, as a member of the profession, would be the last to dispute the truth of the assumption! But I am also a member of the general public, and as such can take a wider outlook than as a member of my profession.

The point is, can occasional errors of judgment be further arrested, and can better methods of assessing competitions be devised that will ensure increased confidence in, and be more attractive to, the promoter? I am aware, both from particular and general knowledge, that at the present time there exists amongst promoters or prospective promoters of competitions considerable hesitancy in entrusting the settlement of competitions entirely to a single member of our profession. There is a general feeling that he who pays the piper should at least have a slight interest in the calling of the tune. It is my opinion that the time has come when a system more like the American system might be adopted. Incidentally, I understand that the American system provides for the direct representation of promoters on the board of assessors at important stages in the procedure of the competition. I think that the profession would gain everthing and lose nothing if it were to adopt the panel system of professional assessors, to whom I would add at least two representatives from the promoters. Incidentally, I feel that the selection of professional assessors, which has always been the especial privilege and duty of the President, ought to stand. It is one of his most responsible duties, and, on the whole, he has in the past chosen well. There have been from time to time well-supported recommendations to adopt the panel system, as in France, and the objections are, I suppose, that a panel will not carry out their work in the same responsible way as does the single assessor. It is also advanced that the fees would be excessive. These arguments appear to me to be fallacious. At the worst there will always be found amongst the panel at least one member who will attach that importance to his responsibilities which the case deserves; and as to the smaller fee, surely the honour is, as in France, the chief reward.

The question of representation from the promoters is more controversial. I would suggest that the architects should always outnumber the laymen by at least three to two. The chief objection to their inclusion would then be that very often they might be personally interested in particular schemes; or that their limited knowledge of technicalities would incline them to support the showy and superficial rather than the skilful scheme. It is my view that in practice they will be beyond suspicion as regards a friendly scheme, and that the professional members will easily convince them as to the superficial values of mere draughtsmanship and bad architecture.

The real and important advantage to be gained in allowing the promoters to have a voice in the selection would be that they would at least ensure that the most obvious requirements were met. They would obviate the making of awards mainly on theoretic and remote questions of style and personal feeling as regards architecture; and, most important of all, they would be allowed to feel that at least they had had a share in the selection.

London. S. D. Adshead.

Sir,—Mr. Robertson's article on the above subject is particularly opportune. It would ill become me, as a worker in Cardiff, to suggest that the prevailing method of assessing public competitions has invariably led to bad results, for some of our best buildings owe their existence to that method.

It has been said, however, that there is some good in the worst of us, and, as with men, so with systems. The existing method has doubtless resulted well on many occasions, and certainly any defect caused by it in the work of either assessor or competitor has in the main been effected unconsciously—for all would agree that our assessors have worked the system as well as it could be worked. The fault was not one of individuals, but was inherent in the method. It has left its mark on the history of English architecture, for the future historian will doubtless have to refer to the "competition architecture" of recent times.

And just as there is, no doubt, something less good in the best of us, there will be weak points in the best method of running competitions—for it may well be impossible to devise a perfect scheme. It is even possible that competitions in themselves are inherently wrong, but this possibility is vastly outweighed by the great importance of the competition as an opportunity for less well-known men, and, what is more important, for the development of architecture.

And the jury system certainly seems to eliminate the main defects of the method normal in this country. For, under the jury system, competitors are far more likely to tackle the problem before them from their own point of view, and the promoters of competitions will doubtless prefer to leave the task of settling a design to a jury (on which, in some cases, there might well arise the necessity for appointing experts other than architects), rather than to a single assessor.

In the interests of our profession, I feel, however, that the main advantage of the jury system is the undoubted increase of opportunity which it gives for development in an art which can only take its proper place in life when given the fullest possible freedom for serving the community under changing conditions.

Cardiff. W. S. Purchon.

Our Modern War Memorials.

Sir,—Would Mr. Vale be so kind as to enlighten your readers on the following points raised in his letter? Which is the "largest and most costly memorial" in London, and of what "pagan memorial dating from the fifth century B.C." is it a "complete copy"? Also, what is the meaning of "this has not a single detail to distinguish it from a memorial to the late Mr. Socrates"?

London, W.C. H. C. B.

A Mid-Metropolitan Artery.

Sir,—With reference to my communication in your issue of September 22 last on the above subject, might I point out that at least one of the sections is worthy of consideration whilst the question of work for "unemployment" is under review? One only requires to drive in the vicinity of the Green Park to find out the awkwardness of the cross-communication there. For certain classes of traffic there is actually no access to Birdcage-walk and Victoria-street from Piccadilly and *vice versa* between Whitehall and Hyde Park Corner, and for other traffic the only route is St. James's-street and *via* the Mall. In the proposition above referred to the southern end of the new main artery northwards would be constructed as a sunken road in the Green Park, joining up the Mall, and affording communication with Piccadilly. It might be continued *under* the Mall, and thus afford direct communication with Birdcage-walk for *all* classes of traffic in a north to south direction.

London, W. "O.B.I.T."

HOUSE & HOME BUILDING IN SOUTH AFRICA.

Housing shortage after the great war affected some parts of South Africa very much as it is affecting England. Soldiers who had left home as youths, dependent upon their parents, returned as men requiring homes of their own. Little building had been done in the meantime, and prices had risen with the increased cost of materials and labour. Temporary shacks and huts were erected to meet the requirements of individuals, but this makeshift accommodation was found to be no more suitable there than here. Various forms of steel huts, almost uninhabitable in a hot climate, were experimented with, and their discomfort mitigated by an internal lining of sun-dried bricks.

This serves as a partial protection against the heat, and while it is not in itself a sufficient defence against heavy rain, is sometimes used under the protection of heavily projecting eaves for the exterior walls of one-story buildings.

On the land native and Dutch colonial tradition in building maintains itself side by side with the imported tin hut, and the suitability of the local style generally appeals to the good sense of the intending house builder.

The lucky accident which introduced Dutch and Portuguese settlers to South Africa established a fashion in building forms essentially appropriate in a hot and sunny climate. Familiar with a flat wall style of design in their own lands, they avoided the creation of ribby and spiky structures in the new colonies. Even to this day the skilful management of surface planes characterises the best of South African architecture. The coat of plaster with which it was necessary to clothe walls built of mud or sun-dried brick, and the light colours which proved useful in refracting the sun's rays and keeping interiors cool, were utilitarian elements of design which have proved of the utmost advantage to architecture in preserving breadth and simplicity which have been sympathetically interpreted in the works of Mr. Herbert Baker and his partners. In a town-planning scheme at East London these qualities are developed in comparatively inexpensive houses designed by Mr. Clifford B. Stocks.

Ten houses have been sold to the occupiers at something like their cost price of £1,100—£1,200, others are let at £8 per month. The houses are detached and stand in small gardens, and the accommodation consists of a living-room, sitting-room, kitchen and three bedrooms, with bath-room and offices. A verandah or stoep shelters the hot north side of the house, and supplies that play of shadow, shade, and reflected light required to build up the artistic character of an elevation suited to a brilliant climate.

ELIEL SAARINEN.

By CAROLUS LINDBERG.

In judging Finland's part in cosmopolitan achievements in the sphere of art and culture, Eliel Saarinen must be mentioned amongst the foremost in the ranks of creative artists. It is not only because he has gained victories both at home and abroad in very close architectural competitions that we are obliged to pause at his name, but also because of the esteem due to a strong artistic personality, whose capabilities, when keeping the broadness of his creations in mind, must be measured by wider standards than is ordinarily the case.

The artistic development of Eliel Saarinen is, briefly, as follows :—During the last years of the last century a group of young and spirited architects, animated by a boundless enthusiasm for their work and a firm confidence in themselves, rose in order to combat the architectural style of the preceding decades, a style lacking in independence and a slave to given forms. The spirit of the age and the enthusiasm received from lands possessing an older culture stimulated the reformers to seek the origin of their creations in their own country, and thus, during the first years of our century, the so-called "new style" based on romantic foundations, took form in Finland as elsewhere.

The name of Eliel Saarinen is intimately linked with the events of this period of architectural development. Together with his nearest friends and fellow-workers, amongst whom Armas Lindgren and Herman Gesellius should be particularly mentioned, he started an architectural office, to which rather important works were soon entrusted, and these were executed and fulfilled according to the principles born on the waves of this new style of architecture. Amongst their works may be mentioned the small, but, in respect to the development of style, quite significant exhibition-pavilion at the World's Exposition of Paris in 1900; certain private and business houses in Helsingfors; the chief mansion on the Suur-Merijoki estate, executed even in the smallest detail according to the spirit of the age; and the artists' home on the shore of Lake Hvittrask, near Helsingfors, in a solitary place of virgin beauty, where the architect now lives with his family. Very typical, although more subdued, is the National Museum in Helsingfors, also a creation of this office.

The frame within which this in many respects fruitful, and in Finland's architectural history very curious and significant, tendency created its product was, nevertheless, for an artistic nature like Eliel Saarinen's, despite its elasticity, too narrow by reason of its limited choice of motives and its style without a foothold in the present time. On account of circumstances, and also because of his own innate force, Saarinen soon withdrew from the narrow proportions and form-scale of the romantic style at home in his struggle for a broader, more personal, independent style, free from traditions; a struggle for cosmopolitan art values, the characteristics of which are a severe systematical grandeur, tranquil monumental lines and an abstract choice of motives for the decorative details. Already in the Hague competition for the Palace of Peace, in which Eliel Saarinen had been invited to take part, he created designs, whose monumental composition attracted attention as compared with many tedious designs, based on former historical styles. In the creation for which he gained the first prize in the competition for Finland's Parliament House, to be situated on Observatory Hill, he further developed the personal tendency of his style, founded almost entirely on the impressions of severe, straight-lined proportions, the monumental effect of which is enhanced by the concentrated result of decorative motives, which is characteristic of Saarinen. The town halls of Joensuu and Lahti, and particularly the large railway station block in Helsingfors, further illustrate this later tendency of Eliel Saarinen, which has sometimes been so severely and trivially criticised.

Typical of this artist is his many-sidedness.

Eliel Saarinen.

Amongst other art interests he has been successful as a portrait painter, and has also devoted himself to the art of town planning and town building. It is also quite natural that a man of his type should be inspired with enthusiasm for creative work on a large scale, where the aim is not limited to the designing of individual houses but where the specialist is offered the direction of the development of entire communities, with their practical as well as artistic organisation. In a couple of excellent plans Saarinen has explained and forecast the development of Finland's capital, Helsingfors, from an artistic point of view, as to town building. The scientifically-appropriate, and at the same time artistically-luxurious, plan for regulating the large building estate of Munksnäs-Haga suburbs and the later-composed general plan of Greater Helsingfors, have an incontestable place amongst the best artistic town plannings of this century.

Through its individuality—free from local influences—its standard and its character Eliel Saarinen's art in Finland represents the architectural tendency according to the measure of cosmopolitan proportions. Many an inter-

The Large Hall, Villa Keirkwer. Eliel Saarinen, Architect.

national competition where his building or planning designs have been victorious in a close competition, or where his expertness has been called upon, have raised his name to the rank of the most prominent architectural artists. He gained a prize in the competition for the new capital of Australia, and he was recently placed second in the competition for the skyscraper for the *Chicago Tribune*. The future will prove the significance of the creative work which he is now pursuing in America. Even at present it may be asserted that he has found surroundings suitable to the measure of his capacity as to the character and scope of his tasks.

TUNBRIDGE WELLS PAVILION COMPETITION

Following quickly on the result of the Bournemouth Pavilion competition, we have that of the Tunbridge Wells Pavilion, and again find illustration of our modern architects' lack of sympathy or imagination adequate to the occasion. In both places it seems to us that a building of a heavy monumental type was undesirable, but more especially is this the case at Tunbridge Wells, where the site lies in a somewhat narrow valley surrounded by trees (see p. 202). Such a building as is proposed is, we believe, hardly expected to pay its way, but a good deal is possible in the way of making it attractive and pleasant, and one would have been inclined, to think that its exterior might with advantage have been largely an affair of loggias and balconies with possibly ground floor accommodation for teas. One may assume it would have considerable attraction as a place for concerts, lectures, meetings and dances in the winter, and to get the most out of it the two-fold aspect of winter and summer use must be well considered. Even a place with such natural advantages as Tunbridge Wells cannot afford to stand still, and a beautiful little valley like that in the Calverley Gardens suggests much greater possibilities than the mere dumping down of a solid square building in the middle.

The problems to be solved by the competitors were as follows :—

Levels.—The site is a valley running uphill, and consequently all surrounding views of the pavilion were to be obtained from higher ground, necessitating a simple outline for the building.

Tea Room.—This had to be readily accessible from both the pavilion and the grounds.

The Bandstand.—This had to be placed on the north side of the hall so that it could be used for either an internal or external audience.

Cost.—A sum of £25,000 to provide for a building containing 2,000 people exclusive of the tea room, &c., necessitated very strict economy of plan throughout, and precluded the treatment throughout from being anything but of a very simple character.

We regret that the rejected designs were so quickly on their way back to their owners, and, that we were, therefore, unable to form any opinion about them, but we are told there was no one amongst them with any marked outstanding advantages over the selected design. The three premiated designs are illustrated this week. The design placed first is a well-thought out scheme which can, the assessor states, be carried out for the sum specified.

There were several difficulties to face in this competition, and the apparent inadequacy of the suggested expenditure was a grave one if a good building was to be obtained on an open site, which is not only to be viewed all round, but very largely from higher levels than the main floor; in the latter regard parapet walls are not very pleasing, and some sort of roof garden or open-air restaurant would have been more agreeable as a crowning feature. In its more lightsome treatment it must be admitted that the design placed second rather scores over the others. One of the conditions suggests that a considerable portion of the northern and southern sides of the hall should be thrown open in the summer months and in this respect also the second premiated design stands more favourably. The level plateau round the building is an essentially good point in the first placed design, though some corrective to this is obtained in both the other premiated designs.

The conditions called for a concert hall to accommodate at least 2,000 with commodious entrance hall, a bandstand on the northern front to be available for an inside or outside audience, a stage for 60 to 80, dressing rooms, green room, music store, office, chair storage, a refreshment room for about 150, and cooking arrangements for tea and light refreshments, lavatories and cloak rooms. The cost was limited to £25,000, to include everything except furniture. There seemed to be no provision for compensation to the selected architect if the work is not begun within twelve months, but if the tendering comes out at more than 10 per cent. above the architect's estimate it is provided that he may receive no payment beyond the premium.

It may occur to some of our readers who know Tunbridge Wells that a competition with more elastic conditions might have suggested a more attractive scheme. As we see it, such a site as the Calverley Gardens has great possibilities, and though a really good comprehensive scheme need not have been carried out at once, something finer and better might have been elicited had the imagination of competitors been left free to evolve what such a beautiful site suggests.

The following is from the report of the assessor, Mr. E. Guy Dawber :—

"I have visited the site and made a thorough inspection of the ground, especially with a view to the various aspects, levels and position generally, and the author of the design placed first submits a well-thought out and straightforward scheme, and I consider it the best solution of the problem. The plan is economical and well-arranged, and there is no wasted space. The tea-room can be entered from the main hall and also from the grounds, and the gallery, approached through the main hall, has ample entrances and exits. The elevations have been broadly treated, are simple and dignified, though perhaps slightly austere, for an open-air pavilion and restaurant. In execution it might be advisable to increase the size of the upper windows lighting the hall, but these are mere details that do not affect the scheme. My quantity surveyors have checked the cubicle contents of this design, which they find correct and, in my opinion, this is the only one of the three selected designs that could be executed to-day within the stipulated amount of £25,000.

Plan for Suburb of Helsingfors. Eliel Saarinen, Architect.

BOOK REVIEWS.

The Romance of Commerce. By H. Gordon Selfridge. (London: The Bodley Head. New and Revised Edition. Pp. 422. 10s. 6d. net.)

Mr. Selfridge has chosen an excellent title for his book, for it is evident that he loves his calling, and that he spells Romance with a capital R. The first chapter—Concerning Commerce—is exceedingly interesting in that it reveals the author's views upon commerce in general. He tells us that from the beginning of time all men have been merchants in some form or other, that commerce creates wealth and is the foundation of the great State. In saying that we are all merchants he points out that though we give this title exclusively to the man who buys and sells merchandise, the artist sells his pictures, the writer his books and ideas, the teacher his knowledge, the doctor his intimate knowledge of the human body and his experience, and the lawyer his legal knowledge. "The preacher, the lecturer, the actor, the estate agent, the farmer, the employé, all, all are merchants, all have something to dispose of at a profit to themselves, and the dignity of the business is decided by the manner in which they conduct the sale." This is a frank statement which everyone would do well to consider.

Mr. Selfridge deals faithfully with the snobbery of those who consider commerce to be undignified and mean. The absurdity of this social convention is exposed, and if the list of kings, princes, and parliaments who were wise enough to encourage trade is not considered sufficient, the chapter on Trade and the English Aristocracy may be helpful to those who have a more intimate knowledge of Debrett than of the fundamental principles of political economy. "It is not Commerce which often makes the individual merchant narrow, mean, and dishonest. It is the man himself who undignifies Commerce to the extent of his influence. It is not the law which makes the little, tricky, unscrupulous lawyer, it is the man himself, and it is generally he who makes men so hate that profession." To our mind the social gradation of snobs amongst themselves signifies nothing, so long as we can be assured that the way is left clear for better men to do the work. Up to this point snobbery as a social convention automatically eliminates those who are almost bound to be unsatisfactory, and commerce gains to this extent. The difficulty, as it appears to us, is that commerce must of necessity come into contact with professionalism, and if absurd notions (they cannot be defined as principles) are allowed to come into the question it is certain that the whole conception and expression of commerce is mutilated.

Mr. Selfridge traces the history of commerce through the ancient civilisations of China, Phœnicia, Assyria, Babylonia, and Greece. By about 500 B.C. the commerce of Greece had reached considerable dimensions, and we read that her wealth came to her almost entirely through the medium of trade. Trade and trade alone, we are told, raised Venice to her high position as the capital of a proud republic, mistress of the world's commerce, and the centre of art and architecture. It is interesting to read that in the days of Doge Delpino (1356-1361) a decree was passed which forbade "any Venetian noble to embark on commercial pursuits." Evidently the leaven of snobbery was beginning to work, and it is significant that doges and senators were drawn from the ranks of merchant princes, that the aristocracy was an aristocracy of trade, and that gradually trade and with it the prosperity of Venice declined. Mr. Selfridge describes the romance of commerce in its relation to the development of countries, cities, and the arts, and the romantic history of famous families and individuals who rose to fame as merchants and traders. He clearly establishes his contention that the prosperity of a country depended upon its commerce, and that the guardian of trade became the guardian of the arts. "Where wealth is greatest, everything else being fairly equal, arts thrive the most."

It is interesting to read that in early days merchants were their own bankers, and that the so-called banks up to the end of the seventeenth century were really pawnbrokers. The inauguration of the Bank of England in 1694 is thus an important landmark when we bear in mind the enormous importance assumed by the banks of to-day. If modern commerce could not exist without the banks, it is equally true to say that the banks could not exist without commerce. The circle is quite limited, yet cause and effect have become so obscured that the majority of people never consider whether trading conditions are controlled by the banks or *vice versa*.

It may be a surprise to many to read that the early years of British trading "were burdened with an overweight of unsatisfactory dealing"; that there was cheating in buying and selling corn, shoes, and clothing; that traders sold short measure and used illegal weights; and that petty tricks were the common practice of the thirteenth century. It is certain that no great and lasting commercial success has ever been built on dishonesty, and it is evident that honesty had not come to be regarded as a policy in the early days of British commerce. Mr. Selfridge comments on this: "The absence of permanency, or of the desire to build a business for the future made it easier to get as much as possible from each customer."

We should have liked to see a chapter in this book dealing with the growth of limited liability companies, and the tendency towards the formation of large combines. There is a doubt whether combines are in the best interests of the country, and we have the impression that the collective and, in a sense, soulless outlook of a combine has a more deadening effect upon architecture than the individualism of the merchant. Mr. Selfridge tells us that the early merchants were—amongst other things—manufacturers, miners, and shipowners, and it would have been interesting to read his comments upon the development of what is now commonly termed industrialism. We have in mind the fact that industralism has, in the past at least, given little or no consideration to the amenities of life. It is to Mr. Selfridge's lasting credit that he has given us a building which fully expresses the fine ideals which he holds upon commerce.

It is ungenerous on our part to ask for more in a book which is already large and represents a vast amount of research and interesting information. It is evident that it has been a labour of love for the author.

Back to Prosperity. By Henry Lowenfield and Margaret Lowenfield. (London: Effingham Wilson. Price 5s. net.)

The financial disturbance due to the Great War has resulted in the publication of many books suggesting a number of reasons and remedies. It is natural, we suppose, to look for remedies when health is bad; it is a totally different matter accepting the rules for maintaining good health. The trouble with most of the books we have read upon economics is that we are presented with a bewildering number of contradictory remedies which create a suspicious feeling that cause and effect are becoming thoroughly mixed. The one thing which is clearly evident from past experience is that the remedy—if there is one—must either be difficult to isolate or complicated in its application to this industrial world. Otherwise it is difficult to account for the position we are in to-day. The title of this book is alluring, but we doubt if it will help us far on the way by itself. Nevertheless, the book is original whether we agree with it or not, and we welcome this further sign that the subject is receiving wide attention, and hope that some useful light will be thrown on the problem.

Modern Organ Building. By W. & T. Lewis. (London: William Reeves. Price 15s. 6d. net.)

This volume is a highly technical treatise on organ building, profusely illustrated with diagrams showing structural and mechanical details. It contains an account of the effects of harmonics and material on tone quality, goes fully into the questions of tuning, voicing, and blowing, and includes a description of the various stops. The architect would probably like also to see some figured plans, sections, and elevations of typical church organs, and to be given some hints as to fixing and as to the best positions for an organ from the acoustical point of view; but the book is essentially intended for the student of organ building proper, and it does not touch the wider questions involved in the arrangement of church interiors or other buildings designed to receive organs. Musicians are agreed that the orchestra is unduly weak in the bass, a weakness from which the organ is free; the organ builder always appears to err in abusing this freedom, and to provide notes so deep that they cease to be heard as sounds at all and degenerate into mere pulsations. Such pulsations are "notes" only on paper, and one is constantly at a loss to understand why the organ builder goes to the trouble and expense of producing them, since they are, to the writer at least, highly distracting and unpleasant. We find the authors referring to a 32 foot stop, the four lowest notes of which are said to have cost £800, and these notes must all have been well below any note to be found on the piano, and yet one would have thought that the compass of the latter instrument was amply sufficient. The book is well indexed, and the diagrams throughout are prepared in a careful and workmanlike way, giving evidence that trouble has not been spared in their preparation.

The Law and Practice of Rating and Assessment. By Clarence A. Webb, F.S.I. (London: Crosby Lockwood & Son. 1923. Price 15s. net.)

This volume is described on the title page as a handbook for overseers, members of assessment committees, surveyors, valuers, and others, and, as the author explains in his preface, the work is also designed to be of assistance to occupiers and owners of rateable property as well as to officers of public companies, students, &c. The first edition appeared in 1910, and we then expressed the opinion that it would prove a valuable addition to the libraries of those it was intended to assist, and but for the war we imagine a second edition would have been called for before this. However that may be, this edition appears at a most opportune time for, as the author says in his preface, it is generally recognised that the present is a particularly difficult time for general reassessment owing to the operation of the Rent Act, yet it is generally felt, owing to the lapse of time in most districts since a revision was made and the changes that have taken place, that new lists must be prepared.

One of the features of this work is the table of cases with reference to the reports in which they appear, as this is often omitted in other than text books by lawyers, and there is also an index so copious that we congratulate ourselves on discovering any omission, but the Increase of Rent Act does not appear in the Index, although it is dealt with in the Preface and referred to at page 204 in the text. The subject is presented in a clear and attractive form, and this edition of a most useful handbook brought thoroughly up to date will be welcomed.

Tunbridge Wells Pavilion Competition.

We illustrate this week the three premiated designs in the Tunbridge Wells Pavilion Competition (of which Mr. E. Guy Dawber, F.R.I.B.A., was the assessor), by Mr. E. Vincent Harris, F.R.I.B.A., Mr. Septimus Warwick, F.R.I.B.A., and Messrs. Franklin & Deacon respectively. A review of the designs submitted in the competition is given on p. 205.

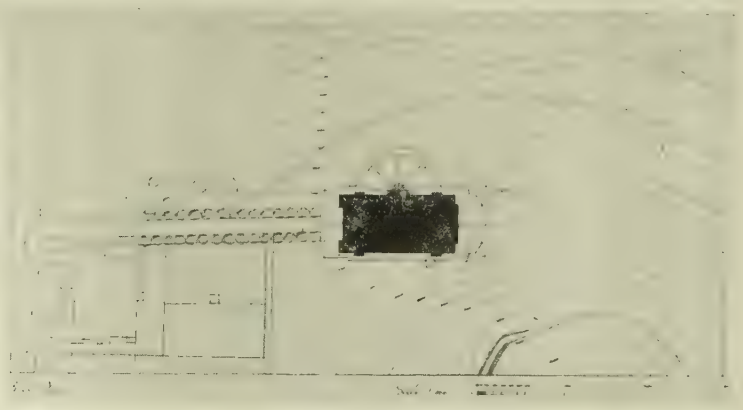
Memorial Chapel, Mount St. Mary's College, Chesterfield.

The design for this chapel was influenced by the fact that it was desired to incorporate an existing two-storied wing of the college, consisting of the present chapel with a large dormitory above. This wing has been gutted internally and converted into the new nave; while the dome, transepts and sanctuary, &c., are being added at the east end, and also an ante-chapel, with choir and organ gallery over, at the west end to complete the scheme.

The exterior is being faced with silver-grey bricks and Portland stone dressings, with roofing of specially-made Italian tiles, while the outer dome and lantern will be covered in copper. Both inner and outer domes, with the lantern, are being constructed of reinforced concrete.

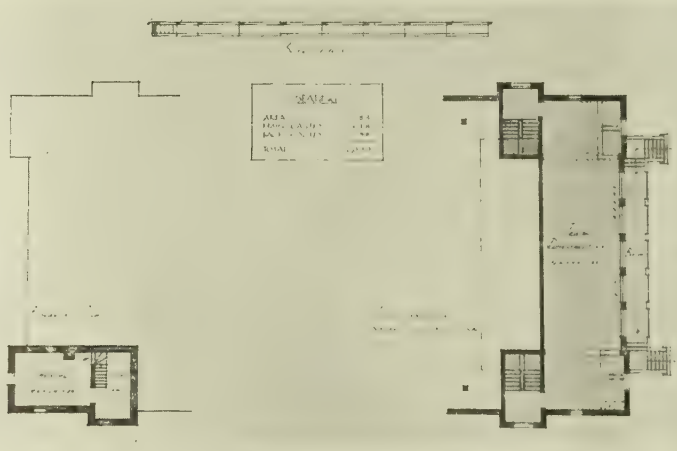
The internal stonework is of brown Hornton stone, which will show dark against the plaster and emphasize the early Italian character of the work. The decorative frieze will be in Della Robbia ware in subdued colours; while the altar and reredos will be of marble, together with the sanctuary paving.

The general contractors are Messrs. Geo. Longden & Son, Ltd. (Neepsend, Sheffield). The silver-grey bricks are being supplied by Mr. J. C. Edwards (Ruabon), and the Portland stone by the Bath and Portland Stone Firms, while the brown Hornton stone is from Messrs. J. F. Booth & Son (Banbury). The Italian tiles for the roof are from Messrs. Ames & Finnis (37 and 38, Strand, W.C.2); and Messrs. Ewart & Sons, Ltd. (Euston-road, N.W.) are responsible for the copper roofing for the outer dome and lantern. The marble paving in the sanctuary will be the work of Messrs. John Stubbs & Sons (Liverpool).



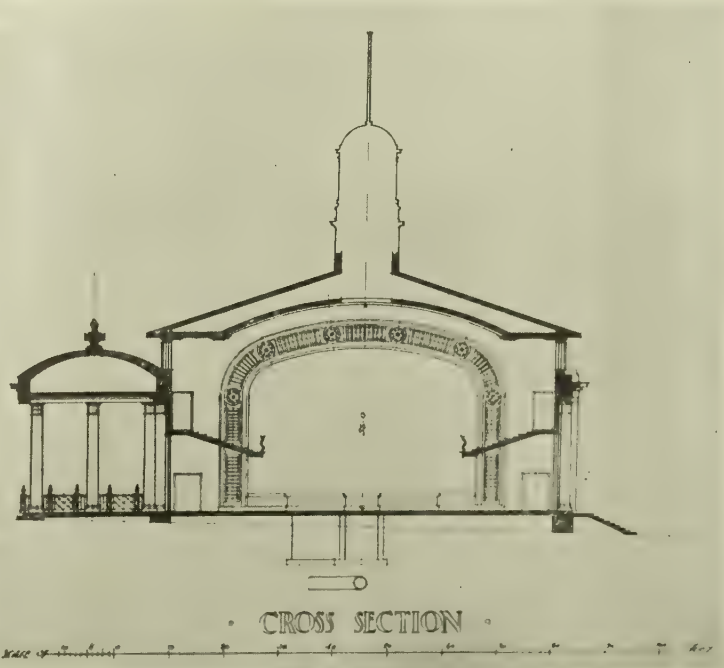
Nos. 210 to 216, Old-street, Finsbury, E.C.

The premises illustrated on p. 212 have been erected for Messrs. Charles Churchill & Co., Ltd., of 15, Leonard-street, E.C., machine tool factors and manufacturers. They comprise a working floor area of 24,000 super ft., and in addition a large superficial area forming the roof flat. The floors are very lofty; the basement, which is exceptionally well-lighted, being 15 ft., and the ground floor 18 ft. in height.



Two lifts are installed, one externally, serving all floors and roof flat, carrying a 1-ton load; and a small goods hoist internally; provision has also been made for a passenger lift in the well of the main staircase. There are two staircases. The floors and roof are of fireproof construction, and the elevations are faced with artificial Portland stone. The tower at the angle encloses the main staircase from the third floor to the roof flat. The estimated cost of the building is £70,000.

The following contractors and sub-contractors were employed, viz.: General contractors Messrs. Holland & Hannen & Cubitts, Ltd.; stonework, &c., The Patent Impervious Stone Co.; steelwork, Powers & Deane Ransomes; lighting and glazing, T. & W. Ide; asphalte, International Asphalte Co.; heating and sanitary work, Davis Bennett & Co.; lighting, Duncan Watson & Co.; wrot.-iron work, Joseph Stone.



The architect is Mr. F. Lindus Forge.

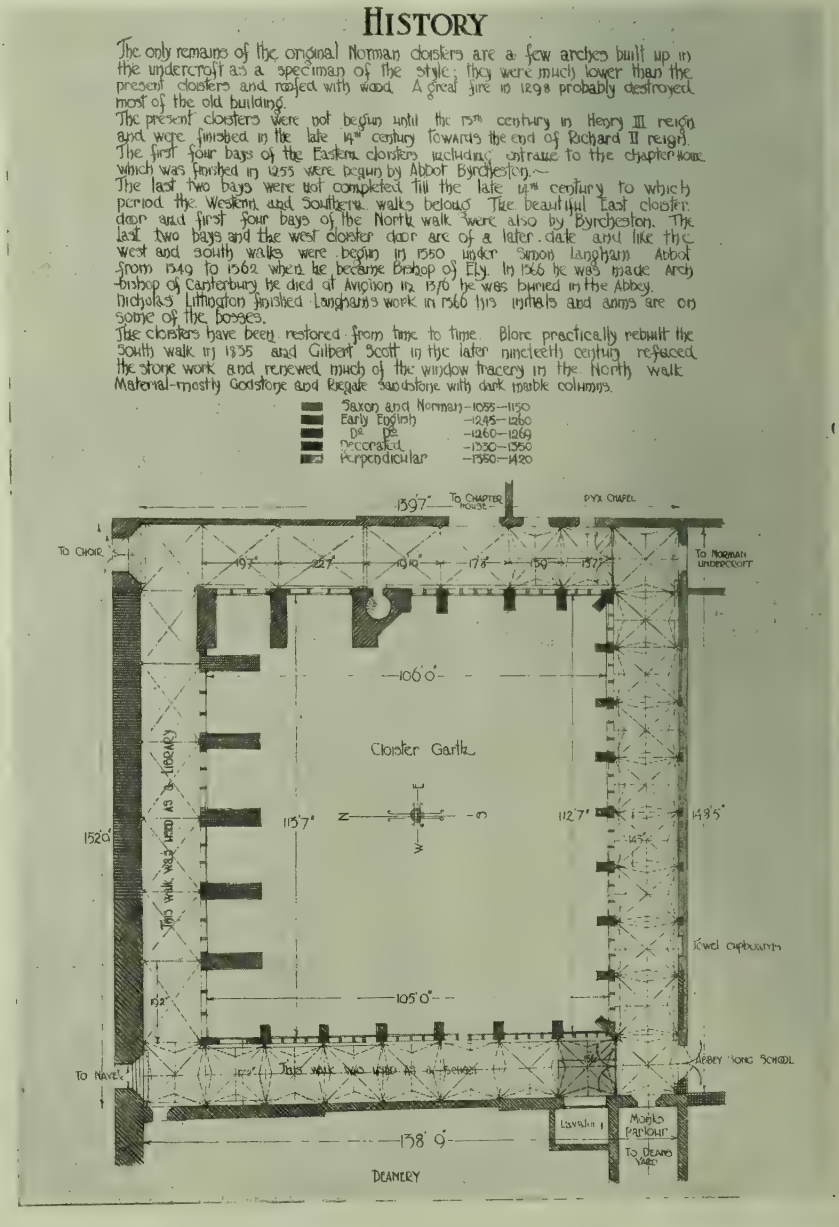
BRITISH ARCHÆOLOGICAL ASSOCIATION CONGRESS AT YORK.

By REV. P. H. DITCHFIELD, M.A. F.S.A., Hon. A.R.I.B.A.

The British Archæological Association, which is entitled to call itself "Venerable," held its 80th Annual Congress from July 2-8 in the city of York, under favourable auspices. Founded in 1843, it has contrived, sometimes with difficulty, as during the years of war, to hold its Congress every year without intermission. There can be no more attractive field for archæological research than the great capital of the North. It has played a prominent part in the history of the country in all ages. It contains antiquarian remains of every period. It was known to the Romans as Eboracum, a small city, rectangular in shape, only 540 yds. by 480, surrounded by stone walls erected by the Emperor Trajan. To-day we can see parts of those Roman walls, the lower parts of the multangular tower, memorial slabs, statuary, monuments, pottery, stone coffins, tiled and brick graves and much else that bears witness to Roman occupation. Saxon, Dane and Norman have all left traces of their presence, and Professor Freeman asserted that Eboracum holds a place unique in the history of Britain, shared only by one other city north of the Alpes, namely, Treves.



In the wide area covered by the excursions there is a great wealth of antiquarian treasure, fine examples of simple Norman churches, some of the most famous Abbeys in the Kingdom, Fountains, Rievaulx, Byland, Selby, Ripon Cathedral, Beverley Minster, which is worthy of being a cathedral.

Again we were fortunate in our officials. The Association is favoured by having a "perpetual" President, Mr. Charles E. Keyser, who for 17 years has acted in that capacity, and to whom the Association owes so much for his kindliness, generosity, and tact. We were also fortunate in our local secretaries, the Rev. Alfred Hunt and Dr. W. E. Collinge, D.Sc. The headquarters were established at The Royal Station Hotel, York, and the Yorkshire Philosophical Society readily placed its rooms at the disposal of the Association.

The Congress opened after luncheon on July 2 with a visit to York Minster, which has been so often described that it is unnecessary to tell its story here. The well-known ruins of St. Mary's Abbey, York, were visited, which was the first Abbey founded in York after the Conquest. Close to the Hospitium, Dr. Collinge pointed out the watergate which gave access to the staith or landing. The remains of St. Leonard's Hospital were noticed nigh the entrance to the grounds of the Philosophical Society, and the Multangular tower also was noticed, the lower part being Roman, the upper Mediæval. After dinner the members were invited to a reception at the Mansion by the Lord Mayor and Lady Mayoress, Alderman and Mrs. J. B. Inglis.

An early start was made, and the members enjoyed a tour rich in interest to the archæologist, probably the richest in the county of Yorkshire—that lying between the city and the beautiful ruined Cistercian Abbey of Fountains. Nun-Monkton Church was the first stopping place. The singular design of the west front, considered by architects to be a gem of architectural construction, was described by Mr. P. M. Johnston, F.S.A., and the interior by the Rev. E. Clopton Illingworth, vicar. The west front is well known by all students of architecture, and was built between the years 1190 and 1200, the upper part being Early English and the lower part Norman. It presents some remarkable features. The doorway is perfect, and one can notice anticipations of the ball-flower ornament in the cone-shaped ball. Above the door is a trefoiled niche, and there is much rich ornamentation, enriched zig-zag ornament, and capitals adorned with some peculiar and local ornamentation differing from what one finds ordinarily. The three Early English lancet windows above the doors are enriched by dog-tooth, and were inserted about 1210 A.D. This west front is figured in Parker's "Glossary," and described as "of very singular design, perhaps unique, remarkably elegant." There is a gabled pediment. The tower windows are square-headed and trefoiled, and there is a curious corbel table above them. On either side of the doorway are round-headed niches, in one of which remains a mutilated figure. On the south side are three doorways, the westernmost, called the Nuns' Doorway, is rich Transition-Norman. The central is walled up, probably the door of the Prioress; the easternmost or priest's door has been restored. These doors probably opened into a cloister.

The journey was then continued to Knaresborough. We admired the beautiful situation of the town perched upon a rock overlooking the fair valley of the Nidd. It is a "castle-town," owing its origin to the once proud castle, the remains of which few of the party saw. The Church, dedicated to St. John the Baptist, was described by Mr. Arthur Gibson, A.R.I.B.A. It has nothing very remarkable, and is mainly an Early English building with later additions. The lower part of the tower was built in the thirteenth century, the upper is later. There have been three eras of building, first in Norman times, then in the thirteenth century, and lastly in the Perpendicular period, when in 1450 the nave, consisting of four bays, was erected. It was restored in 1872. There is a record of a consecration in 1343. The east window was inserted in 1320, but the chancel is Early English, and on either side is a chantry of the same period. In 1230 it was created a prebend of York Cathedral. In the chantry chapel on the north side are the monuments

Plan of Cloisters, Westminster Abbey.

Northern Polytechnic School of Architecture: William Woodward Travelling Studentship, 1923. First Prize Design, by Mr. S. Smith (First Year Student).

of the Slingsby family of Scriven, one of the great Cavalier families of Yorkshire. We noticed two monuments of the Roundell family in the south chantry, and the Perpendicular font with its Jacobean cover. Two notable events occurred in the history of the town, the two Scottish raids. One took place in 1318, when the Northern freebooters plundered the town, and when the inhabitants fled to the tower of the church for refuge, and piled up timber around it in order to drive them out. It is said that the red-tinged stone on the west front is a mark of this attack.

After Knaresborough came Ripley, a very interesting church in a charming little town. The church is rather puzzling. According to the published guide the present church was built by Thomas Ingilby, grandson of Sir Thomas Ingilby, the Judge, about A.D. 1400. Mr. Johnston considers that it was built in 1195-1200. In Murray's Guide it is described as decorated with later additions. It consists of nave, choir, and two aisles. The door is interesting, a good example of rough carpentry, and it has curious wrought-iron C hinges. The chancel was rebuilt in the fifteenth century, and this may account for the statement that the whole church was erected in 1400. The groove for the boarding of the rood is discerned, and in the south aisle there is an early screen. A hagioscope or squint exists in the south wall of the chancel. In 1567 we are told that the walls of the nave were raised and five clerestory windows inserted on each side. A considerable restoration took place in 1862, when new roofs and windows were added, square pews, and much else. The screen and choir stalls were put in in 1885.

The most notable object in the church is the tomb of Sir Thomas de Ingilby and his wife. The Knight is represented in armour, head resting on the crest of his arms, the boar's head and neck couped, his shield bearing the star and a lion at his feet. His wife wears the dress of the period (1369). Round the sides are shields bearing various coats of arms, and "weepers," representing the children of Sir Thomas and his wife. The curious thing is that their names are given, William, John, Thomas, Henry, Alicia, besides a priest and a monk. This Sir Thomas was Judge of Assize in 1351 and one of the Justices of Common Pleas in 1361. The Ingilby family have held the manor for 600 years. Oliver Cromwell stabled his horses in the church after the battle of Marston Moor, doing great damage to this tomb, upon which he caused to be carved:

"No Pompe nor pride—
Let God be honoured."

In the churchyard is a curious weeping or kneeling cross. The pedestal only remains, and round the lower block are eight deeply cut niches, intended for persons to kneel. This cross is very rare, and is supposed to be about seven hundred years old.

On the east wall are bullet holes caused by Cromwell's soldiers when they executed some Royalist prisoners after the battle of Marston Moor.

The drive was resumed and we passed on to Ripon Minster and Cathedral, which was described by Mr. Johnston. Ripon did not become a Cathedral until 1836, when the diocese was carved out of that of York. Though not a Cathedral of the first magnitude or splendour, yet it is a stately structure and greatly superior to many of our ecclesiastical structures. This, in very brief, is the story of the building. Mr. Johnston pointed out the work of several periods, which may be thus summarised:—

Saxon: Crypt.

Norman (1070-1100): Portions of chapter house, vestry, and crypt below.

Transition (1154-1181): Three bays of north side of choir, portions of nave, piers adjoining west and central tower, transepts.

Early English (1215-1255): West front and west tower, vaulting of chapter house and windows.

Early Decorated: Two eastern bays of choir and east window.

Perpendicular: South and east sides of central tower, east side of wall of south transept, two bays of south side of choir, nave (except the west bays adjoining the towers).

After luncheon at the Spa Hotel the party proceeded to

Fountains Abbey,

where Canon Garrod, of Ripon, gave an exposition of the ruin. He said that the Abbey was founded in 1132 by thirteen monks from York, who passed two years in great poverty. In 1135 they were joined by Hugh, a wealthy Dean of York, who enabled them to begin the first building of the Abbey. The remaining portions of this are the nave and transepts of the church, the west wall of the cloister, and the sub-vault of the monks' dormitory. A great misfortune befell the rising Abbey, as some knights of York came and burned it in 1147. However, the Cistercians were very persistent and persevering, and three years later began building again. The chapter house and parlour and the eastern guest house were completed in 1160; and during the next ten years the northern half of the cellarium and the western guest house, and after 1170 the warming house, frater, and kitchen, and lay brothers' infirmary. During 1203 to 1220 the presbytery was built by John of York, who was also the builder of the nine altars and cloister arcading (now wholly destroyed) and monks' infirmary. The monks seem always to have been adding to their beautiful home. In the late thirteenth century they built the infirmary chapel and malthouse; in the fourteenth the infirmary kitchen, conduit house, abbot's lodging, and in the fifteenth century Abbot Durnworks inserted Perpendicular windows in the west and east ends, also the nine altars, while his successor, Abbot Horby, placed north and south windows in the nine altars, and erected the tower. Almost to the end the monks were building and improving their house, but the end came in 1539, when it was suppressed, and sold to Sir Richard Gresham, and pillaging and ruin followed. Such is the story of the Cistercian Abbey, one of the finest in the kingdom.

We wandered through the Norman nave and admired its beauties. A blocked doorway led to the lay brothers' quarters, which were screened from the monks in the Minster. The rood screen stood by the seventh pillar, and the retro-choir was for infirm monks. The central tower fell and was rebuilt just before the Dissolution by Abbot Horby. Some earthern pots were discovered where the stalls stood. Many conjectures have been made about their use, but it is certain now that they were for resonance or acoustic purposes. The doorway in the south transept led to the monks' dormitory, and there were two chapels in this transept. The nine altars were the gem of the Abbey, as at Durham. Each one had its own piscina and drain, and were divided by stone walls, afterwards by wooden partitions. The lancets were original, but Perpendicular windows were inserted later, and the windows of the abbot's pew were seen on the south. The nine altars was a favourite burial place for the abbots, 19 of whom were buried there.

We continued our peregrinations to the calefactory, the only room in the Abbey which was heated, and then into the refectory, which was a large room, the vault being supported by two rows of pillars. A crucifix hung at one end, and the pulpitum whence the reader read at meals, the book-closet, serving-hatch, and the holes from the calefactory, whence some heat passed into the chamber, were pointed out.

Hence we drove to Aldborough Manor House, where we were hospitably received by Sir Thomas and Lady Lawson Tancred, who entertained us to tea in their charming home. In the absence of the President, Mr. Ditchfield expressed the thanks of the members. Aldborough is the Roman Isurium, the most interesting Roman station in Yorkshire, and has been pronounced to be "one of the most important in the kingdom." In the grounds of the Manor House many relics have been found which are stored in a museum in the garden. Several cottages and the inn have museums of their own, and for a small charge their owners exhibit Roman pavements and other relics. The time did not permit of any close inspection. In the garden of the Manor House Sir Thomas pointed out the fragments of a stone cross which he had rescued from destruction.

Boroughbridge.

A visit was paid to the three remarkable "menhirs" or standing stones known as the "Devil's arrows," for which Boroughbridge is famous. Mr. William Dale, F.S.A., gave a brief address on these monuments of antiquity, which he said were not the work of the Druids, the Romans, or the Saxons, but were of a type well known in many parts of the world, and were megalithic monuments of the Neolithic or Newer Stone Age, and must be put back to a period two or three millenniums before the Christian era. The last place visited was

Kirk-Hammerton Church,

a complete Saxon fabric with later additions, where not only the nave but the chancel retain their original dimensions and with few alterations, their original masonry. In 1891 a new nave, chancel, and north aisle were added to the Saxon fabric. This, with its western tower, forms the south aisle and chapel of the new church. The plan is of the simplest character, and the structure appears to be all of one date. The masonry in the lowest courses of the south wall of the nave is composed of extremely large blocks of stone. It is probable that the fabric is of later Saxon origin on account of the recessing of the chancel arch.

WEDNESDAY, JULY 4.

The company started out again at 9 a.m. The first stopping place was

Sheriff Hatton Castle,

a high-towering formidable ruin, once the stronghold of the powerful family of the Nevilles. The present building is the remains of an Edwardian castle, though a Norman fortress stood here, erected by Bertram de Bulmar, Sheriff of Yorkshire, in 1140, from whom the place received its name. The present castle was built by Ralph Neville, first Earl of Westmorland, about 1410, and Leland wrote that "no house in the north so like a princely lodging." We then passed on to

Kirkham Priory Ruins.

It was founded in 1121 for Augustinian Canons. The founder was Walter de l'Espee, who endowed the Priory with lands and privileges. The principal feature is the fine gate-house, which was originally Transition-Norman, and the small rooms on either side are of that date. The archway was rebuilt in the Early Decorated period by William de Ros, and bears several shields—Clare of England, Plantagenet, three arms of Ros and Vaux. The niches formerly held figures, but only two remain, and one alone can be identified—that of St. Bartholomew—and the other is probably St. Philip. We noticed also a sculpture of St. George and two figures fighting, which are variously interpreted to be either David and Goliath or a Ros fighting a Scot. Of the Priory Church the only remains are the base of the south wall and the nave and a single lancet of the choir with shafts and capitals. The cloister court remains, indications of the chapter house, which was small and of which little is left, the gable of the refectory, and the north wall with a Transition-Norman door-

way, a lavatory of later date of excellent design, and the wall of the dormitory on west of the cloister. The ruins were excavated in 1886. They are very little known, and few visitors ever come to see the place. It has always been a very lonely country, and the nuns of a neighbouring nunnery used to keep wolf-hounds to guard against robbers and outlaws. Thence the company drove to

Old Malton,

a Priory founded in 1150 for the rare Order of Gilbertian Monks. Here we were met by the Vicar, the Rev. W. Ingram, who gave an excellent account of his church. He said it was a fragment of a once glorious Minster. The Gilbertian Order stood alone, and was a purely English Order, founded by St. Gilbert. He was a man of apostolic zeal, and led a severe and rigid life. The order consisted of monks and nuns, the former following the rule of St Augustine, the latter of St. Benedict. It has been supposed that he was buried here, but the real place of his sepulchre was Sempringham. The Order spread rapidly and at its suppression it had twenty-six houses. Old Malton was founded by Eustace FitzJohn in 1150, who also gave to the Order the church at Wintringham, the village of Linton, the church at Brimpton, and other endowments.

Mr. Johnston remarked on the beauty of the church and its extraordinarily interesting history, and pointed out the triforium, consisting of alternating quatrefoils, like Hexham. There was a survival of Norman detail in the scallop form of the capital, an elaboration of the cushion capital, somewhat similar to the Kirkstall corbel. He remarked on the Early English corbels adorned with flowers, the Perpendicular style of the north side, the octagonal piers with a series of niches, the beauty of the plain mouldings on the arches, resembling those at Ripon, and the late Norman west doorway. The next stopping-place was

Pickering,

a very ancient place, which boasts of a castle and great Lancastrian stronghold, still belonging to the Duchy of Lancaster. In the year 1851 some wall paintings were accidentally discovered during some repairs. The whole wall was then stripped of its covering, and careful copies made in colour of the subjects. They were then covered up again until 1879-89, when Mr. Jewett completed the task of removing the coating of yellow wash. Their treatment in 1851, and the affixing of monuments had damaged the lower part of St. George's body, the representation of Herod's feast, the lowest scene of St. Catherine's life; the death and the Assumption of the Blessed Virgin Mary, and in these cases restoration on the old lines, where possible, was necessary. The paintings originally done in tempera have in some parts been retouched in oil. The party then journeyed to

Bainton Church.

Lastingham,

with its memories of Early Northern Christianity. As Iona is associated with St. Columba, and Lindisfarn with St. Chad, this is connected with St. Cedd, Bishop of the East Angles. The crypt is the most interesting part of the church. It is untouched and unrestored, and although some have associated it with St. Cedd, it is doubtless the work of the Benedictines in 1088. The President discussed the question, and came to the conclusion that the cushion capitals were erected between the years 1068 and 1088. There are small circular-headed windows, with deep internal splays. Two small stone crosses with interlaced carving and a portion of a larger one—all Saxon—with a portable altar, are preserved here, and some carved woodwork. We drove on to

St. Gregory's Minster, Kirkdale,

where we were received by the vicar, the Rev. F. W. Powell, who has written a well-illustrated guide to his church, which is doubtless in the hands of most of the members. He first pointed out the famous sundial, now placed over the doorway; it tells the story of the church in early times: "Orm Gamel's son bought S. Gregory's Minster when it was all broken and fallen and he let it be made anew from the ground to Christ and S. Gregory in Edward's days the King in Tosti's days the Earl."

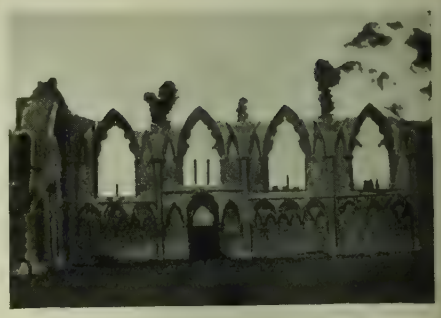
The central panel has on the dial:

"This is day's Sun marker at every time";

and at the foot:

"And Hawark me wrought and Brand priests."

From this we learn that the Minster was built in the seventh century and was destroyed by the Danes. Orm was Lord of Kirkdale, and Tosti was brother of Harold, who was slain at the Battle of Hastings. The church was rebuilt between 1055 and 1064. Mr. Powell then showed another monument of great antiquity—the coffin lid of Ethelwald, King of Deira 642. The inscription is in runes, but these are so obliterated that it is almost impossible to decipher them. Another stone with interlaced sculpture is said to be the coffin lid of Bishop Cedd. The church was until recently much disfigured by square pews and other unsightly accessories. Kirkdale is one of the latest survivals of distinctively Saxon art in the North of England. The north aisle was added at the end of the twelfth century. The tower is new, but the Saxon arch leading to it from the church remains. In the tower walls are some Saxon grave covers.



Helmsly church and castle time compelled us to pass, and at length we found ourselves at

Rievaulx Abbey,

the first Cistercian Abbey in Yorks and one of the most beautiful ruins. It is unnecessary in these notes to recount its history. We were much struck by the great work that is being done by the Office of Works. Much excavation has been done, under the charge of Mr. Peers, the Inspector of Ancient Monuments, and disclosed several chapels in the nave, the chapter house, and much else. The work is in progress, and most important discoveries are being made. (For a description and illustrations of the work see *The Builder* of July 13 last.)

Byland Abbey

was also visited, and we greatly admired the appearance of the immense rose window and other architectural beauties. It is the property of the nation, and is being restored by the Office of Works, under the guidance of Mr. Peers. Some beautiful tiles have been unearthed, and excellent examples of curious stonework. They are particularly clean, and Mr. Johnston suggested that they had been treated with stone pickle.

St. Mary's Abbey, York.

THURSDAY, JULY 5.

This day was devoted to the study of York itself, where many days might have been spent in examining its antiquities. The first building visited was

The Merchant Adventurers' Hall,

where we were received by Dr. Maud Sellers, who by birth bears the proud title of "Merchant Adventurer" and is a Fellow of Newnham College and Historical Lecturer at Sheffield University. This learned lady has a great affection for the Hall, a fourteenth-century structure, has studied deeply the history of the Company, and accomplished wonders in rescuing the building from decay and neglect. After inspecting some of the city churches, under the guidance of Mr. George Benson, A.R.I.B.A., we returned to the cathedral to examine the

Stained Glass of the Minster,

under the able guidance of the Rev. F. Harrison, one of the Vicar's Choral or Minor Canons, who has made a most careful study of the glass, which is being restored at a cost of £28,000. Mr. Harrison then conducted us to the curious and sad-looking Bederne Chapel, dedicated to the Holy Trinity. Mr. Hunt tells us in his programme that the name is derived from "bede," to pray, and "erne," a detached dwelling. It is the chapel of the College of Vicars Choral of the Minster. The College was founded in 1252, and the vicars worshipped therein and had a common dining-hall. There were thirty-six vicars, and the chapel had a chantry founded by Thomas Ottley. Some of the glass dated back to the fourteenth century, and £1,400 was paid to five priests. In 1868 the Ecclesiastical Commissioners took charge of the property, and the last service was held in this chapel. Since then it has fallen into decay. In 1919 it was not safe to enter it. £1,000 is needed to restore it.

The afternoon was spent in visiting the York churches and in attending evensong at the Minster; after which the party were entertained to tea at the Mansion House, by the kind invitation of the Lord Mayor and Lady Mayoress. After dinner the President delivered a well-illustrated lecture on "Beverley, Selby, and other places to be visited by the Association."

FRIDAY, JULY 6.

There is so much to see and to report on in this "county of broad acres" that it is necessary that the rest of this chronicle should be brief. Our programme on this day was considerably altered, and we first found ourselves at the church of

Kirby Underdale,

a small structure of early date on the slope of the dale. Indeed, there is a pre-Christian stone representing a Roman soldier, which connects the village with Roman times. The original church was pre-Conquest, consisting of a nave, tower, and apse, and no aisles. The walls have been stripped of plaster, a very undesirable proceeding, against which war should be continually waged. However,

this has revealed some herring-bone work which may be evidence of Saxon work. In the twelfth century aisles were added. The chancel is new, and the church was restored by Street in 1870, at the cost of Lord Halifax and the rector, the Rev. T. J. Monson. It was pointed out to me that the old font is in the churchyard and used as a drain-head. Can such desecration be possible? I hope I was deceived.

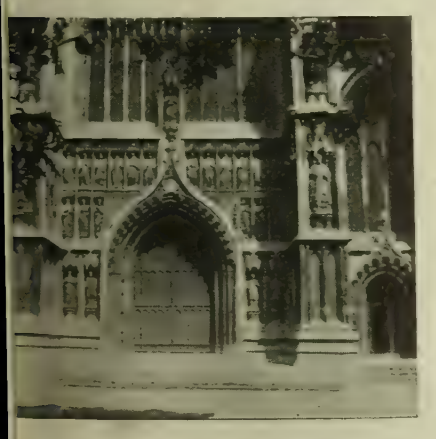
Passing on to

Kirkburne,

we found one of the most interesting churches in Yorkshire, which would require a long description. I must content myself with remarking that its architecture is Late Norman, much enriched. The chancel has been rebuilt. The font has been supposed to be Saxon, but it is really Early Norman. It has two series of sculptures, divided by a twisted band of ornament. In the upper row is depicted the Ascension, the Baptism of Our Lord, the presentation of the keys to St. Peter—twelve figures in all, some of which cannot be identified. In the lower there is the Agnus Dei, St. John Baptist, and quaint figures of animals which cannot be interpreted. There is a man carrying an axe, and another with a club. The church was described by the vicar, the Rev. A. J. Parkes.

Bainton Church,

the next stopping-place, is a good late fourteenth-century structure with Norman font. It has some Jacobean screenwork, and one of the finest brasses in Yorkshire—that of Sir Roger Godeale, rector in 1382. He has a chalice and wears amice, alb, apparel, stole, maniple, and chasuble. There is also the remarkable effigy of Sir Edmund de Manley, who died in 1314. He has a tonsured head, and was excommunicated for shedding blood in a church. He fought in the Battle of Bannockburn, and was drowned in the retreat after the battle.



We then visited

Beverley,

and saw first the wonderful church of St. Mary, and then the still more beautiful Minster. These have been so often described by architects and are so well known that any account of them is unnecessary. We next journeyed to the very remarkable Late Norman church of

North Newbald,

in the middle of the Wolds, consisting of nave, central tower, transepts, and chancel, but no aisles. The chancel has been rebuilt. There is much evidence of zigzag ornament. Perpendicular tracery has been inserted in the east transept windows, but most of the windows are pure Norman of the date 1120. It is evident that the same gild of masons was employed in building the fine series of Norman churches in this part of Yorks.

Beverley Minster: West Front.

Goodmanham

was the scene recorded by Bede of the conversion of King Edwin and Corfi, the pagan priest, by Paulinus. The church is Early Norman, with a depressed chancel arch on which are traces of colour, the capitals being of unusual design. The font is said to have been that in which Edwin was baptised, but that is not so. It is Early Norman, and Edwin was baptised at York. There are two low side windows, which are rare in Yorkshire, and a squint. The mounds of the Saxon hall, the scene of Edwin's conversion, are still seen. We had a glimpse of the church at Londesborough, with its interesting Norman doorway, sundial, Early English font and tombs of the Cliffords and Boyles with armour hanging in north aisle; and then passed on to

Nunburnholme,

which has a Norman church much reconstructed. The old chancel arch has been removed to the west end. The chief object of interest is the Scandinavian cross in the churchyard, which was described by the Rev. F. C. M. Morris, son of the Rev. F. O. Morris, author of the "History of British Birds." Professor Collingwood pronounces it to be of the date the first quarter of the eleventh century, but it is probably much earlier. Want of space forbids a description. Returning to York, after dinner we heard a very interesting lecture by Mr. J. A. Knowles on "Stained Glass Windows."

The present writer was unable to accompany the last day's excursion on Saturday, July 7, which included visits to Stillingfleet, St. Helens, Cawood, Riccall, Skipwith, and Selby Abbey, and the length of this article prevents any further description of these places. The Congress may be pronounced to have been one of the most successful in recent years, and those who were fortunate enough to take part in it will retain many pleasant recollections of their wanderings in Yorkshire.

LAND FOR ROAD WIDENING.

Mr. Howard Martin, Official Arbitrator, sitting at Plymouth, heard a claim by Alfred Yeo, Evelina Yeo and James Biscombe against the Mayor, Aldermen and Burgesses of the Borough of Plymouth, concerning the compulsory acquisition by the latter of a piece of land containing 32,768 square feet, situated on the Tavistock-road, Plymouth, forming part of the Hartley Estate, together with lodge and premises erected thereon. The land has been acquired for road widening purposes at Hartley-hill.

The Official Arbitrator's award is as follows:—"That the Acquiring Authority is to pay the claimants the sum of £2,572 as compensation, including the sum of £315 agreed to be paid by the Acquiring Authority to the claimants in respect of works to fencing and gateways rendered necessary by the widening; it being further agreed that the Acquiring Authority in forming the slope of the cutting for the widening is also to form retaining walls to sustain the slope where necessary and to maintain the same at its own expense for two years from the completion of the slope and retaining walls, and I order the Acquiring Authority to pay the stamp duty and each party to pay its own costs."

A Decorators' Exhibition.

The Decorators' Exhibition, which is to open at the Holland Park Hall on October 17, is not a commercial venture, but is being organised by the master decorators themselves, through their National Federation, to stimulate interest in their craft and its doings.

Beverley Minster.

THE WEEK IN PARLIAMENT.

Westminster, *Wednesday.*

Housing Bill.

The Royal Assent has been given to the Housing (No. 2) Bill.

No Restrictions for New Houses.

Mr. Ede asked the Minister of Health what restrictions he intended to place on the price, whether for sale or letting, that might be charged by persons building houses with the assistance of public money under the Housing (No. 2) Bill.

Mr. N. Chamberlain said it was decided that no such conditions should be included in the Bill, and he did not propose to require the adoption of such conditions by local authorities.

Shortage of Bricklayers.

Sir W. Davison asked the Minister whether he was aware of the great shortage of bricklayers and plasterers throughout the country, whereby building operations were hampered and in some cases stopped and unemployment caused; and what steps were being taken to increase the number of bricklayers and plasterers and secure increased facilities for the training of apprentices.

Mr. N. Chamberlain said he was aware that there was some evidence of a scarcity of bricklayers and plasterers, although this hardly amounted to a "great shortage." The question of the provision of a sufficient supply of skilled workers in the building trade was one in the first place for the employers' and workers' organisations to consider, and he had no doubt that those organisations had the matter in mind.

New Houses Sanctioned.

Mr. N. Chamberlain said that approvals had been given to date in respect of 21,052 houses. As local authorities were not required to submit plans and full details when an application for subsidy was made, it was not possible to state the number of each type of house at the date of approval. Monthly returns of progress would, however, be obtained from local authorities and these would show the numbers of non-parlour and parlour houses being erected under approved schemes.

Tree Planting.

Mr. D. G. Somerville asked the Minister of Health whether he would urge on local authorities the desirability of tree planting on an extensive scale this winter, not only because of the value to the health of the community of this policy, but also to help existing unemployment.

Mr. N. Chamberlain said that local authorities had no general powers to undertake tree planting, except as incidental to the making of parks and roads and other works which they were authorised to undertake.

Summer Adjournment.

Parliament rose on Thursday, August 2, and will reassemble on Tuesday, November 13.

TOWN PLANNING: MODEL CLAUSES.*

MODEL clauses have recently been issued by the Ministry of Health for the guidance of local authorities in respect to town-planning schemes entered upon under the Housing, Town-Planning, &c., Acts, 1909 and 1919. Some salient features are given in these pages, but while these may help to indicate the general scope of the schemes, we recommend those interested to study the clauses in full. Broadly speaking, the new town-planning schemes are designed to remove the growth and development of towns and suburbs from the vagaries of chance and to allow of co-ordination and ordered expansion by bringing the area concerned within the jurisdiction of its local authority, and by allowing the relaxation of obstructive and antiquated by-laws, provision being made for appeal to the Minister of Health in the event of disagreement between owners and local councils. That these model clauses would, when adequately filled in, enable local authorities to exercise a wise control in almost every direction admits of no doubt. Powers are given to fix zones and densities suitable for residential, industrial, and other purposes; to establish building lines of sufficient elasticity to avoid monotony and to meet special circumstances; to combat the evils of smoke and noise; to restrict offensive advertising; to preserve existing trees, and to provide for reasonable parks and recreation grounds. We wish the Ministry had made definite recommendations in many cases where they have merely left blanks, for it must not be forgotten that the problems presented in preparing a town-planning scheme are new to many of our smaller authorities, and without experience to guide them they may find themselves in difficulties when it comes to making definite stipulations. It is, however, of supreme importance that expert advice should be sought in the preparation of schemes, and the Ministry no doubt had this in mind in preparing the skeleton model.

The clauses are to be regarded as subject to periodical revision, where experience dictates, and they are drafted on the basis of a scheme for an area wholly within the district of the local authority preparing the scheme, and will need adaptation to cases where the area is partly outside the district of the preparing authority, and more than one authority is concerned, or to other special features of a scheme. It will, of course, in practice almost always be necessary for a number of adjoining authorities to act in consultation, since, however well one district may be planned, it cannot function properly if treated as an entity not joined up in harmony with its neighbours. Local authorities have never been confronted with so heavy a responsibility as in the preparation of their town-planning schemes, and we feel confident that the large majority will spare neither time nor trouble in bringing them into efficient service.

It will be through the administration of these schemes that the English principle of decentralised local government will justify itself or stand condemned. Local Bumbledom can be quite as obstructive and reactionary as centralised bureaucracy, and it is essential that all ratepayers should learn to realise the importance of local elections. The habit of letting things slide and automatically leaving in office the same people year after year is too common and spells death to initiative and progress. While we are aware that our local authorities, taken as a whole, are fully alive to their opportunities, at the same time, in certain smaller towns, where the authorities and citizens are supine and indifferent, we can but be apprehensive of the fate of town-planning schemes, unless considerable pressure is brought to bear by the central authority.

The following are extracts from the model clauses:—

Restrictions upon Street Sites.—(9) No building shall be erected or other work done upon any land coloured pink on the map which, for the purpose of enabling street works to be executed, would require to be removed, pulled down or altered, except with the consent of the Council, and upon such terms and conditions with regard to such removal, pulling down or alteration, or otherwise as the Council may require.

Submission of Schemes of Development of Estates.—(1) Whenever a plan for a new street is submitted to the Council for approval, they shall by written notice request the owner of any land within that part of the area, the development of which will, in their opinion, be affected by the construction of the street to furnish them with plans and particulars showing generally a scheme for the development or laying out of the land. (2) Before approving the plan for the new street the Council shall take into consideration any plans and particulars which are furnished to them by any such owner within a reasonable time to be specified in the notice, being not less than one month from the date of the notice.

Relaxation of By-laws.—(1) Notwithstanding any provisions of the by-laws and local acts to the contrary, the Council may permit the construction of a new street—(*a*) of any one of the types described in the first schedule to this scheme; or (*b*) of such other type as the Minister may from time to time authorise the Council to permit: Provided that permission to construct a street of any one of the types described in the said Schedule shall be given only if, in the opinion of the Council, the street is not likely to be required for through traffic, and it shall be a condition of such permission that—(i) no buildings other than dwelling-houses or such public buildings (as respectively defined in clause 17) as the Council may approve shall be erected in the street; (ii) any portion of the surface of the street not constructed as carriage-way or footway shall be planted with grass, trees, or shrubs or treated in some other suitable manner to the reasonable satisfaction of the Council; (iii) any turning space which is required by the conditions set out in the schedule shall be of such dimensions that a circle with a diameter of 30 feet could be inscribed within the carriage-way of the street. (2) In the case of any street proposed to be constructed upon any land coloured pink on the map, the Council may, if they think it desirable that a part of such street should be constructed in advance of the remainder of the street, themselves construct such part, or may permit such part to be constructed, of a less width than is required by the by-laws and local acts. (3) In determining appeals made to him under Clause 10 the Minister shall have the same power of granting permission as the Council under this Clause.

Grass Margins, &c.—(1) The Council may lay out as a garden, any part of a street repairable by the inhabitants at large, or may plant any part of such street with grass, trees, or shrubs and erect guards therefor, and may maintain, alter or renew the part of the street so laid out or planted. (2) The Council may from time to time, rearrange the carriage-way, footway, and other parts of the street. (3) Where the Council execute street works upon any street declared under clause 6 of this part of the scheme, the Council shall plant with grass, trees or shrubs, or treat in other suitable manner any part of the street not constructed as carriage-way or footway, and shall provide convenient access from the carriage-ways and footways to any premises abutting on the street, and shall execute any works necessary for fencing off the street from the adjoining lands or for replacing any fences removed.

Adjustment of Boundaries of Streets.—For the purpose of adjusting the boundary of any street, the Council may make an exchange of land forming part of the street for other land, with or without paying or receiving any money for equality of exchange.

Buildings and Building Lines.

Interpretation.—In this part of the scheme, unless the context otherwise requires, the following expressions have the respectiv meanings hereby assigned to them:—"Dwel ing-house" means a house designed for use a a dwelling for a single family, together with suc outbuildings as are ordinarily required to b used therewith; "Residential building" mean any building, other than a dwelling-hous designed for use for human habitation, togethe with such outbuildings as are ordinarily require to be used therewith, and includes a hotel an a residential club; "Shop" means a buildin designed for the purpose of carrying on reta trade; "Industrial building" means a buildin designed for use as a factory or a worksho within the meaning of the Factory and Work shops Acts, 1901 and 1907, and includes a war house, and a "building for noxious industry means an industrial building designed for th purpose of carrying on any industry mentione in the third schedule to this scheme; "Busines premises" means a building designed for use a an office or for other business purposes, not bein a shop or industrial building; "Place assembly" means a building designed for use a a town hall, theatre, concert room, lecture hal place of public worship, or other place of publi assembly whether used for purposes of gain not, and includes a non-residential club "School" means a building designed for use a a college or school; "Institution" means building designed for use as a hospital, work house, asylum, or other public or charitabl institution, other than a place of assembly a school; "Public building" means a place assembly, institution or school; "Specia building" means a building designed for any us other than one of the uses for which the building hereinbefore defined are designed; "Zone means a portion of the area shown on the map b distinctive colouring, hatching or edging for th purpose of indicating the density or character buildings prescribed therefor, and the term "density zone" and "character zone" mea zones indicating restrictions as to density an character of buildings respectively. A "lan unit" means a portion of land to be determine by the Council in accordance with the provision of this Part of the Scheme for the purpose limiting the number of building units [as calcu lated in accordance with Clause 18 (3)], whic may be erected thereon.

The erection of a building includes:—(i) Th re-erection, wholly or partially, of any buildin of which an outer wall is pulled down to within ten feet of the surface of the groun adjoining the lowest story of the building, an of any frame building so far pulled down as t leave only the framework of the lowest story (ii) The conversion of a building of any of th types hereinbefore defined into a building any other of such types. The curtilage of building includes the site of the building.

Combined Buildings and Building Units.—(1) Where a proposed building is designed fo use both as a shop and as a dwelling for a singl family, it shall be treated, for the purposes o this part of the scheme, as if it were a shop (2) Subject as aforesaid, where a proposed build ing is designed for more than one use, th Council may decide for which of the uses th building shall be deemed to be designed for th purposes of this part of the scheme, and th Council may decide that the building shall b deemed to be designed for different uses fo different purposes of this part of the scheme (3) For the purposes of this part of the scheme a dwelling-house shall be reckoned as on building unit, and a building other than dwelling-house as such number of building unit as the Council may decide. (4) The owner o any building or of the site of any propose building who feels aggrieved by a decision o the Council under this clause in respect of th building or proposed building may appeal to th Minister.

Primary Zoning.

Density of Buildings—Erection of Dwelling houses and Residential Buildings.—No dwelling house or residential building shall be erecte upon land not included in a land unit.

Declaration of Land Units.—(1) Subject to th following provisions the Council shall, upo

* "Town Planning—Model Clauses." (London: H.M. Stationery Office, Imperial House, Kingsway. 1923. Price 1s. 6d. net.)

application being made to them by any owner of land or jointly by two or more owners of adjoining land, declare that the land in respect of which the application is made or such part thereof as they think fit shall form one or more land units. For this purpose the submission by an owner of a building plan shall be deemed to be an application for the declaration of a land unit in respect of the land included in the plan. (2) The Council may include in a land unit land belonging to the applicant other than that to which the application relates, but shall not, except with the consent of the applicant, so include the curtilage of a building commenced before . The Council may also include in the unit any land given by or acquired from the applicant for the purpose of a public open space or allotments after. . (3) The Council may require the applicant to submit a plan showing the whole of his land which is not already included in a land unit or such part thereof as they think fit. (4) Every land unit shall be contained wholly within one density zone. (5) No land unit shall exceed seven acres in extent. (6) The half of the width of any road dedicated to the public upon which any land proposed to be included in a land unit abuts shall be included in the land unit.

Calculation of Number of Building Units which may be erected.—(1) In the case of a land unit in respect of which a plot plan is not submitted to and approved by the Council under the next succeeding clause, the number of building units on the land unit shall not at any time exceed the number which will give the average per acre specified in the table below. For this purpose all buildings included in the land unit by consent of the owner under clause 20 (2), shall be taken into account.

Zone.	Average number of building units per acre over a land unit not to exceed
Zone A, coloured on the map	
Zone B, coloured on the map	
Zone C, coloured on the map	

(2) Where it appears to the Council upon representation being made by any owner of land that it would be unreasonable to require compliance with the provisions of this clause owing to difficulty in developing the land in accordance with those provisions on account of: (i) The lay out of any street on or adjoining the land constructed before; (ii) the small amount of land in the possession of the owner on , the Council may authorise a reasonable increase in the number of building units permitted to be erected on the land affected.

Plot Plans.—(1) Any owner of land within a land unit may, for the purpose of having the number of building units permitted to be erected on that land determined prior to sale or for any other reason, submit for the approval of the Council a plot plan showing the plots within the unit upon which it is proposed to build and the number of building units proposed to be erected on each plot. (2) The Council shall not approve a plot plan submitted to them under this clause unless the following conditions are complied with—(*a*) The curtilage of every building existing or commenced upon the land unit at the date of submission of the plot plan must be included in one or more of the plots; (*b*) The average number of building units shown on the plot plan as proposed to be erected per acre over the land unit must not exceed the average per acre permitted under the last preceding clause.

Erection of Buildings upon Land for which a Plot Plan has been Approved.—Where a plot plan for a land unit has been submitted to and approved by the Council under the last preceding clause—(1) No building shall be erected on any land within the land unit not included in a plot. (2) There shall not be erected upon any plot a greater number of building units than would give (together with the equivalent in building units of any buildings existing or commenced upon the plot at the date of submission of the plot plan) the number marked on the plot on the plot plan.

Character of Zones.—In giving their consent to the erection of a building the Council may impose such conditions as they think fit. In the case of any building proposed to be erected in zone which may be erected only with the consent of the Council, the Council, in giving or withholding their consent or imposing any conditions, shall have regard to the likelihood of the use for which the building is designed injuring the amenity of the zone, including, in the case of an industrial building, the likelihood of any injury due to the emission of smoke or fumes, or to dust, noise or smell, or other cause.

Supplementary Zoning.

Density and Character.—(1) If at any time the Council are of opinion that—(*a*) the buildings to be erected in any part of a character zone ought to be limited to one or more of the classes of buildings which are permitted under clause 28 to be erected in that zone; or (*b*) any class or classes of buildings which, under the provisions of clause 28 may only be erected in any zone with the consent of the Council can, consistently with the predominant use of the zone, be permitted to be erected in any part of the zone without such consent; or (*c*) the average number of building units permitted under clause 21 to be erected per acre ought to be varied over the whole or any part of density zones—the Council may make an order limiting the class or classes of buildings whose erection is permitted or giving a general consent to the erection of any class or classes of buildings in such part of the zone as aforesaid or varying the average number of building units permitted to be erected per acre in density zones , as the case may be, and may submit the order to the Minister for approval: provided that no order shall be made which would allow the average number of building units permitted to be erected per acre in zones to be increased to more than .

Height of Buildings. Limitation of Height of Buildings.—(1) (*a*) No building (not being an industrial building erected in character zones) shall be so erected or altered that:—(*a*) the highest point of the building, measured from the mean level of the ground immediately surrounding the building, exceeds feet in height; (*b*) any part of the building projects above any line drawn from the centre of the street in front of the building at an angle of ° (or if the street is of any one of the types described in the first Schedule to this scheme, °) with the horizontal: provided that—(i) For the purpose of the foregoing provisions account shall be taken of parapets but not of chimneys, ornamental towers, turrets or any other such architectural features; (ii) In the case of a building erected at the corner of two or more intersecting streets the height of the building shall be determined by reference to the wider or widest street; (iii) In the case of a place of assembly the Council may permit either or both of the limits imposed by this clause to be exceeded to such extent as they may think fit. (2) No dwelling-house erected in the zone edged on the map shall contain more than two storeys, exclusive of any storey constructed wholly or partly in the roof and exclusive of any storey the floor of which is more than 6 feet below the mean level of the centre of the street in front of the building: provided that, if in the case of a group of contiguous dwelling-houses not exceeding six in number it is desired to maintain the height of all the dwelling-houses forming the group at the same level, not more than four of the dwelling-houses may, where the slope of the street in front thereof renders it necessary, contain three storeys, exclusive of any storey constructed wholly or partly in the roof.

Space about Buildings.—Space within Curtilage of Buildings which may be covered by Buildings.—In the case of a building whose erection is commenced after the proportion of land within its curtilage which may be occupied by buildings shall not exceed the proportion indicated. In the case of a building whose erection in commenced before no alteration shall be made thereto such that the area of the ground covered by the building on that date would be increased by more than 20 per cent. if the proportion of land occupied by buildings within the curtilage of the building as altered would exceed the proportion indicated: provided that—(*a*) The Council may permit the proportion to be increased in the case of a building erected before , or where, owing to a building abutting on two or more streets, or by reason of any other exceptional circumstances, they think fit so to do; and (*b*) in the case of a dwelling-house which (i) is, in the opinion of the Council, adjacent to the junction of two or more streets, or (ii) is situated within the zone edged on the map, the proportion of land within the curtilage thereof which may be occupied by buildings, may exceed the proportion indicated in the Table, but shall not exceed ; (*c*) the provisions of this clause shall not preclude the erection of a building proposed to be erected by virtue of an exemption granted under clause 21 (2).

Breaks in Building.—(1) Not more than dwelling-houses or residential buildings shall be erected in one continuous block, and no detached dwelling-house or residential building or block of dwelling-houses or residential buildings shall be erected nearer to a building or block of any of those types than feet or nearer to any other building than feet. No building shall be erected nearer to the owner's boundary, or to a building or block of any of the aforesaid types, than feet.

Power to Permit Buildings in Advance of Building Line.—Notwithstanding the foregoing provisions of this clause, the Council may, if they think fit, permit—(*a*) the projection in front of the building line of any bay window, porch or other projecting portion of a building; (*b*) in the case of industrial buildings, the erection of the building at such distance, not being less than feet from the boundary of any street, as the Council may specify; (*c*) the erection of groups of shops and business premises at such distance, not being less than feet from the boundary of any street, as the Council may specify; (*d*) the erection in front of the building line of any building where, by reason of the levels of the site or of any adjoining land, or by reason of any other exceptional circumstances, or for purposes of architectural effect, such permission is, in the opinion of the Council, advisable; (*e*) the erection in front of the building line of a lodge or other building to be used in connection with a dwelling-house, provided that the lodge or building shall not exceed two storeys in height and shall not be nearer than ten feet to the boundary of the street.

General Convenience and Amenity.

Safety of Traffic.—(1) If at any time the Council are of opinion that, for the purpose of securing the safety of traffic, the height of close fences and walls, the growth of hedges, trees and shrubs, and the erection of other obstructions upon any land adjoining any street or the site of any proposed street ought to be regulated, the Council may prescribe a line upon the land, and shall thereupon give notice of the line prescribed to the owner and occupier of the land; provided that where a building line is shown on the map or has been fixed by the Council under this scheme in respect of the street or proposed street, any line prescribed under this clause shall be between that building line and the boundary of the street. (2) Where a line is prescribed by the Council under this clause, no wall, fence, hedge, tree or shrub or other obstruction (other than temporary structures erected in connection with building operations), shall be erected or be permitted to grow between that line and the boundary of the street or proposed street so as to cause danger to traffic by obscuring the view. (3) The

Council may, from time to time, vary any line so prescribed, and shall give notice of the variation to the owner and occupier of the land. (4) No proceedings in respect of any contravention of this clause shall be taken until fourteen days after notice has been given to the person in default.

Preservation of Trees.—(1) If at any time the Council, having regard to the amenity of any part of the area, are of opinion that any growing tree of a height of more than ft., or having a trunk of a girth of more than ft. at a height of ft. above the ground, or any group of such trees, ought to be preserved, the Council may register the tree or group of trees, and shall thereupon notify the owner and occupier of the land upon which the tree or group of trees is growing that the tree or group of trees has been registered, and the register of trees so made shall be open to inspection by persons interested at all reasonable times. (2) No person shall cut down or wilfully destroy any tree registered by the Council under this clause, except with the consent of the Council or upon an order of a Court of Summary Jurisdiction under subclause (3) of this clause, or where the tree has become dangerous: provided that if the Council do not notify their refusal to consent to the cutting down or destruction of any registered tree within one month from the date of an application for consent, their consent shall be deemed to have been given.

Advertisements.—(1) Subject as hereinafter provided no advertisement shall be displayed in such a position or manner as to injure the amenity of any part of the area. (2) (*a*) Any person may apply to the Council for their consent to the display of an advertisement, and consent shall be deemed to have been given if the Council do not notify their refusal to consent within one month from the date of the application. (*b*) Where, on any such application, the Council refuse their consent, the applicant may, within twenty-one days from the date of notification of refusal, appeal to a Court of Summary Jurisdiction, and the Court may, if they think just, make an order permitting the display of the advertisement to which the application relates, and may direct by whom and in what manner the costs of the appeal shall be paid.

Maintenance of Private Gardens.—If any private garden or private open space (as defined in Part IV. of this scheme) is in such a condition that it injures the amenity of the neighbourhood, the Council may serve a notice on the occupier, or, if there is no occupier, on the owner of the garden or open space, requiring him within a reasonable time to be specified in such notice to take such action as is necessary to secure the amenity, and in default of compliance with such notice the Council may themselves do anything required to be done for that purpose, and may recover the cost from the person or persons served with the notice or from any one or more of them.

Town-Planning Institute Conference.

The fifth annual country meeting of the Town-Planning Institute will be held at York from October 5 to 7. Members will travel down on Thursday evening, October 4.

The York Corporation has invited the Institute to hold its meetings at the Guildhall, and there will be a reception in the State Room at the Mansion House. The City Engineer will describe the town-planning proposals of the City of York, and the winning design of the Town-Planning Competition, held just prior to the war, will be on view. Messrs. Rowntree have invited the members to visit the Earswick Garden Village, and its plan and method will be explained. Mr. F. C. Mears (member) will read a paper entitled: "The Planning of Mediæval Cities," illustrated by lantern slides. The meeting is not confined to men or members of the Institute only; friends are invited.

THE ROYAL SANITARY INSTITUTE.

ANNUAL CONGRESS—1.

That the pleasure of a visit to Folkestone or Bournemouth in the summer was not responsible for the success which attended the annual congresses of the Royal Sanitary Institute in 1921 and 1922 is indicated by the record attendance at this year's congress, which was held at Hull last week. Though Hull does not claim to have the attractions of a popular South Coast holiday resort, its congested districts, its docks, and its industrial areas proved to be a source of great interest to those concerned with questions affecting the well-being and health of the population.

The congress was officially opened on Monday, July 30, by the President, the Right Hon. T. R. Ferens, P.C., High Steward of Hull, who expressed his appreciation of the selection of Hull as the meeting place of the thirty-fourth annual congress of the Institute, and extended a warm Yorkshire welcome to the members and delegates present. In the course of his address he deprecated the policy now being adopted by some towns of postponing improvement schemes on the ground of economy. In referring to Hull as a port, he mentioned that the imports of foodstuffs alone reached a total value of £60,000,000 in 1921, which figure was surpassed only by London and Liverpool. Dealing with the housing problem, he estimated that at the present time Hull required 6,000 more houses. "It is," he said, "no use attempting to instil the precepts of hygiene into people who live in the many dilapidated and insanitary dwellings which to-day exist in the slum areas of all our towns and cities, or into those who have to live crowded in lodging-houses in the most unsavoury parts of our towns. . . . I would go so far as to say that the amelioration of most of our national social and economic evils depends first upon the dissipation of the housing stress which now prevails."

The meetings of the various sections were held in the mornings, and the afternoons were devoted to visits to works and places of interest in the neighbourhood.

Although most of our readers will be more interested in the proceedings of the Section on Engineering and Architecture (reported on the next page), many useful and suggestive passages occurred in some of the papers read before the other sections.

The Slum Problem.

In the course of a paper entitled "Slum Areas: Their Treatment and Cure," read before the Section of Engineers and Surveyors, Mr. A. Horsburgh Campbell, M.Inst.C.E., City Engineer and Director of Housing of Edinburgh, put forward the suggestion that it would be a wise and prudent act of public policy if local authorities would proceed to acquire the whole of the slum property within their administrative areas, even although they were unable at once to demolish and to re-house the population on other sites. Not, of course, to hold *sine die*, but at once to ameliorate slumdom in its existing physical state of decay by the execution of temporary repairs, by cleansing, and by bettering its sanitary arrangement and equipment. That was advocated as a temporising work pending the time when the housing needs of the country were less straitened, and the building of new houses for the slum-dweller had become an accomplished fact. Till then he urged them not to remain passive and inactive, nor leave the slum-dweller to exist in his present state. Favoured by the tide of public sentiment on the question, they should go forward now with at least some real proof and evidence of immediate constructive effort to improve the housing conditions of those who were unable to help themselves, and whose domestic conditions cried out most for help. The alternative, he said, was to do nothing with slums until new houses could first be provided. But with the prevailing housing famine, the shortage of man-power and materials to build, and the immensity of the slum-problem of the nation, the re-housing of the poorest part of the community was a work which must take at least a generation to accomplish. Hence, then, the case and the plea for the initiation of an immediate constructive step which would temporarily ameliorate the conditions of the slum-dweller, and so carry him over that period that must elapse before the slums could be altogether wiped out and a new creation arise in their place.

The Manufacture of Portland Cement.

"Portland Cement: Its Manufacture and Uses," was the title of a paper by Mr. G. V. Maxted, M.Inst.C.E. In the course of a very complete description of the manufacture of Portland cement, he said the manufacture of that material had during the last few decades become a highly-specialised engineering and chemical industry, in which the best engineering and chemical knowledge was made use of in practically all the cement factories throughout the world. In recent years, since the advent of the rotary kiln and the British Standard Specification, together with the rapid advance of technical knowledge, the quality of Portland cement produced by most makers was not only thoroughly reliable, and of high tensile and compressive strength, but the knowledge of those engineers who used the material had advanced with equally rapid celerity, so that nowadays it was a most unusual thing to learn that the quality of the cement used had let down engineers employed in designing important public works and buildings in which it was so successfully used.

Economies in Swimming Bath Upkeep.

At the conclusion of a paper describing the installation of continuous filtration plant at three public swimming baths in Hull, Mr. T. Thomas, Deputy City Engineer, summarised his experience of the working of the plant as follows:—(1) Bath water during a period of six months' filtration has been shown by bacteriological examination to be maintained at a standard of purity which is equal to, or little below, the accepted standards for drinking water. (2) The standard of purity is higher than fresh water in the swimming bath after its use by 50 or 60 persons. (3) The water is clear, odourless, and tasteless to the bather, and no complaint has been received as to the condition of the water. (4) There is a very appreciable saving in water, coal, and attendance, and the total cost of a filtration plant, including the necessary buildings, can be paid off in 12 to 15 years from the savings effected. (5) The water is maintained at nearly the same standard of purity, and the baths are more regularly used by bathers who formerly only visited the baths on fresh-water days.

Domestic Labour-Saving.

The necessity for designing houses so that they will be economical of labour was emphasised by Miss S. M. Bushell, Honorary Secretary of the Women's Section of the Garden Cities and Town-Planning Association, in a paper on "Hygiene and the Labour-Saving House," in which the following points were put forward:—Houses should be built with surfaces which will not collect dust. The walls and floors should be smooth, with no roughnesses or cracks, so that when they are cleaned no dust will be left behind; besides this there should be no crevices or ledges, and mouldings should be of the plainest description. Corners should not be permitted. Where two surfaces join, such as two walls, the corner is not difficult to clean, but where three surfaces meet, such as two walls and the floor, it is impossible. Every room in the house should get the sunshine at some hour of the day. Windows should be of good size and reach to within a few inches of the ceiling in order that

the light may penetrate to the far side of the room. In kitchens and sculleries two lights, one over the sink and the other over the stove, will save eye-strain as well as labour. A bathroom is a real necessity, and a constant supply of hot water laid on to sink, bath, and washbasin is about the most labour-saving thing one can have. Each bathroom should have a washbasin. A boiler for the weekly wash should always be provided in small houses. The problems of hot water supply and of rubbish burning can both be settled by installing a small independent boiler; it is the cheapest and most efficient method of heating water, and has the additional advantage of daily burning the rubbish without betraying the fact with a smell. The larder is a most important part of the house, both from the health and from the labour-saving standpoint; it is essential that it be ventilated and fly-proof; a cool aspect, preferably north, is needed, and it is important that it be easily accessible. In addition to the larder there should be a store for spare crockery, jam, &c., and there should also be a place for the pram.

The Supply of Small Houses.

Speaking before the Sanitary Inspectors' Section, on "Difficulties and Problems Confronting Sanitary Inspectors and Property Owners," Alderman M. Cheverton-Brown (Secretary of the National Federation of Property Owners and Ratepayers) said to-day, by reason of the adverse legislation of the past twelve or fifteen years, small houses had ceased to be produced and there were for this type of property more sellers than buyers. Until that state of things was changed, until all restrictions were removed and freedom of contract became once more operative, small houses would not again be regarded favourably as an investment, and consequently they would not be produced. Production by the State or by municipalities on uneconomic lines had already hung a millstone of expense and obligations round the neck of the taxpayer and ratepayer, which further schemes on similar lines could and would but increase and perpetuate. Subsidies in any form would never, in his opinion, produce the 80,000 houses needed every year in this country to meet normal requirements at economic rents, to say nothing of the shortage of half a million houses or so already existing. The remedy, and the only remedy in the opinion of those who really understood the question, was the removal of restrictions, the restoration of confidence amongst investors, and the encouragement of private enterprise.

ENGINEERING AND ARCHITECTURE SECTION.

Presidential Address.

In his Presidential Address to the Section of Engineering and Architecture, Alderman W. C. Fenton, F.R.I.B.A., J.P. (Lord Mayor of Sheffield), said the past ten years had seen a remarkable advance in engineering as applied to sanitary matters. Architecture and engineering went hand-in-hand to a very large extent. One method of construction in which he had taken great interest was the ferro-concrete construction of buildings, which he had found most useful for ordinary buildings as well as for engineering structures. He had had the opportunity of using it for quite large buildings—combined with brick and stone for ornamentation—and he had shortly to put in hand a large block of offices and warehouses constructed entirely of ferro-concrete. There was no doubt whether fine or refined mouldings could easily be worked in this method, but bold striking mouldings and general decorative effect could be well accomplished in this method of construction. It was eminently a sanitary form of building. There were no hollow spaces for vermin, and it was far more weather-proof than ordinary brick or stone walling. He felt certain that that form of construction had great possibilities before it, and that its use would become more general.

Referring to building by-laws, he said it was satisfactory to note that the Ministry of Health was requiring old and obsolete building by-laws to be amended to provide for more modern modes of construction, and particularly to enable houses to be built at a less cost. There had, in the past, been too much stress laid on the fire insurance point of view in those by-laws, and, in his opinion, the insurance companies were well able to look after themselves. Of course, public authorities must take, or insist upon, all reasonable precautions to prevent fire, but having done that anything more became a deterrent to building and was a curse rather than a blessing. He had had experience of an entirely wooden-built village erected by a large corporation for the men engaged upon the construction of waterworks, and that had been built 10 years without a single fire. But if it had been proposed to erect it in any ordinary town, or under ordinary by-laws, it would not have been allowed. It was another proof that even wooden buildings could be used with safety, and incidentally last a number of years. Those houses would pay for themselves long before their life was exhausted, and were not only comfortable in their appointments but had been highly praised by all who had visited them as well as by the occupiers. The general shortage of houses had provided architects with splendid opportunities of showing their skill in designing houses for the working classes as well as for those of slightly more ample means, and he thought they had justified their profession in a remarkable manner.

The first two papers, namely, "Reinforced Concrete in Municipal Engineering Works," by Mr. G. W. Palethorpe, A.M.Inst.C.E., and "Some Modern Materials and Methods of Construction for Use in Buildings," by Mr. H. D. Searles-Wood, F.R.I.B.A., were taken as read, and discussed together.

CONCRETE IN MUNICIPAL WORKS.

In his paper, Mr. Palethorpe pointed out that during the last few years reinforced concrete had made rapid strides, and had undoubtedly been the means of effecting great saving in initial outlay and annual maintenance, with a considerable reduction of risk of destruction by fire. From quite an early date reinforced concrete had been much used in municipal work, and there was probably no branch of engineering that had employed it to better advantage. There were very few works in which the construction did not commend itself very favourably, and the advantages of reinforced concrete would be admitted by all in the construction of foundations, bridges, reservoirs, retaining walls, and various other works.

Some of the advantages of the use of reinforced concrete were as follows:—

(1) The bulk of the work was carried out by unskilled or semi-skilled labour; the only tradesmen required were the joiners for the formwork and blacksmiths for bending the steel, but with the aid of bending machines the rods could be bent cold and the smith's work brought to a minimum.

(2) Reinforced concrete increased very much in strength with age, and might be considered practically indestructible. No painting or maintenance was required as in the case of steel and wood, and it was quite easy to repair any part of a structure which might accidentally become damaged.

(3) A building of reinforced concrete was practically fireproof. In most cases a cover of one inch of concrete was sufficient to protect the steel from fire, though an aggregate that would splinter with heat, such as limestone, should be avoided. Experiment and actual experience showed that the smaller the aggregate the less the injury.

(4) Structures in reinforced concrete, being monolithic, offered great resistance to vibration, which made them invaluable in the case of engine houses, mills and factories.

(5) A great advantage in favour of reinforced concrete from the point of view of the designer, was that owing to the monolithic construction most of the beams and slabs might be considered as being either fixed or partially fixed, with a considerable reduction of the bending moments.

(6) In construction reinforced concrete allowed more adaptability than any other material. It not infrequently happened that owing to a soft place in the ground foundations had to be altered, or owing to unforeseeen circumstances the spacing of columns, &c., had to be amended. Everyone with experience of steel construction knew the delay caused by any alteration, whereas reinforced concrete was comparatively easy to alter, but in all cases the designer must be consulted before any deviation from the plans were made.

(7) In most cases reinforced concrete would compare favourably in cost with average brick or steel construction, and where local conditions were advantageous the saving in first cost might be as much as 30 per cent.

(8) The material had great possibilities for architectural treatment, though successful instances were still rare.

(9) A very great advantage at the present time from a municipal point of view was that the work could be used for unemployment relief works, and grants could be obtained from the Government for that purpose. Many bridges had been constructed recently by the aid of grants that would probably have had to wait for ten years or more, and with the great increase of motor traffic in recent years, and the very weak condition of many highway bridges all over the country, a great saving had been effected for the ratepayers. There was no other material which could be used for building purposes that could be carried out by unemployed labour.

There were a few disadvantages in the use of reinforced concrete, but for certain structures, if both sides were carefully weighed up, the advantages completely outweighed the disadvantages.

Municipal Concrete Buildings in Hull.

To instance the various uses that reinforced concrete can be put to, he gave a few details of works that had been constructed by the Hull Corporation.

Bridges.—There were at present 12 bridges of spans up to 40 ft., either erected or in course of erection; they were of arch, or beam and slab, construction. The bridge in Cleveland-street over the Fordyke Stream, built in 1902, was the first reinforced concrete highway bridge constructed in this country.

Sewage Pumping Stations.—Owing to the extreme flatness of the district, the drainage of the outlying parts of the city had to be pumped to the high level sewers by means of sub-stations. There were five of these stations, all built of reinforced concrete. The pump chambers were 8 ft. 6 in. sq. by 20 ft. deep, with reinforced concrete walls 10 in. thick.

Stores for Tramway Department.—Built in 1912 this building consisted of reinforced concrete framework, floors, and roof trusses. The walls were of 9 in. brickwork throughout, each floor carrying its own wall. That was a good instance of the economy of reinforced concrete, as if the walls had been of ordinary brick construction the thickness at the base would have been 27 in.

Workshop and Garage.—This building, built in 1921, was 52 ft. by 38 ft., and consisted of reinforced concrete framework with 2 in. panelled walls, reinforced with steel lathing.

Electricity Sub-station.—This structure, at St. Andrew's Dock, was built in 1912, and was 30 ft. by 20 ft., and consisted of reinforced concrete framework with 4 in. walls.

Sewer Syphons.—There were four inverted syphons carrying sewage under large agricultural drains, at present in course of construction; they were of 36 in. diameter reinforced concrete tubes of Stanton-Hume manufacture, each 4 ft. long, surrounded by concrete. Previous syphons had been of cast iron. The price of the concrete tubes was 50s. 3d. per yd., and the approximate price of cast iron pipes was 99s. per yd. It was anticipated that there would be a considerable saving in cost of laying owing to the more easy handling of the short pipes.

Concrete Sewers.—The Corporation had constructed several concrete sewers, 5 ft. by 3 ft. 4 in. elliptical, and 4 ft. by 2 ft. 8 in. and 3 ft. 6 in. by 2 ft. 4 in. egg-shaped, the sides being from 7 in. to 9 in. thick, according to their position. Several of those sewers had been made recently as unemployment relief works. The-

price of a 3 ft. 6 in. by 2 ft. 4 in. sewer 10 ft. deep, carried out by that labour, cost £4 10s. per yd. complete. Briefly, the construction was as follows :—When the excavation was completed, 6 in. of concrete was put in the bottom, and on this pre-cast concrete invert blocks were laid to correct falls. The wood formwork was made in two portions, each 6 ft. long, the lower part being collapsible to facilitate removal; 6 bottoms and 12 tops were used on each job. The bottom formwork was placed on the blocks and strutted off the sides of the trench, and concrete placed around and well rammed. The top centres were supported from the invert blocks and the concreting completed. The bottoms could be stripped after 24 hours, whereas the tops required at least two days. The concrete was usually 8 to 1, and the aggregate a mixture of sand and shingle.

Electricity Works.—In 1915 a new turbine house, 65 ft. by 105 ft., and a boiler house, 95 ft. by 94 ft., with overhead coal bunkers having a capacity of 2,000 tons, were built of reinforced concrete, the walls being 6 in. thick. In 1922 a further turbine house, 83 ft. by 67 ft., of similar construction, was built for a 10,000 K.W. set.

Swimming Baths.—In 1909 and 1912 swimming baths were erected at Madeley-street, the men's bath being 35 ft. by 90 ft., and the boys' bath 30 ft. by 84 ft. The tanks and galleries were of reinforced concrete faced with mosaic.

There were also a cattle and pig market, workshops for Tramway Department, blacksmith's shop, basement for filtration plant for swimming baths, and floor for open-air swimming baths, where reinforced concrete had been largely used.

After the war, owing to the high prices and the great difficulty of obtaining fireclay street gullies, the Corporation commenced making them of reinforced concrete. They were 14 in. by 14 in. by 2 ft. 7½ in. inside measurements, and the cost worked out at 25s. each, whereas a quotation for fireclay gullies was 56s. each. The output was two to three per day, which, of course, could be increased if desired by making more form boxes.

The Corporation also made fence posts, gate posts, landings for manholes, and landings for vaults in reinforced concrete, and curbing and channelling in ordinary concrete,

Hints on Concrete Construction.

In the course of some notes on the construction of reinforced concrete, he said the first consideration was to have a good, live foreman or clerk of works, who would conscientiously perform his duties and see that all the details of the work were carried out.

All steel should have an ultimate tensile strength of 28 to 33 tons per sq. in., and comply with the British Standard Specification for structural steel for bridges. Steel should not be oiled, tarred, or painted, but all loose scale or rust must be removed before the reinforcement was placed in position.

The most important and, generally speaking, the most difficult work in connection with the erection of reinforced concrete structures was the accurate placing of the steel, which must be fixed in exactly the position shown on the plans. Foremen or clerks of works must check all rods before any concrete was placed.

A difficulty generally met with was to support beam rods in such a manner that the cover at the bottom would be as shown on the plans. That was often done by packing up the steel from the shielding by means of blocks of wood of the requisite thickness, and withdrawing them as the concrete was placed. After the formwork had been stripped it was frequently found that packings had been left in by accident, which had to be cut out and the concrete patched up again. A very neat method of supporting rods from the bottom of the shielding was to use small pre-cast cubes of concrete, which could remain in the work without any disadvantage.

If pre-cast beams were to be used, the top side must be distinctly marked to avoid the risk of putting in beams upside down. Formwork must be substantially and accurately constructed, well fixed, and supported to take the weights it was required to carry. Long beams should be framed with a camber of about 1-350 span. Column boxes should be built up on three sides, and the fourth side should be gradually built up as the concrete was placed.

All formwork for beams should be held in position by means of wedges so that any movement could be taken up, and on completion the shielding could be removed without risk of jarring the concrete. The sides of beam boxes should be secured to the bottom in such a manner that they could be stripped without disturbing the bottom timber, and so allow the air to get to the concrete to assist the hardening before the beam was finally stripped. It should be remembered that the formwork was the most expensive part of the work and must be used over and over again.

Immediately before placing the concrete, the formwork should be carefully cleaned out, trued up, and coated with soft soap, form oil, whitewash, or some other suitable preparation to facilitate removal.

The aggregate might be of almost any hard, clean material, such as granite, shingle, stone, gravel, or broken brick, but for reinforced concrete work granite or shingle were the best. Concrete should always be proportioned so that the sand and cement were respectively in excess of the voids in the aggregate and sand. The percentage of voids in the aggregate was usually about 40 to 50, in sand about 35; 4–2–1 concrete would generally give the best mixture.

The aggregate should vary in size from ¼ to ¾ in., and the sand up to ¼ in., and 75 per cent. of the sand should pass through ⅛ in. square mesh.

The amount of water to be used in the mixing was a matter of great importance: the mixture should neither be too dry nor too wet, but should quake slightly when rammed. It was better to err on the side of a slight excess of water than to use a concrete which was too dry. The wet mixture would only yield about two-thirds of the combined volumes of the dry materials, as the sand and cement went to fill up the voids in the aggregate.

The cement should be slow setting, and comply with the specification of the British Engineering Standards Committee, and each new batch should be tested before use.

Concrete must be well mixed, and, if possible, a mixing machine used. It should be laid quickly in small quantities, and well rammed round all the rods and thoroughly consolidated.

Each section of concreting should, as far as possible, be done in one operation. When work was resumed upon any concrete that had set the face should be roughened, washed clean, and covered with a layer of cement mortar. The new concrete should then be rammed against the old, as hard as possible without injuring it.

Care must be taken to avoid disturbing the set of concrete until sufficient time had elapsed for the setting to take place; no load, such as walking over it or laying planks upon it, should be allowed.

The reinforcement rods must not be moved in ramming, and steel must not be fixed in the vicinity of new concrete where vibration of the steel might destroy the set of the concrete. Concrete must be kept moist and covered in hot weather, and protected against frost.

No hard and fast rule could be made for the time to be allowed before stripping the formwork, all depending upon the weather and the size of the work, but the period should be approximately 14 to 28 days. The time must be left to the judgment of the person in charge.

In many reinforced concrete works it was necessary that the walls should be waterproof. There were a few waterproofing compounds at present on the market that admirably served their purpose, but it had been shown by experiments carried out in America and in this country that many would cause a loss of strength. There was no doubt that carefully graded concrete with sufficient cement to fill the voids with an excess of 5 per cent. would give a perfectly impervious concrete under moderate heads.

[The discussion on this paper, together with Mr. Searles-Wood's paper, will be given next week.—Ed.]

HEALTH EXHIBITION.

The practical side of the Congress was enhanced in interest by a Health Exhibition at Wenlock Barracks, Anlaby-road, in which many of the appliances and methods discussed at the meetings were exhibited and demonstrated.

Some excellent examples of modern paint work were shown by the Keystone Varnish Co., Ltd., of 14, Scott-street, Hull; Plaster Paint, Ltd., of 17, Percy-street, London, W.C. 1; and Messrs. Blundell, Spence & Co., Ltd., of Beverley-road, Hull. A representative selection of "Rawlplugs" was exhibited by Messrs. Rawlplugs, Ltd., Cromwell-road, London, S.W.7, and the ease with which they can be fixed to hard walls and ceilings was demonstrated.

The Dominion Machinery Co., Ltd., of Halifax, showed in operation one of their latest type ball-bearing "Elliot" woodworking machines, for ripping, cross-cutting, boring, trenching, mitreing, tenoning, surfacing, &c.; this stand also exhibited the "Dominion" ball-bearing spindle moulder and the "Dominion" scroll saw and moulder.

The "Lewbart" automatic disinfector and deodoriser was shown on the stand of the Lewbart Manufacturing Co., Ltd., of 2 and 3, Norfolk-street, Strand, W.C. 2; this is a small instrument, 3½ in. diameter, 8 in. long, clipped on the flush pipe of the lavatory, without severing the pipe or using solder, making a water-tight joint by the means of a small rubber pad. A small square hole (⅝ in. square) is made in the pipe to allow the trigger to be inserted and a small hole (⅛ in. diameter) to take the discharge of the disinfectant. The action is automatic and fool-proof. The disinfectant enters the pan only after the flush has taken place. The mixture is not further diluted with the water in the pan, but merely floats on the top, and, therefore, forms a protective barrier. The containers hold sufficient disinfectant for 1,400 pulls of the chain.

Messrs. Sidney Flavel & Co., Ltd., of Leamington, exhibited an extensive range of their well-known heating and cooking apparatus for coal and gas; the gas cookers manufactured by this firm are all fitted with "Flavel" burners, which effect a considerable economy in gas consumption.

An interesting new invention was shown by Mr. A. B. Burleigh, of 69, The Mount, York, in the form of a double socket rest bend for the outgoing pipe from a water closet where the permanence and stability of interior joints is essential. In these days of high vibration from heavy motor traffic the importance of a safe conduit for sewage from the interior of a house to the exterior cannot be too strongly emphasised, and it is claimed that this rest bend is better than an ordinary bend (with its joint in the wall) surrounded and bedded in concrete. The wall is first built, and a cavity left, covered by a cement flag, so that no weight is transmitted on to the bend itself, but comes upon the solid lugs at either side; then, as soon as any slight settlement has taken place, the spigot pipe is brought forward to 2 in. within the outer face. The bend is then passed from the inside to the outside, the drain jointed up, and collared with cement on the outside of the wall. A 2-in. fall is allowed, and if the conditions are bad both ends of the spigot are Stanford jointed; this, however, is not necessary in the ordinary way.

The awards of the jury appointed by the Royal Sanitary Institute included the following:

Silver Medals.—Blundell, Spence & Co., Ltd., Hull: Paints, varnishes, and dry colours. Dominion Machinery Co., Ltd., Halifax: "Elliot" woodworker. Sidney Flavel & Co. Ltd., Leamington: "Leamington" 1923 gas cooker.

Bronze Medals.—The Keystone Varnish Co., Ltd., Hull: "Keystona." Meldrums, Ltd. Timperley, Manchester: "Meldrums" steel cased refuse destructors for hospital use, and "Sack" type portable steam disinfector. The Rawlplug Co., Ltd., London, S.W. 7: Recess screws and outfits, and "Rawlplug" aluminium fittings and bathroom sets.

THE BUILDING TRADE.

ESTIMATING FOR SMALL BUILDERS—IV.

By J. H. BARNS, F.I.O.B.

One of the difficulties in dealing with the cost of manufacture of joinery is the great range of qualities of material and differing standards of labour or degrees of excellence in finish. It is possible to purchase a deal door of average size for 15s., whilst a similar deal door, but of superior quality wood and workmanship, would cost 45s. or over. In both cases all you have is a door. If your customer will be satisfied with the 15s. article, it is useless to quote in keen competition work for a door costing 45s. In round figures, 15s. per door would equal 5s. per ft. cube labour and materials for the finished article, equal to about the cost of materials only for third quality deal of some good brand. In other words, the small builder can buy cheap ready-made joinery at lower prices than he can purchase good materials only.

Exactly the same can be said of a number of articles used in houses. The small builder is not always able to avail himself of the low prices for ready-made joinery, as sometimes the article required has to be made to some special or awkward size which cannot be obtained from stock. He must then either start his general utility carpenter upon the job or arrange for its manufacture by some firm of joinery specialists who cannot carry out small orders for special work at keen cut rates.

With regard to the degrees of excellence in finish, what often happens is that consciously or unconsciously a builder sets up for himself a standard and endeavours to produce either the 15s. or the 45s. door before mentioned, or some grade in between, and the temptation when competition is unduly severe is to reduce the amount of labour expended on the door and instead of supplying the 45s. one he may have wished to provide, he produces an article at 35s.

The methods of manufacture of joinery have so completely changed with the introduction of machinery that many old "Constants of Labour" relating to building work in general and joinery in particular, do not apply. Many of them were based on hand sawing of timber, when top sawyers were a reality, and not mainly a figure of speech. When planing and glass papering had to be done by hand, it was dispensed with where not actually required. New men and new methods are to-day producing an article very similar in appearance to those supplied a hundred years ago. Then why not standardise sizes of ordinary joinery to reduce costs? This would be an interesting conundrum.

As can be seen from the tabular list of prices of deal given in the previous article, the cost of wood 9 in. wide is much greater than that 8 in. wide, it is therefore cheaper to use the latter size where possible. Say use 8 in. rails for doors in lieu of 9 in. Ready-made joinery is usually produced from batten sizes. For window boards, shelves, jamb linings, &c., batten sizes can often be used even when of sufficient width to need joining up.

Example :—

— Squares sup. 1 in. wrought yellow batten flooring, laid with splayed heading joints and cleaning off at completion.

1 square 1″ imported flooring ..	£1	10	0
Waste, say 10 per cent.		3	0
Nails, 5 lbs.		1	8
Labour		6	6
	£2	1	2
Add 15 per cent. profit and on-costs..		6	3
	£2	7	5

The cost of flooring boards will depend upon the quality and width of the wood. The prices are given per square of 100 ft. super. Before the war the number of feet per square varied with the width of the flooring, which is now altered, and all sizes are sold per 100 ft. super.

The following will give some idea of the variation in price of flooring :—

	Per Square. 1″×7″	1″×6″	1″×5½″	1″×5″
1st quality of some good brand ..	29/–	28/–	26/6	26/–
2nd do. do.	27/–	26/–	25/–	24/6
3rd do. do.	25/6	24/6	24/6	23/6

The item of 10 per cent. included for waste is the approximate loss consequent upon planing and cutting to lengths.

Before the war the piecework price for laying 1 in. flooring varied from 1s. 9d. to 12s. 6d. per square. Laying flooring is rather an uncomfortable job and the cost of cleaning off (by planing) the joints varies considerably.

Example :—

— Squares sup. 1 in. wrought yellow batten tongued and grooved flooring laid with splayed heading joints and cleaning off at completion.

1 square 1″ imported T. & G. flooring	£1	10	0
Waste, say 15 per cent.		4	6
Nails		1	8
Labour		7	6
	£2	3	8
Add 15 per cent. profit and on-costs		6	7
Cost per square	£2	10	3

The item for waste includes an amount for loss in measurement due to tonguing and grooving the boards.

The cost of tongued and grooved flooring boards is about the same as square edge flooring.

Yellow Deal Tongued, Grooved and Beaded Matching.

Quality.	Per Square. 1″×7″	1″×6″	1″×5″
1st quality of some good mark ..	30/–	28/6	27/6
2nd quality do.	28/–	27/–	26/–
3rd quality do.	26/–	26/–	25/–

	¾″×7″	¾″×6″	¾″×5″
1st quality of some good mark ..	24/–	22/–	20/–
2nd quality do.	22/–	20/6	18/6

	⅝″×7″	⅝″×6″	⅝″×5″
1st quality as before..	17/6	17/3	17/–
2nd quality do.	16/3	16/–	15/9

	½″×7″	½″×6″	½″×5″
1st quality as before..	15/–	14/9	14/9
2nd quality do.	14/–	14/–	14/–

The above prices are for goods in docks to which must be added cost of delivery, probably 1s. per square.

T. G. and V. jointed matching is usually the same price as T. G. and B. White matching is usually cheaper than yellow.

Example :—

— Squares ¾ in. yellow tongued, grooved and beaded matching in batten widths and fixing to studding.

1 square matching, say	£1	5	0
Waste, 15 per cent.		3	9
Nails		1	0
Labour, say		5	6
	£1	15	3
Add profit and on-costs, 15 per cent.		5	3
Cost per square	£2	0	6

It is not advisable to use matchboarding of less than ¾ in. nominal thickness, as after about 3-16 in. is allowed for planing and preparation the board is too thin to handle without damaging the tongues, &c.

The remarks in Part III relating to price and quality of deals and planed boards, also apply to rates just quoted for planed goods.

Example :—

— Ft. run 7 in. by 1 in. moulded skirting and grounds.

1 ft. run 7″ × 1″ imported moulded skirting			5d.
1′ 3″—2″ × ⅝″ deal ground			1d.
Labour, nails, &c.			4½d.
			10½d.
Add profit and on-costs			1½d.
			1s. 0d.

The length of "ground" given should be sufficient for the horizontal ground and "soldier." If a good job is required, the skirting must be carefully glass-papered or otherwise smoothed over, which would add considerably to the cost. Mitres are usually priced at some proportion of the cost per ft. of skirting. For an elaborate kind it may be worth as much as a foot run of skirting, and for a plainer type less, say quarter or half of a foot run.

Example :—

— Ft. super. 2 in. deal square framed doors.

As an illustration of the method of analysing cost of a 3 ft. by 7 ft. door will be taken. Space prevents the material being set out in detail. It would need :—

	£	s.	d.
13 ft. sup. 2″ deal, at 6/– ft. cub. ..		13	0
11 ft. sup. ⅞″ panels, at 4d. ft. sup. ..		3	8
Waste, 10 per cent.		1	8
Glue, glasspaper			3
Labour (21 ft. at 1/6)	1	11	6
	£2	10	1
Add profit and on-costs		7	6
Total cost of door	£2	17	7

Cost per ft. super, say 2s. 9d.

For further considerations of cost, see remarks above.

It is worth about 15 per cent. of labour cost for taking size and setting out a door. If there are many doors of the same size and description the cost of setting out can be spread over the whole quantity, otherwise it should be specially allowed for in the cost. It is hardly possible to analyse cost of labour involved in manufacture of door as the method of production and the amount of machine work may vary with each firm. If the door has to be prepared to receive a mortice lock it is cheaper to do this during manufacture. A hole can be bored near the end of the middle rail so that the end grain of the wood can be easily mortised. (See Fig. 1.)

The labour of hanging door is included in cost of door and not added to the cost of fixing hinges which are usually billed in the "ironmonger." Prices for other kinds of doors can be prepared

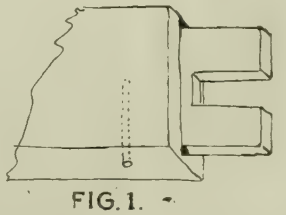


FIG. 1.

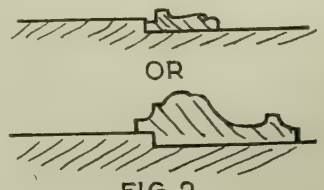

FIG. 2.

on similar lines. It would be worth about 2d. per ft. super per side additional if the door were moulded or bead butt. It is impossible to generalise on the subject as the kind and size of mouldings differ and panels may be of a greater thickness.

A bolection moulded door is one on which the panel moulding projects in advance of the framing, and may be of two kinds. (See Fig. 2.)

Price will depend on the size and description of moulding. Where joinery is required to finish the specified sizes about ⅛ in. should be added for each wrot face. Therefore a door specified to finish 2 in. must come out of at least 2¼ in. deal, and as this size is not imported a larger size must be used and the allowance for waste consequently increased.

Example :—

— Ft. run 4 in. by 3 in. wrot deal rebated and beaded door frame.

This to-day is worth about 15s. per ft. cube, and this by the inch by inch method before mentioned would equal 1s. 3d. ft. run. Labour cost will depend upon whether the frame is prepared in a machine working all four sides at once or by some more costly and more exact method. Other sizes can be worked out on the same basis.

Example :—

— Ft. run 3 in. by 1 in. deal moulded architrave.

1 ft. run imported moulding	1½d.
Waste 5 per cent., and nails .. say	¼d.
Labour	4d.
	5¾d.
Add profit and on-costs	¾d.
	6½d.

Limitations of space will prevent giving examples of prices of different kinds of mouldings. In a large bill of quantities a few dozen sizes of moulding may be stated. The easiest way of pricing them is to rate them out on the basis of some price per ft. cube. The small sizes will cost more than the larger ones. Some method as follows can be used :—

Mouldings up to 3″ square end section per ft. cub.	24/–
Mouldings up to 6″ square end section per ft. cub.	20/–
Mouldings up to 9″ square end section per ft cub...	18/–

	s.	d.
Thus 3″×1″ moulding would cost ..		6
„ 6″×1″ „ „ „ ..		10
„ 9″×1″ „ „ „ ..	1	1½

Mitres as for skirting.

A builder in a small way of business cannot be expected to be sufficiently in touch with prices to be able to go into the small differences which would be necessary in pricing a large bill. In small jobs the cost of labour is very uncertain, as time may have to be added going to and from the job in addition to ordinary costs. As a further instance, the cost of transport for one door if delivered separately is much more than one-twelfth the cost of transporting twelve doors. The cost of the general operations of a small job is about the same as those of works of twice the magnitude. Therefore, meticulous differences in rates are absurd. The best way is to adopt or arrive at some simple method for fixing covering rates for unimportant jobs. For larger works the matter should be more carefully gone into.

From the consideration of a large number of joinery prices it will be seen that the work would fall naturally into three or four categories. The *first*, flooring, matchings, &c.; *second*, mouldings; *third*, doors and frames; *fourth*, windows; and it would be possible to arrive at some general figure for each of these items so as to be able to remember the price, and when the time comes for pricing the estimate this figure could be used with a small addition for any divergence from the hypothetical standard taken.

NOTES ON CONCRETE.

THE EXPANSION AND CONTRACTION OF CONCRETE.

The cracking that sometimes occurs on concrete or cement plaster surfaces and in pipe-joints is due to shrinkage, although it is frequently attributed erroneously to expansion of the cement. In order to make a workable paste, either of neat cement or cement mortar or cement concrete, it is necessary to add more water than can be taken up by the cement during setting, and consequently when the mortar or concrete becomes dry some or all of the excess water which was essential for making a paste has been lost by evaporation. In common with many other materials this drying out and loss of water from concrete are accompanied by contraction, and when the material has not developed a great strength and is not free to move as a whole, the contraction leads to cracking.

Consider the case of the wearing surface of a concrete floor consisting of, say, two and a half parts of granite chippings to one part of cement, which has been laid on a foundation of leaner concrete, probably a mixture of one part cement, two parts sand, and four parts broken stone. The upper surface, being rich in cement, will require more water for mixing than the lower layer, and will consequently lose more water on drying out. Moreover, the upper surface, being exposed to the air, will dry out more rapidly than the protected lower surface. The net result is that the upper layer will shrink more than the lower layer of concrete, and as the two layers under proper conditions will adhere, the upper layer becomes stretched. If the shrinkage takes place within a day or two of laying the concrete it is probable that cracks will occur on the surface.

Means of prevention are: (1) to use no more water in the concrete than is necessary, so that the loss of water on drying and consequent contraction are reduced to a minimum; (2) to protect the concrete surface from rapid drying by keeping it damp for at least fourteen days, so that the shrinkage does not take place until the concrete is strong enough to resist the tendency to crack.

The causes of cracking and the means of prevention are similar in the case of cement plastering, except that in this case there is the additional danger of the brickwork (or other material to which the plaster is applied) being porous, and unless this porosity is corrected by thorough and complete soaking with water, some of the water in the plaster will be absorbed by the brickwork, and the tendency to crack will be greater.

In the case of pipe jointing, if neat cement be used the risk of cracking through contraction is considerable, because of the greater proportion of water that disappears when neat cement is used. But when care is taken to prevent too rapid drying, neat cement can be used for pipe jointing with perfect success. There is, however, no need to use neat cement for this work, because a mixture of one part of cement to one part of clean, fine sand will make a watertight joint at less expense and with less tendency to crack, because the contraction will be less than with neat cement. The covering of each joint during setting is, however, always desirable.

If the ends of the pipes to be jointed are not perfectly glazed they will probably be porous, and should be soaked with water before jointing is done. Referring to the mistaken idea, sometimes expressed when a range of pipes fails under the pressure test, that the cause is the unsoundness or expansion of the cement, it should hardly need pointing out that an expansive cement would burst the collars of the pipes, whereas what happens in 99 out of 100 pipe-joint failures is the leakage of water through cracks in the cement jointing.

In concrete work, where a porous aggregate such as broken brick is used, it is important to soak this thoroughly with water, otherwise contraction cracks are liable to occur, because water is absorbed from the setting cement by the porous aggregate.

The measure of contraction that occurs after cement has set has been accurately investigated, and when a bar of neat cement is kept in the dry atmosphere of a warm room it may contract up to about 0.2 per cent. in length, such contraction usually occurring in the first week and not increasing thereafter. A bar made of mortar or concrete will contract under the same conditions up to about 0.06 per cent., or at the rate of ¾ in. in a length of 100 ft. It will be obvious that a span of 100 ft. of concrete cannot contract three-quarters of an inch without cracking, and this is why concrete roads are laid with joints at intervals. By this device the unsightly, irregular cracks that would occur in a large concrete surface are prevented, and in their place are straight and regularly spaced joints.

On the other hand, if a concrete is kept damp immediately after setting, or if a dried concrete of any age is wetted, there is a slight expansion, amounting to about 0.01 per cent., or ⅛ in. in 100 ft.

It is possible for concrete and mortar to expand to a considerable degree, but only under two conditions, viz., when an unsound cement is used, or when an unsuitable aggregate is used. Unsound cements of British manufacture are rare nowadays, and the risk from this condition is remote, especially where a guarantee of compliance with the British Standard Specification is obtained. The unsuitable concrete aggregates that may give rise to expansion are those containing unburnt or partly consumed coal, a high proportion of sulphur in a certain chemical state and a high proportion of lime. A concrete floor made with an aggregate, such as boiler ashes containing coal, can expand to such an extent as to force out the walls between which the floor is laid, and there have been many examples of this occurring. The precise reason why coal should behave in this manner has not yet been satisfactorily explained, and it is particularly unfortunate that a cheap material like boiler ashes should be practically useless as a concrete aggregate on this account. An aggregate with a high proportion of sulphur is occasionally met with in the form of broken bricks where the bricks have been made from clay containing pyrites.

OBITUARY.

Sir Henry Holloway.

We regret to announce that Sir Henry Holloway, J.P., governing director of the well-known firm of builders and contractors, Holloway Bros. (London), Ltd., died at his London house, Draxmont, Wimbledon Hill, on Monday.

Born on August 5, 1857, the fourth son of the late Thomas Holloway, of Lavington, he founded the business which bears the family name in conjunction with his brother, the late Thomas Holloway, J.P., in 1882. Sir Henry Holloway—he was knighted in 1917—was also a member of the boards of several other prominent companies, and was a past President of the Institute of Builders and of the London Master Builders' Association.

Housing Subsidy.

A subsidy of £100 per house is being granted by Rhondda Council to encourage building by private local enterprise, on condition that it will be applied to reduce cost of the house, to enable it to be sold or let economically.

The Lyceum Theatre.

Messrs. Hooper & Hooper are cleaning and redecorating the auditorium of the Lyceum Theatre. The suspended and other scaffolding has been erected by Messrs. Palmer's Travelling Cradle & Scaffolding Co., Ltd., and the paint used is Messrs. Berger's "Matone."

BUILDING EDUCATION

A CORRESPONDENT writes :—

It is a regrettable fact that organisation in the building trades, so far as it applies to the instruction and training of lads and apprentices, has not been developed to the extent that it has in some other industries, notably, that of engineering. Whatever may have been the underlying reasons for this state of affairs, the industry as a whole is awaking to the fact that if our future builders are to carry out their work with efficiency and economy, and to uphold the worthy traditions of the past, more attention will have to be given to thorough courses of technical instruction.

For various reasons it is becoming increasingly difficult to obtain such instruction in the workshop, and technical institutions throughout the country are having to deal with the problem to an increasing degree. In order to further this work over 60 teachers of building subjects, from all parts of the country, have recently been in attendance at a course in London, organised by the Board of Education, for the dual purpose of taking "refresher" courses of lectures in certain subjects by well-known specialists and of conferring together on matters affecting their teaching work. The course, which is the fifth of its kind and is held annually, has extended over a fortnight, and its benefits to the teachers and through them, it is hoped, to a much wider circle can hardly be over-estimated. The courses of lectures have comprised "The Design of Buildings," by Mr. T. P. Bennett, F.R.I.B.A.; "Mechanics and Structures," by Mr. F. E. Drury, M.I.Struct.E., F.I.S.E.; and "General Building Science and Laboratory Work," by Mr. A. Everett, B.Sc. (Hons. Lond.). Separate lectures were also given by Sir Frank Baines, C.B.E., M.V.O., on the "Restoration of the Roof of Westminster Hall"; by Mr. C. G. Dobson, P.A.S.I., on "Building Accountancy"; by Dr. R. E. Stradling, M.C., Ph.D., A.M.Inst.C.E., on "Materials of Construction"; and by Mr. A. S. Barnes, H.M.I., on "The Evolution of Hand Tools." In addition there have been visits to places of technical interest such as the new buildings in Oxford-street for Messrs. Selfridge and Messrs. Peter Robinson, the research laboratories of the Building Research Board at Acton, the Royal Institute of British Architects, the Architectural Association Schools, and various museums.

One of the most important parts of the course has been the holding of two official conferences; one at the invitation of the Institute of Builders, to consider the recently devised scheme of examinations for admission to the Institute, and the other at the invitation of the Surveyors' Institution, to discuss the new standard form of quantities for building work. In both cases there is reason to hope that the frank interchange of views which took place will prove of permanent benefit to the industry as a whole, particularly as the teachers present represented the provinces to an extent which is usually difficult to obtain in London.

There can be no doubt as to the benefit of the course to teachers themselves; particularly to those who "plough a lonely furrow" in remote and thinly-populated districts. The sense of comradeship and solidarity and the broadening of views which resulted will be a help and inspiration to all who took part.

To Mr. Hugh Davies, H.M.I., who organised the course, to his colleague, Mr. J. L. Manson, H.M.I., who assisted him, and to the authorities of the Westminster Training College, who provided such excellent facilities for the course, the thanks of all concerned are due. It is to be hoped that the work of this course will, if possible, be extended in the future and that all who are interested in the provision of technical education in the building industry will appreciate the value of the work done.

Five firms of solicitors were concerned in the transfer of a piece of land, costing £135, at Ivinghoe (Bucks).

ENGLISH PLASTIC DECORATION.

AT the Department of Architecture, Surveying and Building, Northern Polytechnic Institute, recently, Mr. E. F. Jackson, of Messrs. G. Jackson & Sons, Ltd., Rathbone-place, London, gave a lecture on "English Plastic Decoration."

Dealing with the materials used in the past and at the present time, he said he would first of all deal with the stucco duro of the Italians (carbonate of lime) which was selected limestone, thoroughly well burnt and slaked for many years, well thumped together, beaten and chopped, and so toughened that it became quite flexible and very malleable; it was mixed with very finely ground Carrara marble dust, fine sand and various materials for fattening the stucco, for retarding the setting and regulating shrinkage and cracking, such as rye, dough, gluten of rice, plaster of Paris (sulphate of lime), fig juice, sugar or molasses. He now used dextrine, which was a sugary material to harden lime or plaster of Paris. To come to modern times, the Italians were the principal workers in stucco duro. A band of artists were trained by Raphael and carried out much stucco work in Italy and France, which could be seen to-day in the Vatican at Rome, many of the Italian palaces, and in many of the old palaces, châteaux and houses in France.

Almost the first stucco duro work in England was executed at Nonsuch Palace, and then at Longleat and Hardwicke Hall, by an English plasterer named Charles Williams, who had worked under the Italians, but owing to the difficulty of obtaining the marble dust and other ingredients, the use of stucco duro died out and the use of parge plaster became general in England in the late sixteenth and early seventeenth century. This was composed of very old lime, sharp sand, powdered tiles, cowdung, and ox-hair. It was very tenacious, tough and weatherproof, and with it the early timber-frame buildings of England were covered externally and internally.

The plasterers' work in England gradually developed, ceilings and friezes and cornices became richer and heavier in design, and the simple plain moulded ceiling rib widened into an enriched band with modelling between the containing mouldings. Those mouldings were run on the ceiling in stucco and later on in plaster of Paris, and the ornament was bedded in between the mouldings, shields, cartouches, sprays of flowers, &c., being inserted in the panels so formed by these bands. Then the ceilings and friezes of many well-known country houses were covered all over with a modelled entwining, a spiral growth of stem work of the vine, rose, laurel, and other forms of foliage, or else with grotesque figures, shields, flowers, or heraldic emblems. During the Elizabethan and Jacobean period the character of the modelled plaster work improved.

They now came to the time, after visits to Italy by Inigo Jones and visits to France by Christopher Wren, when plaster decoration became far more elaborate and much bolder in detail and altogether different in character. A great deal of work at that period was done by Italians assisted by English plasterers, and the use of Italian stucco duro was revived. Cornices were heavily moulded with leaf, and egg and tongue mouldings and modillion blocks. Friezes were executed with swags or laurel or oak leaves, and the ceilings were covered with wide bands and mouldings, forming ovals, circles, or square and oblong panels. Those bands were ornamented with elaborate fruits and flowers and leaves with entwining stems.

The use of the old stucco duro did not long survive, as it was found difficult and expensive to get the proper materials, and gradually ordinary stucco, viz., lime and hair and sand and plaster of Paris were again used, although the result was not so good, as it was impossible to obtain the same effect in this softer and less plastic material, or the same degree of hardness and durability and sharpness of edge on the leaf or flowers and thinness of substance which stucco duro was capable of taking and retaining. Following that elaborate phase of ornament a severer style of plaster work, but based on the same form of ornament, became general, fostered by Vanbrugh, Archer, Chambers, Hawksmore, Kent, Gibbs, &c. That work was more architectural in design and the ornamental work was not so free or undercut.

After referring to the period when the French work of the time of Louis XIV was badly copied in England, the lecturer said, stucco work had now fallen to its lowest ebb and practically came to an end, giving way to the rising school of the brothers Adam. That work was very delicate in design and was based on the antique. The material used by the brothers Adam for their ceilings, friezes and wall ornaments was a mixture of gypsum and fibre with a glutinous compound known as liardets preparation. Much work based on the antique and the Adam school was done in the following years by or under the direction of Paine, Richardson, Morris, Taylor and Holland and others; the details of the ornaments were perhaps not so delicate or refined, but much of the decorative work on the ceilings and panel mouldings was very good, and was being largely used and copied in the scheme of decoration at the present time. During the early Victorian period plaster work was very bad and consisted of nondescript details, mixed up with Greek ornament in the cornices, panel mouldings and ceilings. Plaster of Paris was much employed for casting these ornaments, but after the middle of the nineteenth century, the quality of the work commenced to improve and towards the end of the nineteenth century was again far more artistic, good work being done by many well-known plaster firms. That revival was principally owing to the introduction of fibrous plaster and gelatine moulds into England by the firm he was connected with.

The lecture was followed by a brief discussion. Mr. T. P. Bennett, F.R.I.B.A., thanked the lecturer.

The lecture was illustrated by some excellent cinematograph views of the manufacture of fibrous plaster, the films being taken in Mr. Jackson's works at Rathbone-place.

The Prince of Wales's Visit to Stone Quarries.

On the occasion of the recent tour of the West Country by the Prince of Wales, His Royal Highness visited the famous Ham Hill Stone Quarries in Somerset. Some typical examples of the finished product of the hill were displayed, noteworthy exhibits being some stonework for the new buildings of King's School, Sherborne, where extensions are being made to the school under the direction of the architect, Sir Reginald Blomfield, R.A. The Ham Hill stone is an oolite which derives its beautiful yellow colour from the iron it contains. This stone has been used in the building of practically all West country churches and mansions. At the entrance to the quarry the Prince was received by Colonel C. J. Trask, T.D., a director of the Ham Hill and Doulting Stone Co., who was presented to the Prince, as also was Mr. W. Trask (chairman of the directors) and Colonel F. N. Quantock-Shuldham. The Prince passed between machinery in motion and great blocks of stone, either finished or in the process of completion. His Royal Highness was escorted to a spot overlooking the quarry, which is of considerable depth. The Prince watched the men busy at work beneath him, while away on the far side a great crane was hoisting a huge block of stone to the surface. The Prince was greatly interested in all he saw and in the description which Colonel Trask gave him of the principal features of the stone. His Royal Highness asked many questions of those accompanying him—how long the particular quarry below him had been working, and the nature of the work done by the men.

THE RENT ACT: STATUTORY TENANTS.

THE case Felce *v.* Hill, which we noted in our issue for May 11 last, has been carried to the Court of Appeal, where the decision of the Court below has been affirmed. It raises a point we have frequently drawn attention to—the position of landlord and tenant under the Rent Act where the tenant holds over as a statutory tenant and the landlord continues to receive rent. The defendant in this case had been a tenant of the plaintiff under a three-years' agreement, which ended March 25, 1918. At the expiration of this term nothing had been said by either party, and the tenant remained in possession, paying the rent as before. On July 12, 1920, however, the landlord served upon her a notice of increase of rent, and this increase was duly paid. But on June 12, 1921, the landlord served a notice of further increase and as the tenant did not pay the first quarter's rent as increased, the landlord brought this action to recover it. In the action the tenant set up the defence that, after the expiration of the original term, she had become a tenant from year to year, and was entitled to six months' notice to determine this yearly tenancy, and, as no such notice had been given, she claimed to set off the amounts she had paid as increased rent since July 12, 1920. The plaintiff contended she was a statutory tenant under the Rent Act.

Now, apart from the Rent Act, if a tenant at the expiration of a term holds on with the landlord's consent, tacit or expressed, he holds on as a yearly tenant, and the inference may be drawn from the conduct of the parties that such a new agreement has been entered into, but the Court of Appeal held that the operation of the Rent Act prevented that inference from being drawn, for the tenant at the expiration of the original term became a statutory tenant, and was bound to pay the rent and could not be given notice. Therefore at the expiration of the term of three years she became a tenant on sufferance, or at most at will, and the landlord but for the Rent Act would have been entitled to obtain possession without giving any notice to quit. The judgment given for the plaintiffs in the County Court and Divisional Court was, therefore, affirmed.

The case is at present shortly reported as a head-note, and we notice the Court held that really the point was covered by the authority of Shuter *v.* Hersh (1922 1 K.B. 438; *The Builder*, July 28, 1922), and Newell *v.* Crayford Cottage Society (1922 1 K.B. 656; *The Builder*, April 28, 1922). As regards this latter case we shall have to see how the Court dealt with it when the case is fully reported, for, apart from dicta in the case, the decision was that in the case of a weekly tenancy an increase can only be demanded after notice to quit has been given, but Shuter *v.* Hersh decided that the receipt of rent from a statutory tenant does not waive a notice to quit or create a new tenancy.

So recently as July 20 we drew attention to the fact that Section 16 subsection (3) of the Act, which enacts that acceptance of rent by the landlord for a period not exceeding three months from the expiration of the notice to quit shall not be deemed to prejudice any right to possession, had not been applied in Shuter *v.* Hersh or any subsequent case, and it appears not to have been dealt with by the Court of Appeal in this case so far as the report at present shows. As we have explained before, this subsection was passed when the law was different from what it has since been decided to be, for at the time it was recommended by the Rent Commission it was then the law that receipt of rent even from a statutory tenant created a waiver (see Hartell *v.* Blackler, *The Builder*, July 20, 1920), but in the following year it was decided in Davies *v.* Bristow (*The Builder*, August 26, 1921) that receipt of rent from a statutory tenant could not be deemed to create a waiver and, since this latter decision, the subsection, instead of assisting landlords, has tended to cut down the effect of the latter decision and created difficulty.

RATES OF WAGES IN THE BUILDING TRADE.

The following are the rates of wages in the building trade in England and Wales. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Brick-layers.	Car-penters, Joiners.	Plas-terers.	Slaters.	Plum-bers.	Painters.	Brick-Masons' Labourers.	Plas-terers' Labourers.
Aberdare	1/7	1/7	1/7	1/7	1/7	1/7	1/7	1/2½	
Accrington	1/7	1/7	1/7	1/7	1/7	1/7	1/7	1/2½

THE LAW OF HIGHWAYS.*

The last edition of this standard work on highways appeared in 1911, and if in the twelve years that have elapsed much water has run under the bridges, it is equally true to say much traffic has run over the highways; and it is not only the quantity of that traffic which has increased in that period, but its quality has also entirely altered. The problem of our highways is a very serious one in consequence, and much attention will have to be given to this subject in the near future and thus this latest edition of a well-known treatise appears at a particularly opportune time. The law of highways has always been a complicated subject, but recent developments and numerous statutes have rendered the subject even more abstruse. This can be appreciated when we say that the present volume, apart from the tables of statutes, tables of cases, and index runs to 1,309 pages of clear but not very large print, but the authors have not neglected to extend that helping hand to the practitioner and reader—an excellent index—which also occupies 172 pages. That the law does not stand still while the traffic moves on is proved by the fact that the authors, in their preface, state that they have added more than 400 references to cases decided since the last edition went to press, and also over a hundred references to decisions delivered before that date. The work is divided into two parts—I, The law of highways considered independently of Statute law, and, II, Statutes relating to highways, main roads, streets, and bridges.

As regards recent legislation, the authors state that perhaps the most striking changes in the law have been the transfer of the powers relating to highways from the Local Government Board, first to the Minister of Health and finally to the Minister of Transport; the supersession by the Minister of Transport of the Road Board and the Light Railway Commissioners; and his acquisition of most of the Board of Trade's powers in relation to roads, bridges, and traffic. It is unnecessary to inform our readers that many of the subjects included in this treatise are of especial interest to them; buildings and highways are closely connected and the material statutes such as the Public Health Acts, the Private Streets Act, and the Locomotive and Highway Acts and other legislation are dealt with in these pages. In connection with the latter Act the authors in their preface point out that the law of "extraordinary traffic" has attained greater certainty and, of course, this is fully dealt with.

The subjects treated of seem to have been brought well up to date, for we find the decision we commented upon so recently as May 25 (The King *v.* Adams on licences for taking material for highways) included in the text, and, so far as we have tested it, the same may be said of other parts of the work. In our legal section (November 25, 1921), we drew attention to a point in connection with the case Macclesfield Corporation *v.* Macclesfield Grammar School, on what is a reasonable time to allow frontagers, called upon to make up a street under the Public Health Act, 1875. The learned judge in that case intimated that the time must be reasonable in connection with the work each frontager was called upon to do, and not, as has, we believe, usually been the view, a reasonable time for the performance of the job as a whole, and we pointed out that this was an extremely important point to frontagers, as it would prejudice them in the time allowed them for the work. This case is, of course, referred to in those pages, but the point we raised was that the dictum was not material to the actual decision where three months was held a reasonable time for the whole work, and the authors are more than justified in passing over an obiter dictum without comment.

We cannot pass from this work without quoting one further passage from the preface. "The old problem of how to accommodate the highways to increased and novel traffic, and to avoid the restriction of such traffic within present limitations, is with us in an urgent and intensified form. We observe in the spheres of politics and litigation the struggle between the often opposed interests of the State and local authority, the railway or canal company and the users of traffic. It is certain that during the next few years fresh legislation will be effected from time to time, and the law of highways will become an increasingly important, and, it is to be feared, an increasingly complicated subject." The state of our highways is in even a more confused state than the law relating to them, and the users of the highways cannot have their way made clear by any text book. The complication in the law can be faced therefore with comparative equanimity so long as text books like that we are reviewing are provided, erecting sign boards at every difficult corner, but the congestion of the traffic itself is an even more difficult problem. No recommendation of a standard work which is in its seventeenth edition is required, but we may say that there appears every reason to believe that the present edition will prove as useful as its many predecessors, and will be even more welcomed, as it is an exhaustive exposition of the law on a subject which every day is growing in public importance as the highway has now become the rejuvenated rival of the railway.

* "Pratt and Mackenzie's Law of Highways, being the Law of Highways, Main Roads, Streets, and Bridges." By Joshua Scholefield, K.C., and Archibald W. Cockburn, M.A., Barrister-at-Law. Seventeenth edition. (London: Butterworth & Co. 1923. 77s. 6d. net. Thin edition 8s. extra.)

NEW COMPANIES.

The particulars quoted below have been compiled by Messrs. Jordan & Sons, Ltd., Company Registration Agents, of 116 & 117, Chancery-lane, W.C. 2, from the documents available at the Companies' Registry.

M. Whiteley, Ltd. (191,390). Registered July 18, 129 and 131, Duddiston Mill-road, Birmingham. Tile fixers and slabbers, brick and tile manufacturers and merchants, builders' merchants and builders and contractors. Nominal capital, £1,000.

Froggatt & Prior, Ltd. (191,383). Registered July 18. 211, Broad-street, Birmingham. To acquire from William Froggatt and Henry Prior the business carried on by them at 211, Broad-street, Birmingham, of building contractors, heating, electrical, wireless and general engineers, sanitary and general plumbers, builders and repairers. Nominal capital, £1,000.

Butcher & Simpson, Ltd. (191,350). Registered July 17. 7, Cochrane-street, Wellington-place, St. John's Wood, N.W. 8. Builders and contractors, &c. Nominal capital, £1,000.

R. O. Arnold, Ltd. (191,363). Registered July 17. Prudential Chambers, Silver-street, Doncaster, York. Builders' merchants, builders and general contractors, &c. Nominal capital, £3,000.

Thos. Higson & Sons, Ltd. (191,269). Registered July 12. Byrom-street Saw Mills, Blackburn. Builders and contractors and all allied trades. Nominal capital, £2,500.

Hartley's (Castleford), Ltd. (191,291). Registered July 13. County Chambers, Castleford, York. Brick and tile, stoneware and earthenware manufacturers, now carried on by Charles Ibbotson Hartley, and Joshua Hartley, at Castleford, Whitwood Mere and Cawood, all in the County of York, under the style of Joshua Hartley & Co. Nominal capital, £40,000.

Guildford and District Guild of Builders, Ltd. (191,248). Registered July 11. To carry on the business of builders and contractors, &c. Nominal capital, £500.

North-East Building Traders' Protection Society, Ltd. (191,571). Registered July 26. 16A, Grainger-street, Newcastle-on-Tyne. To protect the mercantile interests of persons, firms, companies and corporations engaged in the business of builders' merchants. Nominal capital, £100.

198,896.—J. G. Zwicker: Apparatus for moulding pipe sections.

TRADE NEWS.

Messrs. Fenlon & Son, of 8, Tudor-street, E.C., have issued an illustrated pamphlet giving their latest list of geysers. The illustration shows the "C.C. Fleet" geyser, a high-grade geyser with closed chamber and detachable interior for cleaning or repair. This, it is

claimed, has been found to meet the demand for an efficient low-priced geyser. The heated water is fit for drinking. The Geyser, which we illustrate, is made of stout, hardened copper (including condensation trough), interior tinned, exterior polished and lacquered.

Messrs. Luckwood & Kesterton, Sentinel House, Southampton-row, W.C.1, have recently opened a builders' merchants business for the supply of all general ironmongery, hardware sanitary goods, cast iron baths, &c.

Mr. Frederick Parker has removed to Viaduct Works, Catherine-street (extension), Leicester, where he has larger and more commodious premises.

NEW BUILDINGS IN SCOTLAND.

Aberdeen.—Hospital Scheme.—At a meeting of the Royal Hospital for Sick Children it was stated that Mr. and Mrs. Herbert Taylor, of Rhu-na-Haven, Aboyne, had offered to pay for the site allocated to the hospital, provided the new scheme is proceeded with in a reasonable time. The estimated cost of the site at Foresterhill and Burnside is £5,550.

Glasgow.—Various.—At the last meeting of the Dean of Guild Court plans for new buildings at the corner of Trongate and Stockwell-street, for the Corporation, were deferred for further consideration. The estimated cost of the buildings was £190,000. The following plans were approved:—The Corporation Housing Department, streets and sewers at Hamilton-hill; MacFarlane, Lang & Co., 38, Wesleyan-street, additions to biscuit factory, Clydeford-drive, Tollcross, at £23,000; the Govan Ropework Co., Ltd., Helen-street, Govan, additions to work on the west side of Helen-street; the Rev. William Ogg and other, trustees of Mount Florida United Free Church, a church hall at the church, Cathcart-road and Hampden-street; Dallas's, Ltd., Milton House, 160–174, Cowcaddens-street, additions to property at Cowcaddens-street; James Craig (Glasgow), Ltd., 10–38, Woodlands-road, alterations to premises at 123–127, Sauchiehall-street; and Brown & Adam, Ltd., Riverbank Works, Pollokshaws, additions to works at Riverford-road, Pollokshaws.

Prestonpans.—School.—East Lothian Education Authority decided to build a new secondary school at Preston Lodge, Prestonpans.

Edinburgh.—Library Alterations.—The Corporation Public Library Committee has asked the City Architect to obtain tenders for the alterations necessary for installing the open access system in the Central Library.

Buckie.—Houses and Shops.—The T.C. has passed plans for a house and shops at Baron-street for Mr. C. Forbes, baker, and a store in Baron-street, for Mr. A. Grant, carting contractor.

Dumfries.—Houses.—The foundation stone of the municipal houses at Cresswell has been formally laid. This scheme is the first in Scotland on which building operations have actually been started under the new Housing Act.

Edinburgh.—Various.—At the last meeting of the Dean of Guild Court a warrant was granted to the city for the reconstruction of the flooring in the Synod Hall and the erection of tip-up seats. The flooring will be graded from back to front and the seats arranged in semi-circular rows. The cost will be £8,000. Warrants were also granted for the conversion of houses at Merchiston-avenue and Glencairn-crescent, while the erection of a cottage at Pinkhill and semi-detached houses at Riselaw-crescent and Ravelston Dykes were also approved. The North British Cold Storage and Ice Company, Leith, received a warrant to erect an additional story to their building for offices.

Aberdeen.—Schools, &c.—The T.C. Plans Committee have passed nineteen plans, at an estimated value of £11,000. These included plans for Aberdeen Grammar School former pupils' memorial pavilion at Harlaw-road, at an estimated cost of between £4,000 and £5,000. Six plans were for garages and two for bungalows.

Portobello.—Tramways.—The Tramway Committee recommends the Edinburgh Corporation to lay down electric tramways between Seafield, Leith and Portobello.

Housing Subsidy for Builders.

The Rhondda U.D.C. has decided to encourage building by local enterprise by granting a subsidy of £100 per house to builders subject to satisfactory safeguards being arranged to ensure that any subsidy so paid would be applied in reducing ultimate cost of the house so as to enable it to be sold or let on an economic and self-supporting basis.
